About the Pacific Institute

The Pacific Institute is one of the world's leading nonprofit research and policy organizations working to create a healthier planet and sustainable communities. Based in Oakland, California, we conduct interdisciplinary research and partner with stakeholders to produce solutions that advance environmental protection, economic development, and social equity – in California, nationally, and internationally. We work to change policy and find real-world solutions to problems like water shortages, habitat destruction, global warming, and environmental injustice. Since our founding in 1987, the Pacific Institute has become a locus for independent, innovative thinking that cuts across traditional areas of study, helping us make connections and bring opposing groups together. The result is effective, actionable solutions addressing issues in the fields of freshwater resources, climate change, environmental justice, and globalization. More information about the Institute and our staff, directors, funders, and programs can be found at www.pacinst.org.

About the Authors

Julian Fulton

Julian Fulton is a Ph.D. candidate in the Energy and Resources Group at the University of California at Berkeley and a research affiliate with the Pacific Institute Water Program. His interests lie in the relationships between water use and economic development, focusing on modeling and governance. Mr. Fulton's previous research includes water use in the transportation sector, conservation strategies among California utilities, and European flood management policy. He recently completed a Fulbright Fellowship in the Netherlands and holds an M.S. in Civil and Environmental Engineering and a B.A. in International Development Studies from the University of California at Berkeley.

Heather Cooley

Heather Cooley is the co-director of the Pacific Institute Water Program. She conducts and oversees research on an array of water issues, such as the connections between water and energy, sustainable water use and management, and the hydrologic impacts of climate change. Ms. Cooley has authored numerous scientific papers and co-authored five books, including *The World's Water, A Twenty-First Century U.S. Water Policy*, and *The Water-Energy Nexus in the American West*. Ms. Cooley is a recipient of the Environmental Protection Agency's Award for Outstanding Achievement and serves on the Board of Directors of the California Urban Water Conservation Council. She also serves on the California Commercial, Industrial, and Institutional Task Force. Ms. Cooley received a B.S. in Molecular Environmental Biology and an M.S. in Energy and Resources from the University of California at Berkeley.

Peter H. Gleick

Peter Gleick is co-founder and president of the Pacific Institute. He works on the hydrologic impacts of climate change, sustainable water use, planning and policy, and international conflicts over water resources. Dr. Gleick received a B.S. from Yale University and an M.S. and Ph.D. from the University of California at Berkeley. He is the recipient of the MacArthur Fellowship, an Academician of the International Water Academy, a member of the U.S. National Academy of Sciences, and is the author of many scientific papers and books, including the biennial water report *The World's Water, Bottled and Sold: The Story Behind Our Obsession with Bottled Water*, and *A Twenty-First Century U.S. Water Policy*.

Acknowledgements

We would like to thank all those who have offered ideas, guidance, data, information, and comments on the report, including Ashok Chapagain and Stuart Orr of WWF; Kent Frame, Kamyar Guivetchi, Rich Juricich, Abdul Khan, Morteza Orang, and Jim Rich of the California Department of Water Resources; Vance Fong and Don Hodge of the United States Environmental Protection Agency; Richard Norgaard of the University of California at Berkeley; Fraser Shilling of the University of California at Davis; and Bob Cox of the University of Arkansas. This work was supported by funding from the Pacific Institute Water and Sustainability Program.

Table of Contents

Executive Summary	1
Introduction.....	6
A Note about Water Use	6
What is a Water Footprint?	7
Dimensions of California's Water Footprint	8
Methods and Data Sources.....	11
The Water Footprint of Goods and Services Produced in California	12
Water Footprint of Goods Produced Outside of California	14
Trade	14
Limitations	15
Results.....	16
California's Water Footprint.....	16
California's Internal Water Footprint	18
California's External Water Footprint	22
Economic Values of Water Footprint Components	25
Grey Water Footprint.....	26
Next Steps.....	27
Conclusions.....	28
References.....	29

* Appendices 1-4 are available online at www.pacinst.org/reports/ca_water_footprint

Figures

Figure 1. Trends in California's Population, Freshwater Withdrawals, and State-Level GDP	9
Figure 2. Trends in California's International and Domestic Trade	10
Figure 3. California's Water Footprint Accounting Framework	11
Figure 4. California's Blue and Green Water Footprint, by Component.....	16
Figure 5. California's Blue and Green Water Footprint, by Water Type	17
Figure 6. Blue and Green Water Footprints of Goods and Services Produced in California, in Million Acre-Feet per Year.....	18
Figure 7. Blue and Green Water Footprints of Goods and Services Produced in California, by Product	19
Figure 8. Blue and Green Water Footprints of Goods Produced in California and Exported, in Million Acre-Feet.....	19
Figure 9. Blue and Green Water Footprints of Goods Produced in California and Exported, by Destination	20
Figure 10. Blue and Green Water Footprints of Goods Produced in California and Exported Domestically	21
Figure 11. Blue and Green Water Footprints of Goods Produced in California and Exported Internationally	21
Figure 12. Blue and Green Water Footprints of Goods Produced Outside of California and Imported, in Million Acre-Feet per Year	22
Figure 13. Blue and Green Water Footprints of Products Produced Outside of California and Imported, by Origin	23
