About the **Pacific Institute**

The Pacific Institute is one of the world’s leading nonprofit research and policy organizations working to create a healthier planet and sustainable communities. Based in Oakland, California, we conduct interdisciplinary research and partner with stakeholders to produce solutions that advance environmental protection, economic development, and social equity – in California, nationally, and internationally. We work to change policy and find real-world solutions to problems like water shortages, habitat destruction, climate change, and environmental injustice. Since our founding in 1987, the Pacific Institute has become a locus for independent, innovative thinking that cuts across traditional areas of study, helping us make connections and bring opposing groups together. The result is effective, actionable solutions addressing issues in the fields of freshwater resources, climate change, environmental justice, and globalization. More information about the Institute and our staff, directors, funders, and programs can be found at www.pacinst.org.

About the **Authors**

Kristina Donnelly

Kristina Donnelly is a research associate with the Pacific Institute Water Program. Her research interests include the social, economic, and policy aspects of water conservation; conflict and conflict resolution/management over transboundary water resources; low-impact development and green infrastructure policy and planning; and water policy and economics. Prior to joining the institute, Ms. Donnelly was the 2008/09 Sea Grant Fellow with the Great Lakes Commission in Ann Arbor, Michigan and then worked on transboundary water research and educational opportunities for Israelis, Jordanians, Palestinians, and other nationalities at the Arava Institute for Environmental Studies in southern Israel. Ms. Donnelly received a B.S. in Mathematics from American University and an M.S. in Natural Resources and Environment from the University of Michigan.

Dr. Juliet Christian-Smith

Dr. Juliet Christian-Smith is a senior research associate at the Pacific Institute and the lead author of several Institute reports and the book *A Twenty-First Century U.S. Water Policy*. Her interests include sustainable water management, comparative analyses of water governance structures, and climate change adaptation and mitigation. She is currently an Editor of *Sustainability Science* and a Steering Committee Member of the California Roundtable on Water and Food Supply. In 2009, she received the Environmental Protection Agency’s Outstanding Achievement Award, along with colleagues Heather Cooley and Dr. Peter Gleick, for the Pacific Institute’s work on agricultural water use in California. Prior to coming to the Institute, she was on a Fulbright Fellowship studying the implementation of the European Union Water Framework Directive. Dr. Christian-Smith holds a Ph.D. in Environmental Science, Policy and Management from the University of California at Berkeley and a B.A. in Biology from Smith College.

Acknowledgements

We gratefully acknowledge the S.D. Bechtel Jr. Foundation’s funding and support for this white paper series. The views and opinions contained within are those of the authors and are not necessarily the views or opinions of the Foundation. We would like to thank the valuable comments and recommendations provided by individual reviewers, including Steve Nugent, Chu Thai, Kelly Winsor, and Heather Cooley, along with our project advisory committee including Richard Lou, Jeffrey Hughes, Mary Ann Dickinson, and David Sunding. All errors and omissions are, of course, our own.

Table of Contents

Introduction	1
The New Normal	2
Increasing Costs	2
Deteriorating Infrastructure	2
Stricter Standards	4
Climate Change and Extreme Weather Events	5
Decreasing Demand	5
The Economy	5
Conservation and Efficiency	5
What this Means for Water Rates	5
Water Rate Basics	7
Flat Rate or Flat Fee	7
Uniform Volumetric Rate	8
Block or Tiered Rate	8
Changing Rate Structures in California	10
Rate Designs: Advantages and Disadvantages	11
References	15

Tables and Figures

Table 1. Cost of Water in California	6
Table 2. Comparison of Rate Structures	13
Figure 1. Importance of Industry Issues	2
Figure 2. Customer Understanding of the Gap between Water Cost and Water Price	6
Figure 3. Total Price versus Consumption Volume for Flat Rates	8
Figure 4. Unit Price versus Consumption Volume for Uniform Rates	8
Figure 5: Total Price versus Consumption Volume for Uniform Rates	8
Figure 6. Unit Price versus Consumption Volume for Decreasing Blocks and Increasing Blocks	9
Figure 7. Total Price versus Consumption Volume for Decreasing Blocks and Increasing Blocks	9
Figure 8. Trends in Water Rate Structures between 1991 and 2006	10
