## ABOUT THE PACIFIC INSTITUTE

The Pacific Institute envisions a world in which society, the economy, and the environment have the water they need to thrive now and in the future. In pursuit of this vision, the Pacific Institute creates and advances solutions to the world's most pressing water challenges, such as unsustainable water management and use, climate change, environmental degradation, food, fiber, and energy production, and basic lack of access to fresh water and sanitation.

Since 1987, the Pacific Institute has cut across traditional areas of study and actively collaborated with a diverse set of stakeholders, including leading policy makers, scientists, corporate leaders, international organizations such as the United Nations, advocacy groups, and local communities. This interdisciplinary and independent approach helps bring diverse groups together to forge effective real-world solutions.

More information about the Pacific Institute and its staff, board of directors, and programs can be found at [www.pacinst.org](http://www.pacinst.org).

## ABOUT THE AUTHORS

### MATTHEW HEBERGER

Matthew Heberger is a senior research associate in the Pacific Institute's Water Program, where he conducts research on water resources policy, planning, and management. In the last 18 years he has worked on water issues as a hygiene and sanitation educator in West Africa, consulting engineer, and policy analyst in Washington, D.C., and in California. Matthew holds a B.S. in Agricultural and Biological Engineering from Cornell University and received a master's degree in Water Resources Engineering from Tufts University.

### KRISTINA DONNELLY

Kristina Donnelly is a Research Associate with the Water Program. Kristina works primarily on U.S. water governance and policy. Prior to joining the Institute, Kristina worked for the Arava Institute for Environmental Studies, conducting transboundary water research and organizing educational programs for students and professionals. Before that, she was selected as the 2008/09 Sea Grant Fellow with the Great Lakes Commission in Ann Arbor, Michigan. Kristina received a B.S. in Mathematics from American University and a M.S. in Natural Resources and Environment from the University of Michigan.

## ACKNOWLEDGMENTS

This research was generously supported by the TomKat Charitable Trust. We thank the many people who offered their time, experience, data, and comments in the preparation and review process, including David Ansolabehere, Juliet Christian-Smith, Heather Cooley, Laura Feinstein, Tom Frantz, Peter Gleick, Armando Gonzalez, Andrew Grinberg, Dale Harvey, Ronald Holcomb, Jim Robinson, Clay Rodgers, Linsey Shariq, Seth Shonkoff, Will Stringfellow, and Kimberly Taylor. All conclusions, and any errors, are, of course, our own.

# Contents

Executive Summary .....	1
Introduction.....	8
Oil and Gas Production On and Near California’s Agricultural Lands.....	9
Water Use for Oil and Gas Production .....	12
Box 1. Competition for Land .....	13
Competition with Agriculture for Water.....	15
Wastewater Management and Disposal.....	16
Soil and Water Contamination .....	18
Risks from Soil and Water Contamination .....	19
Potential Impacts on Crops .....	19
Potential Impacts on Livestock .....	20
Pathways of Contamination.....	21
Unlined Percolation Pits.....	22
Underground Injection of Wastewater.....	24
Idle and Orphan Wells.....	28
Accidental Spills and Leaks, and Illicit Discharges.....	29
Threat from Groundwater Overdraft and Land Subsidence .....	30
Legacy Pollution from Drilling Mud Disposal.....	30
Beneficial Reuse of Oil-field Wastewater .....	31
Potential Risks from Beneficial Reuse .....	35
Potential Contamination of Crops .....	36
Marketing and Public Perceptions of Agricultural Products .....	38
Rules and Regulations Governing the Reuse of Oil-field Wastewater.....	39
Potential Risks to Farmworkers .....	41
Box 2. Reuse of Treated Sewage for Irrigation .....	42
Findings and Recommendations.....	44
Conclusion.....	48
References .....	50

**FIGURES**

Figure 1. California crude oil production (million barrels).....	8
Figure 2. Active oil and gas wells in California. ....	10
Figure 3. Oil production facility and unlined percolation pit in Kern County with orchards downhill a short distance away. ....	11
Figure 4. More oil and gas wells are being drilled outside of established fields (administrative field boundaries).....	14
Figure 5. Volume of produced water from oil and gas production in California from 1977 to 2014, by disposal method. ....	17
Figure 6. Cattle in Kern County drinking from a seep approximately 300 feet downhill from percolation ponds where oil-field-produced water is disposed. ....	20
Figure 7. Locations of oil and gas wastewater “evaporation-percolation pits” in California. ....	23
Figure 8. Schematic of underground injection wells for disposal of oil and gas wastes and for enhanced oil recovery. ....	25
Figure 9. Location of disposal wells for oil and gas wastes in the San Joaquin Valley, including wells recently identified as a potential threat to underground sources of drinking water. ....	27
Figure 10. Warning sign for fishermen on San Francisco Bay. ....	43

**TABLES**

Table 1. Proximity of active oil and gas wells to cropland in the San Joaquin Valley and Southern California. ....	12
Table 2. Oil and gas wastewater disposal in California in 2013. ....	18
Table 3. Projects where oil-field wastewater is permitted for reuse for crop irrigation in California.....	32
Table 4. Produced water volume in major oil-producing counties in California compared to water use for other purposes. ....	35
Table 5. Discharge limits and sampling required by the water board for Chevron’s discharge of water to the Cawelo Water District.....	40
