USBR and DWR staff members who negotiated the Coordinated Operation Agreement (COA), seated from left: C. Dale Duvall, David G. Houston, David N. Kennedy, Gordon K. Van Vleck. Second row from left: James Turner, John Budd, Brenda Washington, David Lindgren, Robert James, Rita Singer. Back row, from left: Robert Moore, Michael Cowan, Harold Meyers, James Moore, Jerry Vayder, Charles Shoemaker, William Mierke, Lawrence Mullnix, Gerald Cox, Katherine Striemer, and Russell Kletzing.

FOREWORD

This edition of the Bulletin 132 series is the twenty-fifth annual summary of the State Water Project's operation and management. Bulletin 132-87 reviews Project operations during calendar year 1986 and describes other management activities, emphasizing the period between July 1, 1986 and June 30, 1987. Outlooks for present and future (1) water supplies, (2) power supplies, and (3) Project costs and financing are presented in the bulletin as well. As usual, Appendix B presents information supporting the water contractors' Statements of Charges for the coming year (1988).

A handwritten signature in black ink, appearing to read "David N. Kennedy", with a stylized flourish at the end.

The California Water Commission serves as a policy advisory body to the Director of Water Resources on all California water resources matters. The nine-member citizen commission provides a water resources forum for the people of the State, acts as a liaison between the legislative and executive branches of State Government, and coordinates federal, state, and local water resources efforts.

ORGANIZATION OF THE DEPARTMENT OF WATER RESOURCES

ABBREVIATIONS

In general, the use of abbreviations in this bulletin follows the practice of spelling out a term in full at its first use in each chapter or major section, followed by the abbreviated form in parentheses. The following names and terms in common use throughout the bulletin are not defined separately:

cfs	cubic feet per second
CVP	Central Valley Project
DWR	Department of Water Resources
EIR	Environmental Impact Report (State)
EIS	Environmental Impact Statement (Federal)
kW	kilowatt
kWh	kilowatthour
kV	kilovolt
MW	megawatt
MWDSC	The Metropolitan Water District of Southern California
OMP&R	operation, maintenance, power, and replacement
SWP	State Water Project
SWRCB	State Water Resources Control Board
USBR	United States Bureau of Reclamation

CHAPTER I

OVERVIEW OF THE CALIFORNIA STATE WATER PROJECT

Bulletin 132-87 marks the 25th in an ongoing series of Bulletin 132 reports on "Management of the California State Water Project." The first bulletin in this series was published in 1963. Over the past 25 years the report has provided a continuing history of State Water Project (SWP) administration activities, water and power operations, financing plans, and management plans. Appendix B, which is bound within each bulletin, has provided the documentation of costs and water charge information for the annual State-ments of Charges to long-term water supply contractors.

Bulletin 132-87 summarizes DWR's activities for the past year and presents plans for future years. The first four chapters in Bulletin 132-87 deal with SWP history, 1986 operations, administration activities, and design and construction. Analyses of present and future water and power supplies appear in Chapters V and VI, respectively. Chapter VII outlines future costs and financing. Profiles of six SWP long-term water contractors are in Chapter VIII. Appendix B, documenting computation of contractor water charges for 1988, forms the latter portion of this bulletin.

The State Water Project

Investigating California's water resources, planning for its water problems, and development of its water resources have been a major part of California history.

Efforts to control California's water began with the white settlers. These people constructed the first irrigation systems for use during California's dry summer seasons and began the procedures of acquiring legal rights for the use of water in natural streams and water courses within the State. Since those early days, Californians have constantly worked to develop ways to manage and control its precious resource.

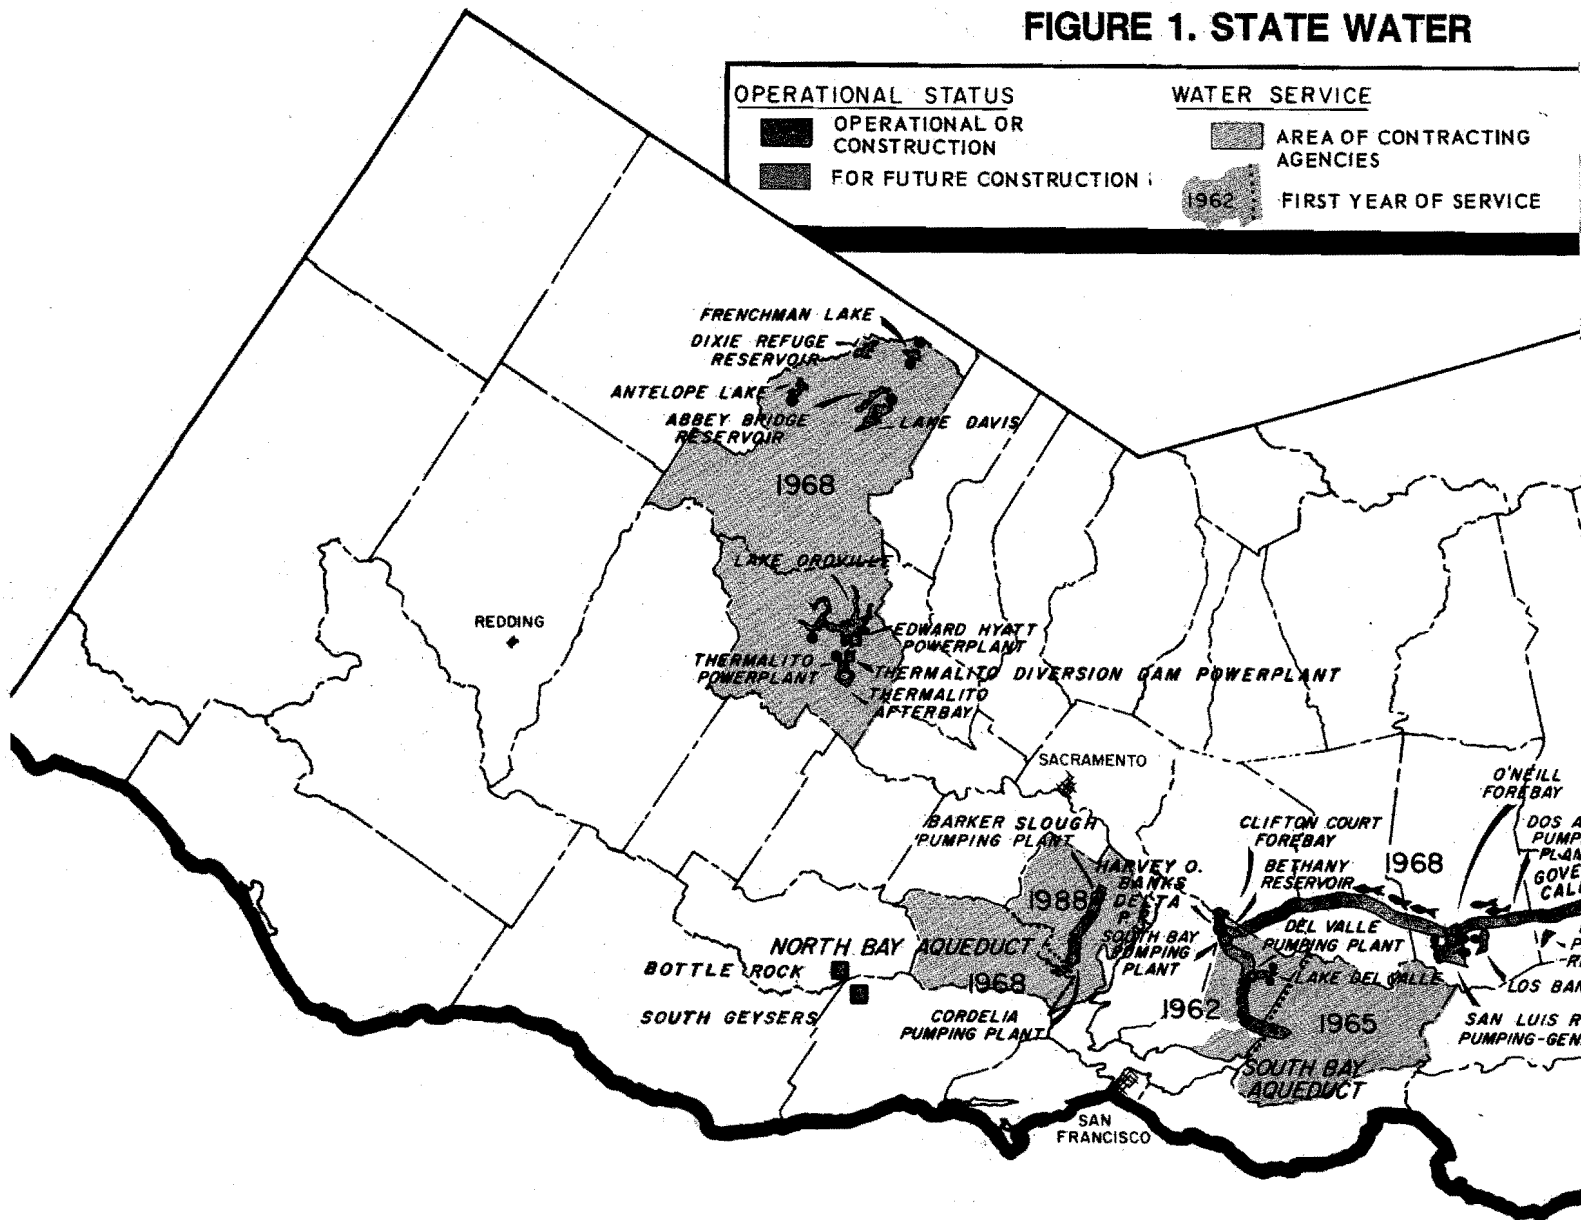

Initial planning for comprehensive development of California's water resources began in the 1870s. At that time, a commission appointed by President Grant investigated the water resources in the Central Valley. A report by that commission discussed plans for utilizing the water supply of the Sierra Nevada and pointed to the responsibility of the federal and State governments to provide guidance, direction, and leadership in developing California water supplies. Not long after the report was published, the State began its first comprehensive investigation of California water resources.

The Marshall Plan, proposed in 1919, was one of the earliest comprehensive plans for a statewide water conveyance system. This plan proposed delivering water from the Sacramento River for irrigation to the Sacramento-San Joaquin valleys through large canals. The Plan failed to attract large scale, statewide support. The Marshall Plan was followed by a series of statewide water resources investigations during the 1920s.

In 1931, State Engineer Edward Hyatt presented a State Water Plan to the Legislature. This plan, which had been in development for 10 years, addressed some of the State's most crucial water problems, and provided for water exchange between the north and south portions of the Central Valley. By 1933, the plan evolved into the Central Valley Project (CVP). Because of the Depression, State funding was not readily available, the federal government assumed financial responsibility for the project.

After World War II, California experienced great urban and industrial growth as well as a corresponding increase in water demand. In 1951, State Engineer A. D. Edmonston presented an outline of the Feather River Project to the Legislature. This proposal included a multipurpose dam and reservoir on the Feather River near Oroville, a Delta Cross Channel, an electrical transmission system, an aqueduct system to transport Sacramento-San Joaquin Delta

a) Under full development.
b) Pumped storage capability used only under economically favorable conditions.
c) Tentative data for future facility.
d) Includes spare unit; data for spare unit is excluded from total design flow but included in total motor rating.

water to Santa Clara and Alameda counties, and an aqueduct to transport water from the Delta to the San Joaquin Valley and to southern California. This report marked the beginning of today's State Water Project.

In 1957, the Department of Water Resources (reorganized from the Division of Water Resources in the Department of Public Works during 1956) released Bulletin No. 3, "The California Water Plan." This bulletin presented the preliminary plans for the full, practical development of all the State's water resources to meet its ultimate water needs. The bulletin also included plans for local water resource development along with those works needed for major water transfer system.

In 1959, the Legislature passed the California Water Resources Development Bond Act, known as the Burns-Porter Act. This legislation provided the major financing for the State Water Project.

The next year was a pivotal one for the SWP. In 1960, California's voters approved a \$1.75 billion bond issue under the Burns-Porter Act, and initial State Water Project construction began.

SWP Water Supply Contracts

In January 1960, then Governor Edmund G. Brown, Sr., announced the "Statement of Contracting Principles for Water Service Contracts" (Contracting Principles). The Contracting Principles specified how the SWP costs were to be allocated and how rates for water were to be developed. The State Water Project was to be a multipurpose project with project beneficiaries paying their allocated costs.

The initial water supply contract was signed with The Metropolitan Water District of Southern California, on November 4, 1960. This was the prototype of all other SWP water supply contracts. Following the MWDSC contract signing, an extensive water contracting program began. During the early 1960s, applications were received from a large number of agencies interested in a long-term water supply from the SWP.

Before executing each water supply contract, DWR evaluated each application on the basis of:

- o future demand for supplemental water;
- o the legal ability to contract with the State, to make ad valorem assessments, and to contract to supply water to member units;
- o engineering feasibility of providing water;
- o economic justification of providing water; and
- o ability of the agency/area to reimburse the State.

The major portion of the contracting program for SWP water supply occurred between 1961 and 1965. In all, 30 agencies signed long-term contracts for water supply from the SWP.

Extensive SWP construction occurred between 1960 and 1972 with efforts to complete the initial Project facilities. These facilities included Oroville and San Luis dams and reservoirs (needed to conserve and store water), a South Bay Aqueduct to Alameda and Santa Clara counties, and a 444-mile aqueduct from the vicinity of the Sacramento-San Joaquin Delta to Perris Reservoir in Southern California. As construction in certain areas was finished, water delivery began. Initial water deliveries to the South Bay contractors occurred in 1962. In 1968, water contractors in the San Joaquin Valley received their first water deliveries and finally in 1972, deliveries were made to Southern California water contractors.

SWP Service Areas

The 30 long-term water supply contractors vary widely in size, location, climate, and prosperity. Their needs for SWP water also differ. In the San Joaquin Valley, SWP water is mostly needed for irrigation and agriculture uses, while in the San Francisco South Bay area, North Bay area, and in Southern California, water is needed for urban, municipal uses.

Chapter VIII of this bulletin includes a profile of six SWP contractors. Profiles of the remaining 24 contractors have been published in previous bulletins beginning with Bulletin 132-83. The profiles give infor-

mation about each contractor including the agency's needs and uses of its SWP water supply.

Figure 2 shows the boundaries for each SWP water supply contractor. Together they constitute about 24 percent of the State's area and contain approximately 67 percent of the State's population. Since the first SWP water delivery to the South Bay in 1962, cumulative water deliveries to all contractors have totaled about 28,129,000 acre-feet.

SWP Accomplishments

The primary purpose of the SWP is to transport water from areas of abundance and deliver water to areas of need for agricultural and municipal and industrial use. Water deliveries totaled 2,229,727 acre-feet in 1986; entitlement deliveries equaled 1,995,636 acre-feet and other deliveries equaled 234,091 acre-feet. Table 1 shows a summary of SWP water deliveries since 1962. The table also summarizes recreation and hydroelectric energy generation accomplishments through 1986.

Another project purpose is flood control. Although figures for flood control accomplishments are not reflected in Table 1, Oroville Dam alone has prevented millions of dollars of property damage in 1964, 1967-68, 1970, 1974, 1982-83, and 1986. In 1986, flooding was also controlled in the San Joaquin Valley by diverting floodwater into the California Aqueduct through the Kern River Intertie.

Recreation and fish and wildlife enhancement is another project purposes. SWP reservoirs also double as recreational lakes with swimming, camping, fishing, and boating facilities available.

Highlights

- o Design and construction of the East Branch enlargement progressed steadily. Construction work, which began in 1986, includes enlarging the canal from Pearblossom Pumping Plant to Mojave Siphon, installing additional barrels at 15 siphons, installing additional pumping units at Pearblossom

Pumping Plant, and installing additional turbine-generator units at Devil Canyon Powerplant.

- o Construction of the North Bay Aqueduct, Phase II facilities continues on schedule. The new facilities include a pumping plant at Barker Slough, a 23-mile long pipeline from the pumping plant to the vicinity of Cordelia, and a pumping plant at Cordelia. Water pumped at Cordelia will enter a pipeline to be transported to the terminus in Napa County. Operation of Phase II facilities is scheduled for late 1987.
- o MCI will have completed installation and system testing of DWR's fiber optic cable communications system by late 1987. The new fiber optics system is to replace the old SWP copper wire communication system and is needed to more efficiently control operation of the SWP aqueduct, power and pumping plants.
- o The 1985-86 water year was a "wet" year. A series of massive storms in February 1986 recorded precipitation at 268 percent of normal for the month. February's storms were the major contribution to the overall statewide average of 134 percent of normal precipitation.
- o Runoff to Lake Oroville and Shasta Lake was well above average for the year. Lake Oroville recorded 152 percent of average and Shasta Lake registered 131 percent of average.
- o Spring storage in Lake Oroville reached a maximum of 94.5 percent of normal, or approximately 3.33 million acre-feet. San Luis Reservoir storage peaked at 2.03 million acre-feet in early 1986 and ended the year with storage at approximately 94.5 percent of normal. Total reservoir storage at SWP facilities increased by 667,000 acre-feet during 1986.
- o The Kern River Intertie delivered 17,467 acre-feet of excess San Joaquin Valley floodwater into the California Aqueduct in 1986.

- a) All water delivered to long-term SWP contractors, including current and deferred entitlement, surplus, unscheduled, emergency relief, exchange, and non-SWP water delivered through SWP facilities to Napa County FC&WCD.
- b) Statutes of 1978, Chapter 1207, added Section 135 to the Revenue and Taxation Code, requiring assessment at 100 percent of full value for the 1981-82 fiscal year and fiscal years thereafter.
- c) Total for all of Plumas County Flood Control and Water Conservation District, including Lost Chance Creek Water District.
- d) Total for all of Kings County, including the following contracting agencies: County of Kings, Dudley Ridge Water District, Empire West Side Irrigation District, nearly all of Tulare Lake Basin Water Storage District, and about 40 percent of Devil's Den Water District.
- e) Assessed valuation not available on an agency area breakdown.
- f) Total for all of Kern County, including the following contracting agencies: Kern County Water Agency, about 60 percent of Devil's Den Water District, and about 50 percent of Antelope Valley-East Kern Water Agency.
- g) Includes 1,703 acre-feet of emergency relief water transferred to Tulare Lake Basin Water Storage District from Kern County Water Agency.
- h) Total for MWDSC including Calleguas Municipal Water District, which is common to MWDSC and Ventura County Flood Control District.
- i) Total for all of Ventura County, including the following contracting agencies: Ventura County Flood Control District and portions of Antelope Valley-East Kern Water Agency, Castaic Lake Water Agency, and MWDSC.
- j) Includes duplicate values. Some areas that are within two or more agencies are included in each agency's total.
- k) Excludes duplicate values where agencies have overlapping boundaries.

TABLE 1. SWP ACCOMPLISHMENTS THROUGH 1986

- a) Includes preconsolidation repayment water, emergency relief water, regulated delivery of local supply, non-SWP water delivered to Napa County FC&NCD through SWP facilities, conveyance of CVP water (including Decision 1485 water), recreation water, and demonstration ground water fill withdrawal.
- b) A recreation day is the visit of one person to a recreation area for any part of one day.
- c) Includes SWP share of generation from Hyatt-Thermalito, San Luis, Devil Canyon, Warner, Alamo, and Castaic power plants.
- d) In addition, SWP dams have prevented millions of dollars worth of flood damage.
- e) Revised and corrected from Bulletin 132-85 to reflect reclassification of 2,349 acre-feet of Kern County Water Agency entitlement water from agricultural water to municipal and industrial water, delivered at Reach 11B.
- f) Revised and corrected from Bulletin 132-86 to reflect a reduction of 5,662 acre-feet of entitlement related water to MWDSC.
- g) Revised and corrected from Bulletin 132-86 to reflect 5,662 acre-feet of 1978 exchange water reclassified from other water to agricultural surplus water.
- h) Revised and corrected from Bulletins 132-85 and 132-86 to reflect entitlement water deliveries to the City of Yuba City.

- o SWP entitlement water deliveries totaled 1,995,636 acre-feet in 1986. This was the second highest year on record.
- o SWP conveyed 141,456 acre-feet of CVP water through Project facilities.
- o DWR sold 3.48 billion kWh of excess energy for \$68.37 million in 1986. The energy was not needed for SWP pumping.
- o DWR and the Department of Fish and Game signed the Delta fish protection agreement on December 30, 1986. This agreement provides measures to offset direct losses of fish caused by SWP operation of the Banks Delta Pumping Plant. This agreement also clears the way for the instal-

lation of four additional pumps at the Banks Delta Pumping Plant.

- o DWR and the USBR signed the Coordinated Operation Agreement (COA) on November 26, 1986. The COA establishes criteria for coordinated operation of the State Water Project (SWP) and the federal Central Valley Project (CVP). It also provides for conveyance of CVP water through SWP facilities and allows SWP purchases of CVP water on an interim basis.
- o DWR completed a prefeasibility report about the Kern Water Bank in April 1987. Indications are that the program could increase SWP yield by approximately 144,000 acre-feet per year.
- o In October 1986, Santa Barbara County Flood Control and Water Conservation District and San

Luis Obispo County Flood Control and Water Conservation District requested that DWR begin advance planning, develop preliminary design and an Environmental Impact Report for the Coastal Branch of the Aqueduct. The preliminary design and EIR should be completed in April 1989.

- o DWR and MWDSC signed a power agreement on February 24, 1987. MWDSC reduced its 1987 SWP entitlement water request by 195,000 acre-feet, in return DWR will provide sufficient SWP en-

ergy to MWDSC so MWDSC can increase its Colorado River diversions by a like amount.

- o On July 15, 1986, DWR sold \$132 million of Water System Revenue Bonds, Series A, to fund East Branch Enlargement construction. This was the first sale of water system revenue bonds (all prior revenue bonds were for power facilities).
- o On May 5, 1987, DWR sold \$100 million of Water System Revenue Bonds, Series B, for ongoing construction of State Water Project water facilities.

CHAPTER II

SWP OPERATIONS IN 1986

This chapter summarizes SWP water and power operations during the report period, as well as recreation and visitor use at SWP facilities and associated activities affecting fish and wildlife.

Water Operations

Water conditions, SWP reservoir and aqueduct operations, and SWP water quality during 1986 are covered in this section.

Water Conditions

By any system of classification, the 1985–86 water year (October 1, 1985 through September 30, 1986) was a “wet” year. Although total precipitation was well above average for the year, it came in intermittent bursts. Precipitation in October 1985 was 87 percent of normal. In November, precipitation was 198 percent of normal; December and January recorded 55 and 91 percent of normal, respectively. A massive series of storms swept over much of the State in February, recording precipitation at 268 percent of normal, changing the water supply outlook from deficit to surplus. These fluctuations in precipitation continued throughout the water year, and resulted in a statewide average precipitation of 134 percent of normal (Figure 3). February’s storms also resulted in spills from Lake Oroville of 1.4 million acre–feet and 500,000 acre–feet in late February and March, respectively.

The SWRCB’s Water Rights Decision 1485 uses an index based upon the sum of the computed unimpaired runoff of the four principal Sacramento Valley river basins (the Sacramento, Feather, Yuba, and American rivers). During the 1985–86 water year, the combined unimpaired runoff of these rivers was 25.70 million acre–feet, well within the “wet” range of Decision 1485 criteria. A lower than usual percentage of total precipitation was retained as snow because of the warm February storms. On May 1, 1986, DWR forecasted April–July runoff of the four rivers as 5.7 million acre–feet. Because the forecast

runoff was below the 5.9 million acre–foot criterion established by Decision 1485, the 1985–86 water year was designated as one of subnormal snowmelt.

Figure 4 shows cumulative unimpaired runoff to Lake Oroville and Shasta Lake during the 1985–86 water year. Cumulative runoff to both lakes remained above average for the year; Shasta Lake registered 131 percent of the historical average and Lake Oroville recorded 152 percent of average. From late February through early April, cumulative unimpaired runoff to Lake Oroville exceeded that of the maximum year of record (1982–83).

DWR and the USBR declared balanced water conditions from June 21 through August 5, 1986. Balanced water conditions are proclaimed by DWR and the USBR when upstream reservoir storage withdrawals, plus other inflows, approximately equal the water supply needed to (1) satisfy Sacramento Valley and Sacramento–San Joaquin Delta in–basin and export needs, and (2) meet Delta water quality objectives. During balanced water conditions, each Agency adjusts its reservoir storage withdrawals and Delta exports to meet its share of in–basin uses and Delta outflow. Of the last eight years, this is the seventh during which balanced water conditions have been declared.

Reservoir Operations

Lake Oroville and San Luis Reservoir are the major storage sites for SWP water supplies. Figure 5 compares the 1986 operations of these reservoirs with the previous year’s operation. The lowest storage in Lake Oroville for 1986 was on January 3, when storage reached 2,096,000 acre–feet. The spring filling of Lake Oroville roughly paralleled that during 1985 until mid–June, when storage topped out at 3,326,000 acre–feet, or 94.5 percent of normal maximum storage. At this point, storage proceeded to drop and continued dropping until December 31, 1986, when it reached a low of 2,564,000 acre–feet.

FIGURE 3. STATEWIDE PRECIPITATION, 1985-1986 WATER YEAR
(Precipitation in Percent of Average)

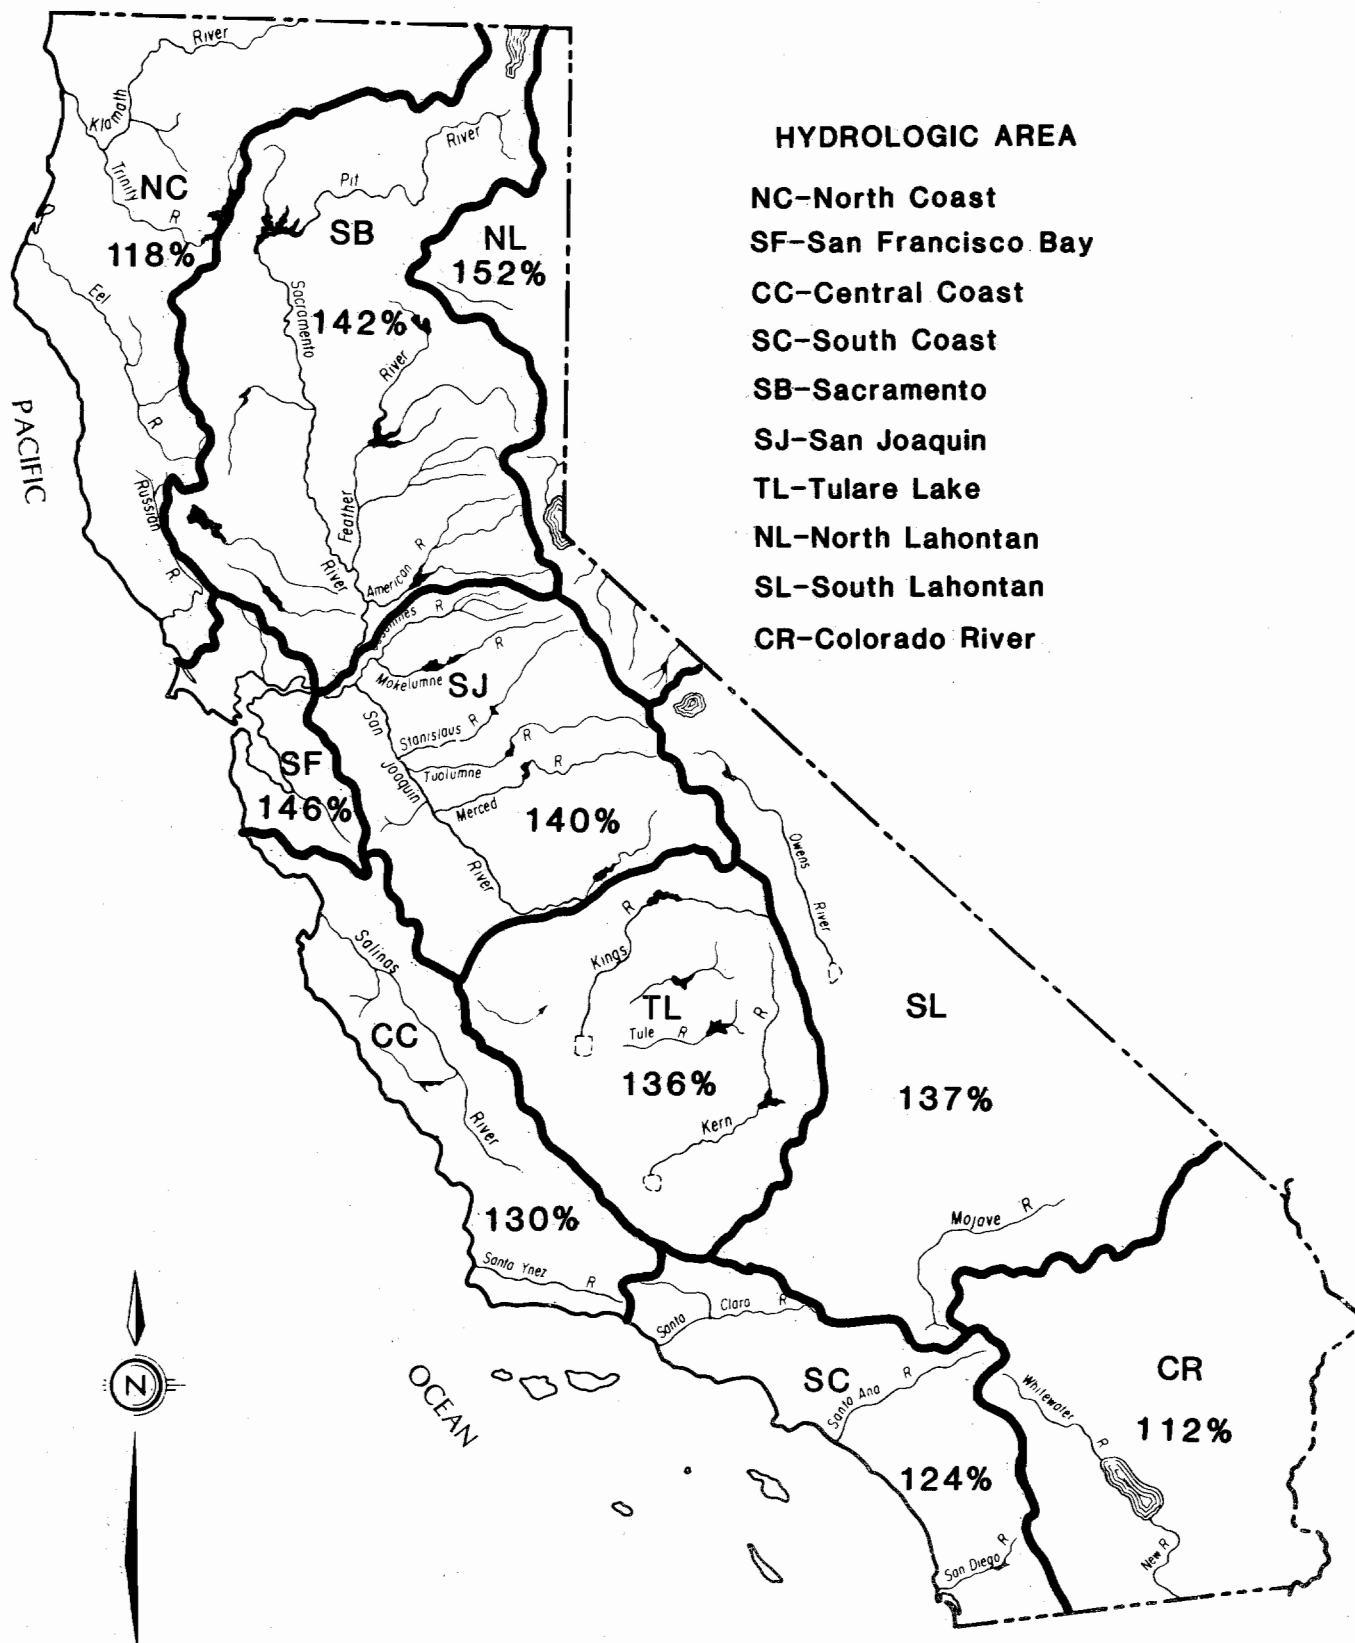

FIGURE 4. CUMULATIVE UNIMPAIRED RUNOFF TO LAKE OROVILLE AND SHASTA LAKE

FIGURE 5. LAKE OROVILLE AND SAN LUIS RESERVOIR STORAGE

San Luis Reservoir started the year at near capacity for State storage and at approximately 79 percent of total storage. Total storage peaked on March 13 at 2,028,000 acre-feet. Drawdown was fairly gradual until early June, when federal demands resulted in a rapid drawdown of the federal share. State storage also was drawn down, but at a lesser rate. The lowest total storage of approximately 1,249,000 acre-feet was reached at the end of August. Total San Luis Reservoir storage increased to 1,916,000 acre-feet (approximately 94 percent of maximum) by December 31, 1986.

For four days in September the water surface elevation at Thermalito Afterbay was limited to a maximum of 125 feet. This allowed for placement of riprap on the inside face of the embankment at the southwest corner of the dam. During most of 1986 the Division of Safety of Dams allowed Thermalito Afterbay to operate up to its maximum operating level of 136.5 feet while improvements in foundation seepage control were constructed, tested, and evaluated. The following tabulation compares 1985 and 1986 year-end storage in the principal SWP reservoirs:

Reservoir & Operational Capacity (ac-ft)	Storage (ac-ft)	
	12/31/85	12/31/86
Lake Oroville 3,520,000	2,098,000	2,564,000
Lake Del Valle 40,000	25,000	25,000
San Luis Res.* 1,062,000	907,000	1,063,000
Silverwood Lake 73,000	68,000	72,000
Lake Perris 127,000	116,000	124,000
Pyramid Lake 170,000	160,000	164,000
Castaic Lake 319,000	271,000	299,000
Total	3,645,000	4,311,000
Total Change		+666,000

* SWP share

Aqueduct Operations

Figure 6 summarizes overall SWP operations in 1986, including the 4,000 acre-feet of CVP water delivered

through SWP facilities to the Buena Vista Water Storage District, which in turn completed the water delivery to the Kern National Wildlife Refuge on October 20, 1986.

About 9,130 acre-feet of local storm water flowed into the California Aqueduct in spring 1986. The flows occurred between Reaches 5 and 6. February brought approximately 3,500 acre-feet of storm water, followed by 5,300 acre-feet in March and 330 acre-feet by mid-April, when the sideflows finally stopped.

The Kern River Intertie was used twice in 1986. From March 19 to April 19, the Project took excess San Joaquin Valley floodwater into the California Aqueduct via the Intertie. During that time the Aqueduct received almost 15,600 acre-feet from the Kaweah River. From June 5-7, the SWP took approximately 1,900 acre-feet more excess San Joaquin Valley floodwater into the Aqueduct via the Intertie.

The East Branch of the California Aqueduct flow was lowered, from March 28 through April 22, for repairs to damaged canal lining in Pools 45 and 46. The lining damage occurred in late February when water intruded behind the canal lining at the construction sites of the East Branch enlargement. Repairs were finished by April 22. While the canal water level was lowered, deliveries to water contractors on the East Branch came from pool storage, Silverwood Lake, and flows through the damaged areas (limited to 290 cfs).

The switchyard at Alamo Powerplant was energized on April 17 to test the auxiliary equipment. The power plant was provisionally released for operation on July 1. The unit is currently limited to a minimum of 6 MW (600 cfs) and a maximum of 17.5 MW (1,750 cfs) because vibrations occur below and above these limits. The unit capability at 115 percent of rated output is 19.7 MW at 2,050 cfs.

Movement along the Lower Quail Canal embankment required restricted water flow in the canal. On October 25, 1986, water surface elevation was limited to a maximum of 3,315.0 feet and a minimum of 3,310.0 feet. Those water service levels were maintained un-

**Balanced water conditions for the Delta were declared by DWR and the USBR
from June 21 through August 5, 1986**

til December 9, 1986, when the maximum was raised to 3,317.0 feet. The levels were raised again, to 3,320.0 feet, on May 6, 1987. The restricted water flow did not have an impact upon SWP operations.

On August 15, DWR completed pumping 123,566 acre-feet of Decision 1485 replacement water at Harvey O. Banks Delta Pumping Plant for the USBR.

On April 28, 1986, the west discharge line at A. D. Edmonston Pumping Plant was removed from service so repaired discharge valves could be placed on Units 6 and 8. Discharge valves were also removed from Units 2 and 4 for repair. The west discharge line was returned to service on July 14, 1986. On the east discharge line, Unit 9 should be back in service in 1987 after stand-still seal repairs are completed. Unit 13 was out of service until the end of September 1986 for installation of a computer diagnostic maintenance repair system. This diagnostic system will indicate when a unit needs repairs, allowing outages to be scheduled rather than imposed by a unit break-

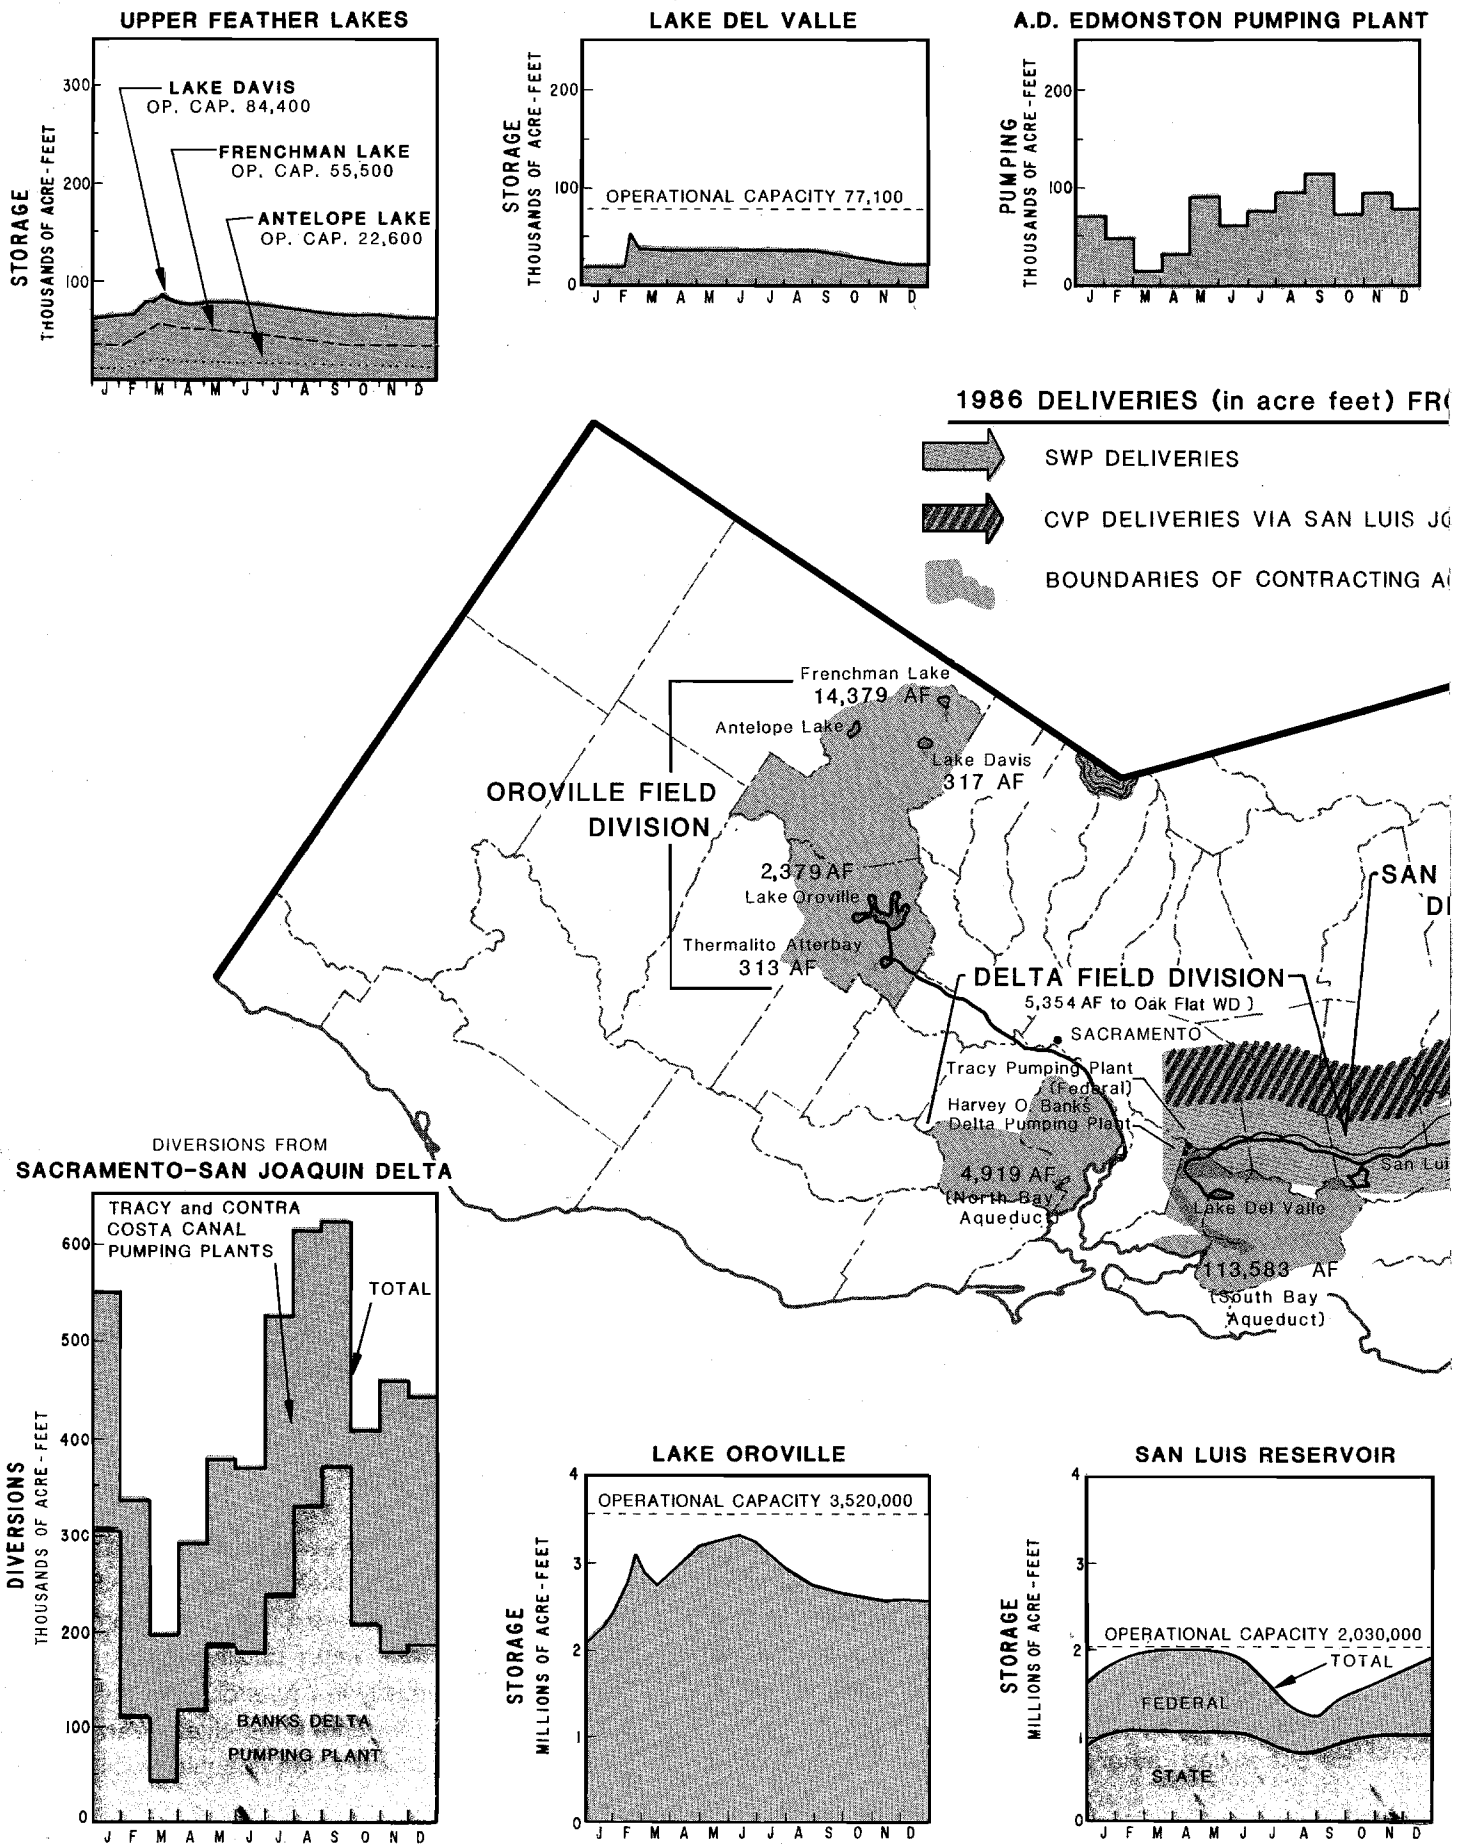

down. Since these outages were scheduled, provisions were planned to ensure delivery of contractors' requests.

Releases from Lake Del Valle into the South Bay Aqueduct began June 18, 1986, at the request of the South Bay Aqueduct water contractors. Releases continued through June 26 and totaled 463 acre-feet. The water releases were part of additional storage approved earlier in the year by the Corps of Engineers and the East Bay Regional Park District. The releases were used to improve water quality in South Bay Aqueduct deliveries.

Water Quality

SWRCB's Decision 1485 sets water quality standards, export limitations, and outflow requirements to protect beneficial uses in the Delta. A record of SWP water operations and water quality monitoring in the Delta appears annually in Appendix E to Bulletin 132, published separately under the title "Water Operations in the Sacramento-San Joaquin Delta."

CASTAIC LAKE

The water year 1985-86 was classified as "wet" under the Four Basin Index system on March 1, 1986, bringing into effect the most restrictive water quality standards under Decision 1485. Prior to March, "dry" year standards (from the previous year's classification) were in effect for January and "below normal" standards were in effect for February. Subsequently, in May 1986, "subnormal snowmelt" was designated, causing a relaxation of the Decision 1485 Delta Outflow Index standard from May 6 through July 31. All of these standards were met by comfortable margins in 1986. North Delta Water Agency contractual electrical conductivity (EC) requirements were also met in 1986.

Table 2 summarizes 1986 water quality conditions at key locations throughout the SWP system. The table also lists the monthly average water quality objectives set forth in Article 19 of the water supply contracts. The Article 19 water quality objectives are based upon the expected construction of an efficient cross-Delta water transfer system. Most of these objectives were met in 1986.

The percent sodium objective (50 percent) was exceeded by 2 to 14 percent at most stations along the California Aqueduct, especially in January directly following the previous dry year. This limit was also exceeded at a few of the stations in February and during several spring and fall months. At Thermalito Forebay and eight stations along the Aqueduct, the phenol limit (0.0001 mg/l) was exceeded generally by 0.0001-0.008 mg/l early in the year and later in the fall. At check 29 the phenol limit was exceeded by 0.018 mg/l. The iron plus manganese objective of 0.3 mg/l was exceeded by 0.3-2.7 mg/l at Lake Davis and three stations along the Aqueduct in August and September 1986. Finally, at Pearblossom Pumping Plant, the chloride (110 mg/l) objective was exceeded by 4 percent in January.

The Delta Outflow Index (DOI) is a calculated value that is a relative measure of the net westerly outflow of fresh water at Chipps Island near Pittsburgh. The DOI averaged only 13,000 cfs in January 1986, as generally dry conditions continued. During February,

however, the DOI increased dramatically because of flood conditions in California.

The DOI, adjusted to include Yolo Bypass flows, averaged about 180,000 cfs in February and 154,000 cfs in March (mean daily flow/month). The DOI then declined sharply through the spring to approximately 13,400 cfs in May. Flows further decreased throughout the summer to a low of approximately 5,000 cfs in August. During the fall of 1986, an unusually dry season, the DOI rose moderately overall, but never exceeded 12,000 cfs. Throughout the year, however, both Delta outflow and Sacramento River flow at Rio Vista remained above the minimum flows required by Decision 1485.

Export limitations specified in Decision 1485 were met in 1986, though by very small margins in May and June.

High winter and spring inflow to the Delta delayed significant phytoplankton production in the central Delta. A bloom of the diatom *Melosira granulata* occurred in June with peak chlorophyll "a" levels of nearly 100 mg/l. A second, smaller bloom of this diatom occurred in late July. Chlorophyll "a" levels were in the 20-30 mg/l range. In Suisun Bay there were two plankton blooms, one in June and the other in August. Chlorophyll "a" levels were in the 20-30 mg/l range. The "Delta Controlled Flow Study", undertaken in 1984 and 1985 by the Interagency Ecological Study Programs to refine the criteria used to predict phytoplankton bloom, was scheduled for 1986 but abandoned because of high Delta outflow.

During lower flow years, the Old River rock barrier is installed at the bifurcation of Old River and the San Joaquin River. The barrier encourages upstream migration of salmon and steelhead by increasing fall flows in the lower San Joaquin River. The barrier was not requested by the Department of Fish and Game in 1986, and therefore was not installed by DWR.

Under the interagency Delta Health Aspects Monitoring Program, monthly water samples from the Delta and its various tributaries are analyzed for sodium, pesticides, organic pollutants, and trihalomethane formation potential. A 1986 project report details

TABLE 2. WATER QUALITY AT SELECTED STATIONS IN 1986

Station	Monthly Average	Concentrations (in parts per million unless otherwise noted)					
		Dissolved Solids	Total Hardness	Chlorides	Sulfates	Sodium(a) (Percent)	Boron

a) Amounts of sodium in solution expressed as a percentage of the total sodium, calcium, magnesium, and potassium in solution.

program activities and findings for data collected between January 1985 and June 1986. From the data collected, the report concludes that Delta water supplies are "generally of acceptable quality with respect to levels of chemical contaminants and minerals which may affect human health."

DWR also continued routine monthly sampling of asbestos levels in California Aqueduct water during 1986.

Water Service

The following sections summarize 1986 water conveyance and deliveries via SWP facilities.

Total Water Conveyed

A total of 2,229,727 acre-feet of water was conveyed through SWP facilities in 1986, excluding losses. Table 3 summarizes total water conveyance for the 25 years of SWP operation, and shows the disposition of that water under the headings discussed in the following paragraphs.

Entitlement Water. The SWP water supply contracts, executed in the early 1960s, establish specific annual entitlement water amounts each long-term water contractor may request. The initial "Table A" schedules reflected each contractor's estimate of future water needs at the time the contracts were signed; some have subsequently been revised. Table B-4 in Appendix B presents complete information on annual entitlements for each contractor, as set forth in Table A of each SWP water supply contract.

Columns (1) through (7) of Table 3 summarize annual contractual entitlements for the various SWP service areas for the 1962-86 period; actual entitlement deliveries by year are shown in Column (8).

In September of every year, each contractor furnishes an updated estimate of future requirements for SWP water. In the fall of 1985, 24 contractors requested a total of 2,364,193 acre-feet of entitlement and deferred entitlement water for 1986 delivery. On November 27, 1985, DWR approved the initial schedule for 1986 water deliveries, based upon the 1986 rule curve criteria and the water supply fore-

cast. In December 1985, DWR applied an 80,840 acre-foot deficiency for all agricultural entitlement requests. This deficiency was based upon the 1986 rule curve analysis. Deficiencies were removed in February 1986.

Actual entitlement water delivered in 1986 totaled 1,995,636 acre-feet to the 24 contractors accepting deliveries including 634 acre-feet of 1986 surplus water to Oak Flat Water District and 1,399 acre-feet of 1986 surplus water to Dudley Ridge Water District (DRWD) reclassified as entitlement water. (One contractor took no scheduled entitlement water.) Twelve contractors took less entitlement water than initially requested, and four contractors took the amounts initially requested (their full Table A entitlements.) The other eight contractors, Castaic Lake Water Agency (CLWA), Crestline-Lake Arrowhead Water Agency (CLAWA), Devil's Den Water District (DDWD), DRWD, Kern County Water Agency (KCWA), Littlerock Creek Irrigation District (LCID), Palmdale Water District (PWD), and Santa Clara Valley Water District (SCVWD) increased their requested deliveries of entitlement water during the year.

Entitlement water increases are listed below:

<u>Contractor</u>	<u>Requested Increase (ac-ft)</u>
CLWA	94
CLAWA	42
DDWD	1,567
DRWD	4,697
KCWA	4,276
LCID	63
PWD	96
SCVWD	38

Surplus Water. In September 1985, seven contractors submitted estimates indicating they could use a total of 453,924 acre-feet of surplus water during 1986. Due to the entitlement water deficiencies DWR imposed in December 1985, DWR did not approve any surplus water deliveries until deficiencies were removed at the end of February 1986.

Five SWP contractors received 14,586 acre-feet of surplus water in 1986. SCVWD and Empire West Side Irrigation District (EWSID) requested, but did not take, 1986 surplus water. DRWD, KCWA, and Tulare Lake Basin Water Storage District took delivery of 1985 carry-over surplus water totaling 12,270 acre-feet.

Unscheduled Water. SCVWD, DDWD, EWSID, KCWA, and Tulare Lake Basin Water Storage District received 22,034 acre-feet of unscheduled water in 1986.

Other Water. Column (10) of Table 3 summarizes deliveries of several other types of water, as defined in the accompanying footnote. These are shown in more detail (for 1986) in Table 5, and described in the accompanying text later in this chapter under the heading "Total 1986 Water Deliveries."

Initial Fill Water. The quantities shown in Column (12) of Table 3 are the amounts used for initially filling aqueducts and reservoir storage space south of the Delta to maximum operational capacities. Initial filling began in 1962 with the first filling of the South Bay Aqueduct and was completed in 1979, when Lake Perris reached its maximum operational capacities.

Operational Losses and Storage Changes. Column (13) of Table 3 shows the annual quantities of water conveyed to replenish losses through evaporation and seepage from SWP aqueducts and reservoirs south of the Delta, combined with corrections for changes in reservoir storage and for inflow from local drainage areas (including inflows from the Kern River Intertie and the First Los Angeles Aqueduct). Years with negative values are those in which storage withdrawals and storable local inflow exceed storage additions plus replenishment of evaporation and seepage losses.

Recreation Water. Column (14) of Table 3 summarizes historic deliveries of recreation water. Recreation water is used at both SWP recreation facilities and for fish and wildlife mitigation and enhancement. In 1986, a total of 3,865 acre-feet was conveyed under this category, as follows:

- o 2,206 acre-feet for public recreation facilities at Lake Del Valle, San Luis Reservoir, O'Neill Forebay, Silverwood, Pyramid, and Castaic lakes, and Lake Perris;
- o 1,134 acre-feet released to maintain a trout fishery in Piru Creek, in accordance with a condition of the Federal Energy Regulatory Commission license for power development at Pyramid Lake;
- o 226 acre-feet to replace water losses at Castaic Lagoon, an impoundment devoted entirely to recreation;
- o 299 acre-feet conveyed to about 830 acres of wildlife mitigation lands located below O'Neill Forebay and at the Pilibos Wildlife Area (30 miles south of Los Banos).

Water Deliveries and Credits to Long-Term Contractors

Table 4 summarizes 1986 water deliveries to each SWP long-term contractor that received water during the year. The table also shows future entitlement delivery and reduction credits, as explained in the following sections.

Future Entitlement Delivery Credits (Makeup Water).

When the SWP is unable to deliver the requested entitlement water in any year, long-term contractors are afforded relief under Articles 12(d) and 14(b) of the water supply contract. Contractors may elect to receive the undelivered entitlement water at other times during the year, or in succeeding years, to the extent that the water and delivery capability are available. In 1977, as a result of the drought, initially-scheduled quantities of water were reduced. Through these reductions, 21 long-term contractors gained credits for future delivery totaling 457,066 acre-feet. These credits for undelivered entitlement water under Articles 12(d) and 14(b) have been reduced by delivery of "makeup" water over the years; now only 10 contractors have remaining rights. No makeup water was delivered in 1986. As shown in Column (7) of Table 4, 128,116 acre-feet of credits for future deliveries remained available as of January 1, 1987 - 123,329 acre-feet under Article 12(d) and 4,787 acre-feet under Article 14(b).

TABLE 3. HISTORICAL SUMMARY OF ENTITLEMENTS,

Calendar Year	Annual Entitlements Under Long-Term Water Supply Contracts (acre-feet)(a)							Entitlement Water
	Feather River Area	North Bay Area	South Bay Area	San Joaquin Valley Area	Central Coastal Area	Southern California Area	Total

a) From Table B-4.

b) Values include deliveries of SWP water to short-term contractors (Mustang Water District, 1970-1971; Tracy Golf and Country Club, 1974, 1979, and 1980; Green Valley Water District, 1974, 1975, 1978, 1979, 1980, and 1985; and Granite Construction Company, 1980).

c) Includes preconsolidation repayment water, 1977 emergency relief water, regulated delivery of local supply, non-SWP water delivered to Napa County FC&WCD through SWP facilities and conveyance of CVP water.

d) Includes net effect of (1) operational losses from SWP transportation facilities, (2) changes in reservoir storage south of the Delta, (3) storable local inflows to SWP reservoirs, (4) side inflow to the San Luis Canal, and (5) diversions via the Kern River Intertie.

Future Entitlement Delivery Credits (Wet-Weather Water). Under water supply contract Article 7 (South Bay contractors) or Article 45 (San Joaquin Valley contractors), SWP contractors can acquire credits for future deliveries when above-normal local water supplies reduce the need for SWP water. At the time of delivery, the sum of current annual entitlement, plus "wet-weather" water cannot, however, exceed a contractor's maximum annual entitlement.

During 1986, two South Bay Aqueduct contractors acquired an additional 37,112 acre-feet of wet-weather credits under Article 7 of their water supply contracts. One San Joaquin Valley contractor acquired an additional 26,554 acre-feet of wet-weather credits under Article 45. As of January 1, 1987, three contractors had credits totaling 337,425 acre-feet acquired under the wet weather provisions of their contracts.

- e) Revised and corrected from Bulletin 132-85 to reflect 557 acre-feet of 1978 exchange water (MWDSC Basin) changed from other water to municipal and industrial entitlement water.
- f) Revised and corrected from Bulletin 132-85 to reflect 126 acre-feet of 1982 exchange water (MWDSC Basin) changed from other water to municipal and industrial entitlement water.
- g) Revised and corrected from Bulletin 132-86 to reflect a reduction of 5,662 acre-feet of entitlement related water delivered to MWDSC.
- h) Revised and corrected from Bulletin 132-86 to reflect 5,662 acre-feet of 1978 exchange water reclassified from other water to agricultural surplus water.
- i) Includes 37,170 acre-feet of 1985 carry-over entitlement water and 634 acre-feet of 1986 surplus water reclassified as 1986 entitlement water delivered.
- j) Includes 12,270 acre-feet of 1985 carry-over surplus water.
- k) Revised and corrected from Bulletins 132-85 and 132-86 to reflect entitlement water deliveries to the City of Yuba City.

Future Entitlement Reduction Credits (Wet-Weather Water). The "wet-weather" contract provisions also allow a contractor to increase entitlement water deliveries in years of below-average local water supply and to decrease entitlement deliveries by an equal

amount in later years. Oak Flat Water District made such an increase in 1972, and has retained its reduction credit of 2,466 acre-feet through 1986, as shown in Column (11) of Table 4.

a) 1985 entitlement held over for delivery during January and February 1986.

b) Includes 7,950 acre-feet of 1977 emergency relief water, including 1,703 acre-feet of 1977 emergency relief water transferred to Tulare Lake Basin Water Storage District.

c) 1977 emergency relief and 1978 exchange water transferred from KCWA (not included in totals).

d) Antelope Valley-East Kern Water Agency future entitlement delivery credits total 4,787 acre-feet under water supply contract Article 14(b) and 10,054 acre-feet under Article 12(d). Credits shown in this column for all other contractors are under Article 12(d) of their water supply contracts.

e) Non-SWP water delivered to Napa County FC&WCD through SWP facilities; included here to match treatment in Appendix B.

f) Equals 1986 total as shown in Table B5-B.

Future Entitlement Delivery Credits (Carry-Over Water). Both Empire West Side Irrigation District (EWSID) and Devil's Den Water District (DDWD) have reached their maximum annual entitlements. Therefore, EWSID is no longer able to exercise the delivery provisions of Article 45, while DDWD had not amended the wet-weather provisions into its contract prior to reaching maximum annual entitlement. EWSID and DDWD do, however, have temporary "carry-over" storage rights in either Lake Oroville or San Luis Reservoir under letter agreements executed on October 1, 1979. No water was stored during 1986 under the October 1, 1979 agreements.

Future Entitlement Delivery Credits (1985 Carry-Over Water). During spring 1985, the lack of sufficient rainfall prompted fears of a possible drought similar to that experienced during 1976-77. In accordance with rule curve procedures requiring a minimum carry-over storage, DWR canceled scheduled surplus water deliveries, approved as of May 31, 1985, for October through December 1985. Precipitation continued to be below-normal during fall 1985, and DWR imposed deficiencies on the 1986 agriculture entitlement requests.

The precipitation during late 1985 delayed the harvesting of crops and the application of pre-irrigation water from the contractors' remaining 1985 deliveries. Agreements executed in December allowed the carry over of 37,170 acre-feet of 1985 agricultural entitlement water and 12,270 acre-feet of 1985 agricultural surplus water for use during January and February 1986. Column (2) of Table 4 shows the delivery of entitlement water under these agreements. Deliveries of 1985 carry-over surplus water were as follows:

	<u>Acre-Feet</u>
Dudley Ridge Water District	172
Kern County Water Agency	2,935
Tulare Lake Basin Water Storage District	<u>9,163</u>
Total	12,270

Both agreements provided for contractor payment of any identified cost increase that would otherwise be experienced by other SWP contractors or DWR as a result of activities under these agreements. All entitlement and surplus water carried over from 1985 was delivered during January and February of 1986.

Total 1986 Water Deliveries

During 1986, the SWP provided water service to 35 agencies. These included 24 long-term water contractors and 11 other agencies. Monthly deliveries to each of the 35 agencies, shown in Table 5, are summarized as follows:

- o 1,958,466 acre-feet of 1986 entitlement water to 23 long-term contractors. Only eight contractors took their full contract entitlement. The twenty fourth contractor, Napa County Flood Control and Water Conservation District, only received non-Project water delivered through SWP facilities;
- o 37,170 acre-feet of 1985 entitlement water was carried over and delivered during January and February 1986;
- o 2,316 acre-feet of surplus water to three long-term contractors;
- o 12,270 acre-feet of surplus water was carried over and delivered during January and February 1986;
- o 22,034 acre-feet of unscheduled water to five long-term contractors;
- o 7,950 acre-feet of 1977 emergency relief water to two long-term contractors;
- o 39,078 acre-feet of regulated local supply to two long-term contractors and three noncontractors;
- o 3,519 acre-feet of non-Project water to one long-term contractor;
- o 1,603 acre-feet of preconsolidation repayment water to one noncontractor;
- o 17,513 acre-feet of CVP water transported to six annual contractors in the San Joaquin Valley;

- o 123,566 acre-feet of CVP water conveyed to O'Neill Forebay to replace curtailed CVP pumping during May and June in accordance with SWRCB Decision 1485; and
- o 3,865 and 377 acre-feet of SWP and CVP water, respectively, conveyed for recreation and fish and wildlife enhancement.

Table 5 shows monthly deliveries of each type of water conveyed in 1986, along with summaries of Table A entitlements and cumulative entitlements not delivered. The types of water service not described in preceding sections are covered in the following paragraphs:

1977 Emergency Relief Water. At the end of 1977, the SWP had 95,176 acre-feet of water in storage for emergency relief of drought conditions. In 1978, when it became apparent that the 1976-77 drought was over, the stored water was sold. Two non-SWP contractors, (Green Valley Water District and Tracy Golf and Country Club) purchased a total of 650

acre-feet and took delivery of the water in 1978 and 1979.

Kern County Water Agency (KCWA) purchased the remaining 94,526 acre-feet of stored water for delivery before December 31, 1983. At KCWA's request, the agreement was amended to extend the delivery deadline to December 31, 1986. On January 1, 1986, the balance was 7,950 acre-feet; during 1986 KCWA took delivery of 6,247 acre-feet of this water and transferred 1,703 acre-feet to Tulare Lake Basin Water Storage District. The total delivery of KCWA's 1977 emergency relief water was 7,950, leaving no balance as of January 1, 1987.

Regulated Delivery of Local Supply. SWP facilities are also used to transport non-Project water for long-term SWP contractors and for other agencies under various agreements to honor local water rights. Some of this water simply passes through SWP transportation facilities; some is stored in SWP reservoirs for release later in the year, under agreements by which the water right holders pay storage fees. In 1986, a total of 39,078 acre-feet in this category was

On February 19, 1986 flood releases through the Lake Oroville spillway were increased to 137,000 cfs, the highest daily total since completion of Oroville Dam in 1986

delivered to two long-term contractors and three other agencies.

Non-SWP Water to Napa County Flood Control and Water Conservation District (NCFC&WCD). Pending completion of Phase II of the North Bay Aqueduct, NCFC&WCD receives interim water from the USBR's Solano Project, transported by Solano Irrigation District to Reach 3B of the North Bay Aqueduct. From there the water is pumped through interim pumping facilities near Cordelia and transported through SWP facilities to the terminus. During 1986, NCFC&WCD received 3,519 acre-feet of Solano Project water.

Preconsolidation Repayment Water. DWR entered into two contracts during 1964 to obtain water to preconsolidate land within the right of way of the California Aqueduct. This water was to be paid back upon request after the Aqueduct began service. The contracts, which have changed hands over the years, are currently held by Shell California Production, Inc. (Shell), and the J. G. Boswell Company (Boswell). The original contracts expired December 31, 1984. As described in Chapter III of Bulletin 132-86, agreements were completed in 1985 to extend the period for return of preconsolidation water through December 31, 1994. During August and September, 1,603 acre-feet of preconsolidation repayment water was delivered to Shell from unregulated flows in the Delta. The remaining balances are 22,086 acre-feet to Shell and 14,170 acre-feet to Boswell.

Conveyance and Transportation of CVP Water. During 1986, three arrangements for conveying CVP water through SWP facilities were in effect. In each arrangement the USBR provided the electrical energy required for moving the water through the Banks Delta Pumping Plant and, if needed, the Dos Amigos Pumping Plant.

- o The USBR and DWR have three-party contracts with nine local agencies for transportation of CVP water through SWP facilities to KCWA's Cross Val-

ley Canal through 1995. In another contract with DWR, the USBR agrees to furnish the electrical energy to pump the CVP water at the Banks Delta Pumping Plant for these nine Cross Valley Canal contractors. DWR's charges under the nine contracts are for use of SWP facilities to transport water from the Delta to O'Neill Forebay and from Reach 8C, the first repayment reach beyond the joint-use facilities, to the Cross Valley Canal in Reach 12E. The SWP began transportation service for the Cross Valley Canal contractors in 1976; during 1986, no water was transported.

- o Under the annual conveyance agreement executed May 22, 1986, DWR conveyed water to four USBR annual contractors. In 1986, a total of 13,513 acre-feet was conveyed to Green Valley Water District, Musco Olive Products, Inc., Tracy Golf and County Club, Kings County Water District, and Lakeside Irrigation Water District.

As part of this agreement, the USBR agreed to provide its share of water to meet Delta water quality requirements and to curtail its Delta exports in accordance with Decision 1485. This agreement also provides that the SWP furnish conveyance capacity from the Delta to replace the May and June curtailment of CVP pumping. (Decision 1485 curtails both CVP and SWP pumping from the Delta during May, June, and July to protect striped bass, but the July curtailment does not restrict existing CVP pumping capability.) A total of 123,566 acre-feet of CVP water was conveyed in 1986 to replace capacity foregone during May and June 1986.

- o An agreement executed September 23, 1986, provides for the transporting of up to 10,000 acre-feet of CVP water from Reach 8C to Reach 10A for delivery to the U. S. Fish and Wildlife Service's Kern National Wildlife Refuge. During September and October 1986, 4,000 acre-feet of this water was delivered.

- This column includes entitlement not delivered, deferred or otherwise, whether or not the water contractor has received any remuneration.
- Revised from Bulletin 132-86 to reflect 108 and 62 acre-feet of entitlement water delivered to the City of Yuba City during 1984 and 1985, respectively.
- Revised from Bulletin 132-86 to reflect Kern County Water Agency's reclassification of 5662 acre-feet of 1978 exchange to surplus water.

Power Operations

DWR has operated as a bulk power agency since April 1983. As such, DWR operates a mix of owned, contracted, and purchased power resources to meet SWP needs via contracted transmission capacity. This was DWR's third full year as a bulk power agency.

Energy Use

Table 6 summarizes monthly SWP energy use at SWP plants during 1986. Total energy use and losses for the year were 5.18 billion kWh, approximately 6 percent less than the amount used in 1985. This decreased energy use reflected decreased water deliveries to SWP contractors by about 12 percent from 1985. SWP energy use was nearly evenly distributed

between the two major power service areas: Pacific Gas and Electric Company (PGandE) and Southern California Edison Company (SCE). About 2.54 billion kWh were used by SWP plants in PGandE's service area, compared with 2.49 billion kWh used in SCE's service area.

Under various water conveyance contracts and exchange agreements, some CVP water is pumped through SWP facilities at Banks Delta, Dos Amigos, San Luis, and Las Perillas pumping plants. The USBR furnishes the energy for this use of SWP pumping facilities. Table 6A summarizes the total amount of en-

ergy used for pumping at each plant, the energy furnished by the USBR, and the derivation of the net SWP energy use presented in Table 6. (The quantities shown as "excess daily energy scheduled by USBR" represent the accumulations of small differences between hourly amounts of energy scheduled for pumping SWP water and those actually used.) Similarly, Table 6A shows the derivation of the SWP share of energy generated at the San Luis Pumping-Generating Plant.

Energy Sources

Table 6 also shows the monthly sources of SWP energy during 1986. The output of the Hyatt-Thermalito power complex in 1986 was 2.45 billion kWh, about 44 percent higher than last year's output and just above the estimated average annual output of 2.38 billion kWh.

Energy generation at the SWP power recovery plants (San Luis, Alamo, Devil Canyon, Warner, and Castaic) totaled about 1.25 billion kWh, about 83 percent of last year's amount. The combined output of the recovery plants and the Hyatt-Thermalito facilities

was sufficient to meet about 72 percent of SWP energy requirements in 1986.

Other SWP hydroelectric power resources are obtained under contract with the Kings River Conservation District (KRCD) and MWDSC. The KRCD contract provides DWR with all of the output of the 165-MW Pine Flat Powerplant. The plant furnished 0.82 billion kWh to the SWP in 1986. Under the MWDSC contract, DWR receives energy from five small hydroelectric plants on the MWDSC system (30 MW total capacity). As explained in Chapter VI, DWR has exchange agreements with SCE and the Los Angeles Department of Water and Power (LADWP) to facilitate transmission of energy from the MWDSC plants to the SWP.

Under the 1979 DWR-SCE Power Contract, in effect since April 1983, part of the Hyatt-Thermalito generation and all of the output of Devil Canyon and Alamo power plants are delivered to SCE. The energy is generally delivered during on-peak periods and a greater amount of energy is returned during off-peak periods. Table 6 shows both the monthly quantities of energy delivered and returned under this

contract. The net gain to the SWP during 1986 was 1.69 billion kWh.

The Bottle Rock Geothermal steam plant provided 0.17 billion kWh during 1986. DWR paid MCR Geothermal Corp. \$4,275,343 and withheld \$1,253,840 because insufficient steam supply prevented Bottle Rock from generating at full capacity. This matter is presently in litigation (see "Litigation," Chapter III).

Reid Gardner Unit No. 4 supplied 0.80 billion kWh in 1986. This includes the return of 15.6 million kWh of energy banked with the Nevada Power Company in 1983 during initial start-up of this coal-fired unit. The balance of the banked energy due DWR was about 14.4 million kWh as of December 31, 1986.

DWR also has a contract with TERA Power Corporation for the purchase of energy produced at Bethany Wind Park, near the South Bay Pumping Plant. About 145 50-kW wind turbines were operational at the end of 1986; over 4 million kWh of wind-generated energy was delivered to DWR during the year.

Power Purchases and Power Service Costs

Power purchases and transmission service costs during 1986 are summarized in Table 7. DWR purchased 2.47 billion kWh of energy from 17 utilities for \$42.89 million. Transmission, capacity, losses, and dispatching services amounted to \$28.79 million. Other costs associated with the operation and management of SWP power resources not in Table 7 include:

- o debt service and OM&R costs of \$8.65 million associated with the output of Pine Flat Powerplant;
- o OM&R and fuel costs of \$43.34 million associated with Reid Gardner Unit No. 4; and
- o debt service and OM&R costs associated with other SWP-owned generation facilities.

Power Sales

Existing SWP resources, short-term power purchase and sales contracts, and longer term power and transmission contracts combine to ensure that the SWP has enough energy and capacity to meet future Project needs. DWR entered into power sales con-

TABLE 7. SWP POWER AND TRANSMISSION SERVICE PURCHASES IN 1986

Supplier	Services Provided	Invoice Amount
Bonneville Power Authority	Nonfirm energy	\$ 10,705,287
British Columbia Hydro Power Authority	Nonfirm energy	735,168
Idaho Power Company	Nonfirm energy	964,139
Kings River Conservation District	Hydroelectric energy	6,351,800
Los Angeles Department of Water and Power	Transmission and dispatching	91,884
MCR Geothermal Corporation	Geothermal steam	4,275,343(a)
Montana Power Company	Nonfirm energy	479,000
Nevada Power Company	Transmission	1,001,214
Pacific Gas and Electric Company, Southern California Edison Company, San Diego Gas and Electric Company	EHV transmission	1,500,000
Pacific Gas and Electric Company	Transmission	13,445,308
Pacific Power and Light Company	Firm energy, transmission, and losses on third party systems	4,935,620
Portland General Electric Company	Firm energy	3,375,222
Salt River Project Agricultural Improvement and Power District	Energy	916,785
Southern California Edison Company	Transmission, filing fees, and dispatching	12,346,179
TERA Power Corporation	Wind energy	380,748
The Metropolitan Water District of Southern California	Hydroelectric energy	10,382,215
Washington Water Power Company	Nonfirm energy	3,526
Western Area Power Administration	Interconnection transmission	378,000
Total		\$72,267,438

a) DWR withheld \$1,253,840 for insufficient steam supply.

tracts to sell any excess capacity and energy, within the limit of SWP's contractual transmission capabilities, at Malin, Tesla, Vincent, Sylmar, and Eldorado substations.

DWR sells this excess capacity and energy on a daily basis to utilities at current market rates. The decision to sell the power, or to wait for a more opportune time, takes into consideration projected SWP operations and changes in the power market as well as energy losses, transmission costs, and dispatching costs. DWR's computerized accounting system monitors the status of the power purchases and sales operation.

Table 8 summarizes power related sales by DWR in 1986. Total energy sold was 3.48 billion kWh for a revenue of \$68.37 million to 15 utilities. Other power related revenues were for peaking-capacity pay-

ments from Nevada Power Company and peaking-capacity foregone payments from LADWP for a combined revenue of \$1.92 million.

Transmission Service Agreements

The transmission service agreements described in Bulletin 132-84 (page 38) are still in effect. Some contractual options on new interruptible transmission paths between Vincent-San Onofre, Vincent-Sylmar, Vincent-Midway, Vincent-Palo Verde, and Eldorado-Mead were exercised in order to make energy sales to utilities in Arizona, Nevada, and Southern California.

The Table Mountain reinforcement project, which increases the 500 kV transmission capacity on PGandE's transmission line from Table Mountain to Tesla substations, was completed in April 1987.

TABLE 8. SWP POWER SALES IN 1986

Purchaser	Kilowatthours	Amount of Sale
City of Anaheim	183,148,000	\$ 3,864,880
City of Burbank	61,183,000	1,890,225
City of Glendale	32,232,000	1,050,871
City of Pasadena	64,335,000	1,930,928
City of Riverside	65,584,000	1,371,818
City of Santa Clara	124,400,000	2,620,660
City of Vernon	432,874,000	8,725,256
El Paso Electric Company	200,000	7,200
Los Angeles Department of Water and Power	48,225,000	2,137,951(a)
Nevada Power Company	367,152,000	10,184,967(b)
Northern California Power Agency	26,909,000	545,055
Pacific Gas and Electric Company	1,113,280,000	19,355,071
Salt River Project Agricultural Improvement and Power District	65,788,000	1,767,068
San Diego Gas and Electric Company	121,250,000	2,113,345
Southern California Edison Company	774,618,000	10,808,527(c)
Total	3,481,178,000	\$68,373,822

a) Includes \$1,160,100 for peaking capacity foregone.

b) Includes \$757,040 for capacity.

c) In addition to this amount, there was \$26,259 in revenue for delivery of 2,076,000 kWh of energy to SCE under the DWR-SCE Generation Replacement Agreement. DWR made this energy delivery to SCE pursuant to the 1982 DWR-San Bernardino Valley Municipal Water District (SBVMWD) Energy Purchase Agreement to replace generation lost to SCE because of water diversions SBVMWD made from the Santa Ana River and Mill Creek.

Recreation and Visitor Facilities

Recreation days of use at SWP facilities totaled nearly 7 million during 1986. Table 9 summarizes this use, which includes camping, boating, fishing, swimming, bicycling, and other recreational activities. This total represents a 5 percent increase from 1985.

Most SWP recreation and visitor use was concentrated at the major reservoirs, where well-developed facilities exist to accommodate public use. Fifty-six percent of the total SWP recreation use in 1986 occurred at the four major reservoirs in Southern California.

At Lake Davis, in the Upper Feather River area, a lane was added to the existing boat launch ramp and additional courtesy floats were provided on the lake by the California Department of Boating and Waterways (DBAW).

By the end of 1986, construction was nearly complete on the East Bay Regional Park District's Phase IV facilities at Lake Del Valle. Among facilities in this development are 46 additional family campsites, a new amphitheater, 100 picnic sites, paved day-use parking area for 400 cars, a new group picnic area that will accommodate 150 people, and restroom and shower buildings. A new marina complex will begin construction during 1987.

At Pyramid Lake, 16 ramadas were constructed at boat-in sites around the lake: Yellowbar, 7; Beartrap, 3; and Serrano, 6. Restrooms were also constructed at the Serrano and Vaquero areas.

Los Angeles County Department of Parks and Recreation completed construction of new Castaic Lake patrol offices and lifeguard towers in July. The department operates the lake's recreation facilities. General improvements and construction of a boat

TABLE 9. RECREATION USE AT SWP FACILITIES IN 1986

storage yard were also completed in summer 1986. DBAW provided two boarding floats at the main boat launching ramp.

At Lake Perris a Junior Ranger Corner, with small amphitheater, for children was completed. This project was developed totally through volunteer efforts. Nearby, at the newly established San Jacinto Wildlife Area, three levees were constructed. Three more levees will be completed in 1987.

Table 9 includes recreation use figures at fishing access sites and recreation developments along the California Aqueduct. Figure 7 shows the location of

these facilities. There are 17 developed fishing access sites along the Aqueduct. Recreation use at these sites and on the California Aqueduct Bikeway in Southern California declined because all but about 20 miles of the 107-mile aqueduct reach in the Antelope Valley area was closed to recreation use because of East Branch enlargement construction. By April 1987 the entire Southern California section of the bikeway was closed because of construction. The closure will remain in effect through the construction period. When construction is completed, a decision will be made regarding the reopening of all or portions of the bikeway.

**FIGURE 7. AQUEDUCT
RECREATION DEVELOPMENTS**

In addition to the regular recreation use, 540,000 visitor-days of use occurred at SWP visitor centers during 1986:

Location	Visitor Days
Project Operations Control Center, Sacramento	500
Oroville Field Division	175,000
Delta Field Division	1,500
San Luis Field Division	210,000
San Joaquin Field Division	3,000
Southern Field Division	<u>150,000</u>
SWP Total	540,000

Fish and Wildlife Activities

The Department of Fish and Game continued its fish planting activities at the SWP facilities during 1986. Table 10 summarizes fish plantings at each location. Total plantings of catchable trout increased about 10 percent over 1985 plantings, but the number of fingerlings planted was only 25 percent of the total planted in 1985.

The Feather River and Thermalito hatcheries produced a total of 11,033,000 fish, down 25 percent from 1985. Of the Chinook salmon produced, 2,573,000 were fingerlings; 5,445,000 were planted as advanced fingerlings; and 1,636,000 were planted as yearlings. A total of 938,000 fingerling steelhead were planted as well as 441,000 yearling steelhead.

CHAPTER III

SWP ADMINISTRATION ACTIVITIES

Along with construction and operation activities, substantial contract administration efforts are necessary to manage the SWP. This chapter summarizes the principal administrative activities during the past year.

Water Contracts Management

Contract Amendments

The 30 long-term water supply contracts have been amended periodically since the 1960s, when the initial contracts were signed. Table 11 shows contract amendments and lists the general content of each amendment. Table 11 does not include revisions to Table A entitlements not in the form of numbered amendments. Amendments executed in 1986 through June 30, 1987, which were not discussed in Bulletin 132-86, are as follows:

- o On June 11, 1986, Solano County Flood Control and Water Conservation District executed Amendment No. 11. The amendment modifies Articles 22 (e) and (g) of the District's contract and revises the procedure for calculating the District's Delta Water Charge. (Solano is the last contractor to sign the amendment to Article 22, thereby standardizing Delta Water Charges calculation for all long-term contractors.) The amendment also defines the amount of water deliveries to the District prior to the North Bay Aqueduct completion as well as modifying the District's Table A entitlements. (This amendment was included in Table 11 of Bulletin 132-86, but no description was given under this section.)
- o On September 15, 1986, San Bernardino Valley Municipal Water District executed Amendment No. 12, providing for its participation in the enlargement of the East Branch of the California Aqueduct.

- o On March 6, 1987, MWDSC executed Amendment No. 21, concerning construction, operation, and repayment of the 300 cfs bypass to the Devil Canyon Powerplant.
- o The water system revenue bond amendment was sent to all long-term water contractors for their signatures on February 5, 1987. As of June 30, 1987, the amendment has been fully executed by 29 of the 30 long-term water supply contractors. City of Yuba City is the remaining unsigned contractor.
- o On May 14, 1987, Kern County Water Agency (KCWA) executed Amendment No. 19, which (1) deletes Amendment No. 7 provisions for taking delivery of an additional 50,000 acre-feet of KCWA's annual entitlement from the Coastal Branch and (2) changes KCWA's Coastal Branch entitlement delivery peak rate from 11 to 16.25 percent.

Relinquished Aqueduct Capacity and Entitlement

In 1981, Santa Barbara County Flood Control and Water Conservation District (SBCFC&WCD) relinquished 17 cfs of Aqueduct capacity and 12,214 acre-feet of associated entitlement water. Bulletin 132-86 (pages 49 and 51) describes the various efforts by DWR to sell the capacity and entitlement water, including SBCFC&WCD's consideration of reacquiring some or all of the entitlement and capacity.

On March 10, 1987, DWR, SBCFC&WCD, KCWA, and Berrenda Mesa Water District (a member unit of KCWA) reached a settlement and compromise agreement which affected the relinquished capacity and entitlement (see "Litigation, Water Supply Contract Cases," this chapter). As part of the agreement, DWR will grant SBCFC&WCD a one-year option to reacquire the capacity and entitlement water relinquished in 1981.

S = Special provisions of basic contract V = Amendment voided by subsequent action

- a) Contract issues covered by these amendments are (1) repayment of "Off-Aqueduct" power facility costs, (2) delinquency penalties, and (3) authority to include other types of projects as additional conservation facilities.
b) RWD special conditions are covered by Amendment Nos. 2, 3, 4, 5, 7, 8V, and 12.

1978 and 1982 Exchange Agreements

In 1978, DWR acquired 30,000 acre-feet of water through an exchange agreement with MWDSC. Under subsequent agreements, KCWA purchased 25,000 acre-feet and Dudley Ridge Water District (DRWD) purchased 5,000 acre-feet. DRWD took delivery of the 5,000 acre-feet in 1985. The remaining 21,547 acre-feet of KCWA's 1978 exchange water is stored within the MWDSC service area.

In 1982, DWR entered into another exchange agreement with MWDSC for 60,000 acre-feet of water. Oak Flat Water District took delivery of 306 acre-feet of water that same year; the remaining 59,694 acre-feet is stored in MWDSC ground water basins or in Lake Oroville. The storage agreements provide that DWR deliver the water stored by MWDSC to the participating contractors while reducing MWDSC's entitlement deliveries by a like amount (MWDSC withdraws this portion of its entitlement from ground water). The water stored in Lake Oroville is available on request, subject to certain limitations.

Both the 1978 and 1982 exchange agreements have been extended several times (see Bulletin 132-84, pages 46-47). The agreement conditions covering the remaining 1978 and 1982 exchange water stored by MWDSC were combined into one three-party agreement among DWR, KCWA, and MWDSC. This combined agreement was extended on March 31, 1987. KCWA now has until May 31, 1992 to take delivery of the water.

The conditions covering the water stored by DWR in Lake Oroville during 1982 for KCWA were included in an agreement between DWR and KCWA. This agreement was also executed on March 31, 1987. Under this agreement, DWR's obligation to deliver the 46,393 acre-feet of 1982 exchange water in Lake Oroville expires on June 1, 1992.

Power Sale to MWDSC

DWR will supply SWP energy to MWDSC to permit MWDSC to maintain an eight-pump flow from the Colorado River. Energy cost to MWDSC will be the lower rate of either the market rate or the Project net melded power rate. The rate will be determined

monthly. Actual energy deliveries began in June 1, 1987.

This one-year agreement is a forerunner of a proposed long-term power exchange agreement. The proposed long-term agreement is still in the development stage, but will be based in part upon a discussion paper presented to the State Water Contractors in November 1986. This discussion paper outlined a proposed power exchange between DWR and MWDSC.

Under this proposal, MWDSC would supply surplus Colorado River Aqueduct power to the SWP, at no cost, to pump MWDSC's entitlement water through the SWP. Such use on the SWP would reduce the power use chargeable to MWDSC for other SWP power resources in an amount equal to the quantity of surplus Colorado River Aqueduct power supplied by MWDSC. If use of this surplus energy resulted in increased annual costs to other SWP water contractors, MWDSC would pay the increased costs.

The proposal also describes SWP power pricing for pumping SWP surplus water and Colorado River Aqueduct water. SWP power resources which were secured for, but exceed, pumping power requirements for entitlement water would be available for pumping SWP surplus water and Colorado River Aqueduct water in the ratio of 20 and 80 percent, respectively. Such power would be priced at the lesser of the market rate or the Project net melded power rate.

Purchase of Delivery Rights Program

Early in 1986, several member units of Kern County Water Agency (KCWA) indicated to DWR the desire to sell some of their delivery rights. The proposed Purchase of Delivery Rights Program was designed to let the SWP buy back the entitlement water in question. If the program was instituted, the selling contractors would be relieved of future costs (both Project and local) associated with these delivery rights.

SWP contractors have expressed varying viewpoints to this proposed program. Three contractors, the Desert Water Agency, Coachella Valley Water District, and Castaic Lake Water Agency, have expressed interest in purchasing the delivery rights. Whatever

the outcome, DWR's primary objective is to protect the financial integrity of the SWP.

The California Water Commission held a hearing about this program on March 2, 1987. DWR, the entities wanting to sell entitlement rights, the agencies wanting to buy additional rights, and other interested parties presented information at this meeting. No further major DWR activity regarding the purchase of delivery rights program has taken place. Kern County is developing a program to keep the water delivery rights within the county.

Coastal Branch, Phase II

The Phase I Coastal Branch facilities were constructed in the late 1960s to serve agricultural water contractors in northwestern Kern County. The Phase I facilities include a 14.8 mile "Coastal Stub" aqueduct, extending from Avenal Gap to the vicinity of Devil's Den, Las Perillas and Badger Hill pumping plants.

Phase II, to be constructed later, would transport SWP water to Santa Barbara and San Luis Obispo County Flood Control and Water Conservation Districts (SBCFC&WCD and SLOCFC&WCD). One alternative alignment would extend approximately 90 miles to a terminus in northern Santa Barbara County near Santa Maria, and would include three or four additional pumping plants and one or two power recovery plants.

After a \$102 million bond issue for the construction of SWP water distribution facilities was rejected by Santa Barbara County voters in March 1979, SBCFC&WCD took two actions. First, SBCFC&WCD voted in 1981 to reduce its maximum annual entitlement from 57,700 acre-feet to 45,486 acre-feet, thus reducing its share of Aqueduct capacity by 17 cfs. Second, SBCFC&WCD evaluated local projects that may qualify for SWP funding under DWR guidelines. As described earlier in this chapter, SBCFC&WCD is considering reacquiring some or all of this Aqueduct capacity and associated entitlement water.

In early 1984, the two districts requested a further two-year delay, until July 1986, for a decision to initi-

ate design and construction of Phase II. In May 1986, SBCFC&WCD and SLOCFC&WCD requested a further delay, until October 1, 1986, of the initiation of preliminary design of, and the EIR preparation for, the Coastal Branch. The agencies made the request to allow time for public hearings and consultation with their member units. DWR approved the delay request.

On October 1, 1986, SLOCFC&WCD requested DWR to initiate the advance planning studies needed to develop the preliminary design and EIR for the Coastal Aqueduct. The EIR and preliminary design should be completed in April 1989. Final design and construction is expected to take approximately four and a half years. Operation of the Coastal Aqueduct could begin as early as fall 1993.

Coordinated Operation Agreement

Representatives of DWR and the USBR signed the Coordinated Operation Agreement (COA) on November 26, 1986. The signing culminated more than 25 years of negotiations between the two agencies regarding water operations in the Sacramento-San Joaquin Delta. This landmark agreement eventually will increase the efficiency of the SWP and the CVP as well as provide important environmental protections in the Delta. The COA's enabling legislation, H. R. 3113, was signed into law by the President on October 27, 1986.

The agreement affirms the primacy of State water law. Under the COA, the CVP is obligated to contribute water to meet Delta water quality standards before making its contracted deliveries. Other basic points of the COA are:

- o Both parties will meet present Delta water quality standards set by the SWRCB. Water quality may fall below Decision 1485 standards only when the Governor declares emergency drought conditions. The USBR will meet future SWRCB standards unless the Secretary of the Interior determines that those standards are inconsistent with Congressional directives; provisions have been made to determine if the new standards apply to the federal project.

- o The State is allowed to purchase interim water from the CVP for SWP contractors pursuant to a contract yet to be negotiated and approved by Congress. DWR estimates the SWP will be able to purchase up to 250,000 acre-feet per year for almost 20 years to help meet SWP needs while the State develops other resources.
- o The USBR is allowed to contract for transportation of federal water to its contractors, via the California Aqueduct, equal to the amount DWR purchases from the federal project. DWR may also convey additional federal water if it does not interfere with SWP supplies or increase water costs to State contractors.
- o The USBR is allowed to sign contracts for sale and delivery of additional CVP water.

San Joaquin Valley Drainage Program

High concentrations of salts and other constituents associated with irrigated agriculture threaten both agricultural production and the environment in the western San Joaquin Valley. These problems have been highlighted in the federal service area where Kesterson Reservoir is located.

DWR is obtaining the necessary data for reuse and disposal studies in the State service area. Trace element analyses are emphasized as well because some of the elements adversely affect water supplies and the environment. DWR also increased surface and ground water monitoring where trace elements might be a problem.

Data collected by the monitoring program are used to evaluate potential sites for commercial sized desalting plants. The data are also used to determine the feasibility of using waste water for irrigation and wildlife marshes.

DWR is closely following the U. S. Department of the Interior's agricultural waste water management and disposal studies of its San Luis Drain system. Problems with fish and waterfowl in the area demonstrated the need for further studies to define agricultural waste water management and disposal alternatives. DWR representatives serve on several com-

mittees and advisory groups connected with these studies.

The USBR submitted to the SWRCB a plan for phasing the closure of Kesterson Reservoir. The SWRCB rejected the phased closure, but approved an on-site disposal plan with monitoring and mitigation measures. The Regional Water Quality Control Board will adopt waste discharge requirements for the USBR's onsite disposal plan. The USBR has a year to construct on-site facilities after adopting the waste discharge requirements.

Los Banos Demonstration Desalting Facility

The long-term alternatives for disposing of agricultural drainage water have been reduced to land disposal, treatment, or land abandonment. More efficient management of irrigation and drainage reduces the amount of disposable drainage water; it does not eliminate the need for disposal. The operations at the Los Banos Demonstration Desalting Facility investigated the technology and economics of reclaiming drainage water by desalting. The systems operated at Los Banos have the potential for reducing costs of this type of treatment.

The plant began operation in the fall of 1983. The principal area of investigation during 1984 and the first half of 1985 was pretreatment for the removal of suspended solids and silica. During the second half of 1985 and the first half of 1986, the principal areas of investigation were ion-exchange softening, reverse-osmosis and vapor-compression evaporator desalting, and solar salt-gradient pond operation.

During spring 1986, Westlands Water District (WWD), as part of its agreement with the U. S. Department of the Interior, reduced its drainage water flow into the San Luis Drain. WWD ceased its drainage water flow in June 1986, and one month later, the USBR discharged fresh water from the Delta-Mendota Canal into the San Luis Drain for use at Kesterson Reservoir in northern Merced County. As a result of the USBR's action, the Los Banos Demonstration Desalting Facility ceased operation in August.

The Los Banos shutdown became permanent in December 1986 after it became apparent that new supplies of drainage water could not be obtained. Only

the vapor compression evaporator and the solar salt-gradient ponds continued operating. The former was operated to concentrate remaining brines on-site for use in the heat storage zone of the solar pond. Only the solar pond system remains active.

An evaluation of operations data from the Los Banos facility shows that the pretreatment systems require additional work. Although the systems are capable of producing desalting unit feedwater that meets the normal criteria for the turbidity and silt density index used by membrane suppliers, etc., unacceptable rates of membrane fouling still occurred. The ion-exchange softening and the reverse-osmosis and vapor-compression evaporator desalting units all operated as predicted (except for the fouling of the reverse-osmosis membranes, which is the fault of the pretreatment system, not the membranes). The solar pond system also operated as expected.

The premature shutdown of the Los Banos facility left much work to be done before the feasibility of a SWP desalting facility could be established. To complete the work, a smaller new facility is being planned for establishment at the site of WWD's new selenium removal plant being constructed near Mendota. The new facility will be operated by WWD under contract with DWR. Facility operations will concentrate on (1) improving pretreatment system performance, (2) testing several new approaches to pretreatment, (3) testing the ion exchange water-softening system to establish the operating limits of using desalting brine for regeneration, and (4) operating several small reverse osmosis units for confirmation of pretreatment performance and testing of operations at high levels of calcium concentration. A solar pond of at least 4 acres at Mendota also is proposed as a followup to the successful Los Banos pond.

Equipment installation at Mendota is expected to begin in late 1987. The pretreatment system should begin operation in early 1988, and the remainder of the systems should begin operation later in 1988.

Project Purpose Cost Allocations

Appendix D to Bulletin 132 reports the costs associated with recreation and fish and wildlife enhancement for the SWP. SWP capital costs allocated to

recreation and fish and wildlife enhancement through 1985 are updated in Appendix D to Bulletin 132-86. The appendix reported an additional \$5,180,551 for recreation and fish and wildlife. The appendix reported an additional \$5,180,551 for recreation and fish and wildlife over that amount reported in Appendix D to Bulletin 132-85. Appendix D to Bulletin 132-86 was submitted to the Legislature in July 1987. If the Legislature approves the reported costs, a like amount of the State's tideland oil and gas revenues are to be released to DWR from funds specifically authorized for that purpose.

Two Agency Fish Agreement

More than seven years of negotiations between DWR and the Department of Fish and Game (DFG) came to a close when a Delta fish protection agreement was signed on December 30, 1986. This agreement was developed by an ad hoc committee consisting of DWR and DFG staff, representatives of the State water contractors, and representatives of major fishery and environmental organizations. The agreement is to offset direct losses of fish, mostly striped bass, chinook salmon, and steelhead, caused by SWP operation of the Banks Delta Pumping Plant. It was not the intention of the signing agencies to cover fish losses which occurred prior to 1986 in the agreement.

The agreement establishes a procedure to calculate direct losses of some species of fish on an annual basis. Direct fish losses are defined as losses which occur from the time fish are drawn into Clifton Court Forebay until the surviving fish are returned to the Delta. Despite fish screens currently installed at the pumping plant, losses are still substantial.

Under this new agreement, DWR will make annual payments to DFG. The payments will be used to evaluate fish losses and identify projects to increase fish production. The annual payments are estimated to be between \$0.5 to \$2 million. In addition to these annual payments, the SWP contractors will provide up to \$15 million to institute a program to quickly increase Delta fish populations.

DWR and DFG will give priority to measures designed to protect or improve fish habitat and to preserve the genetic diversity of fish stocks. Other possible pro-

Sampling of fish screened from the Banks Delta Pumping Plant. The fish agreement will establish further fish protection measures.

jects include new fish screens, river barriers, feeder stream habitat improvements, and/or other upstream improvements. If fish hatcheries are chosen as options, wild brood stock will be used to preserve fish genetic diversity.

The agreement is also seen as an integral step in the process leading to installation of the four additional pumps at the Banks Delta Pumping Plant. One of several benefits of the new pumps would be the ability to increase pumping during seasons when the chances of fish losses are lower.

Water Rights Management

The SWP operates in the Delta under conditions set forth in the SWRCB's Decision 1485. Issued in August 1978, the Decision 1485 conditions are to remain in effect until the SWRCB issues new standards in 1990. Decision 1485 resulted in coordination of terms for SWP and CVP water rights permits and establishment of Delta water quality standards to ensure protection of water rights and fish and wildlife resources. Decision 1485 requires implementation of a program to monitor Delta water quality. The monitoring program and associated special studies

conducted by DWR have contributed to a better understanding of the effects of SWP operation on the ecology of the Delta.

On July 7, 1987 the SWRCB began a three-year review process to reconsider water quality objectives designed to protect beneficial uses of the Bay-Delta estuary. The SWRCB will review the Water Quality Control Plans for the estuary (the Sacramento-San Joaquin Delta, Suisun Marsh, and San Francisco Bay) and Decision 1485, which places conditions on SWP and CVP water rights permits to protect the Delta and Suisun Marsh.

The review process has three phases. The first two phases involve hearings and adopting revised Water Quality Control Plans. The third phase will address implementing the water quality objectives, through conditions in water right permits within SWRCB jurisdiction, of the revised Water Quality Control Plans. For the first time, the SWRCB will consider the responsibilities of other water users, in addition to the SWP and CVP, in protecting the Bay-Delta estuary.

Delta Water Quality Monitoring and Reporting

DWR continues its extensive monitoring program in the Sacramento-San Joaquin Delta and the Suisun Marsh. A network of 27 discrete sites are sampled biweekly for a variety of physical, chemical, and biological constituents. This is supported by six multi-parameter, continually operating, shoreline installations. Continuous water quality profiles of the main channels are also recorded biweekly, using instrumentation aboard DWR's laboratory work boat, the San Carlos. DWR also maintains a network of continuous electrical conductivity and stage recorders throughout the Suisun Marsh, and determines soil chemistries at 51 representative sites, as provided in the Suisun Marsh Plan of Protection.

Compliance with Decision 1485 also requires supplemental studies of the San Francisco Bay ecosystem's freshwater outflow needs. The objective is to separate the effects of Delta outflow from other major influences on the Bay, such as waste discharges and shoreline development.

Water quality information generated from these programs is electronically processed and stored on the

Environmental Protection Agency's "Storet"; and DWR's Water Data Information System. Tabulations of basic data and an evaluation report are submitted for annual SWRCB review. Copies of 1975 through 1985 reports are still available. DWR's special studies in 1986 included continued intense monitoring of the Central Delta. These studies are to assess and measure factors controlling phytoplankton growth, which is the first link in the Delta aquatic food chain.

Suisun Marsh

Suisun Marsh, in southern Solano County, consists of about 116,000 acres. The marsh supports as many as 200 species of wildlife ranging from the rare and endangered salt marsh harvest mouse to the great tule elk. Brackish marshes are more desirable than salt marshes because the less salty water fosters plants and habitat for various wildlife, especially wildfowl.

The salinity of the marsh affects the wildlife food chain and marsh salinity is affected by the outflow from the Sacramento-San Joaquin Delta. Therefore,

in 1978, the SWRCB adopted its Decision 1485 to establish standards to protect the beneficial use of Delta water including the Marsh. Decision 1485 required the SWP and the CVP to develop a plan to meet specified water quality standards within the marsh, including physical facilities, a monitoring network, and operating procedures. Initial facilities were to be completed by January 1980 and the plan was to be implemented by October 1984.

The Initial Facilities include improvement to Roaring River Slough, construction of the Morrow Island Distribution System, and construction of the Goodyear Slough Outfall Structure. The facilities became operational in 1981, and the work was completed in 1983, with construction of the Roaring River Slough fish screens.

The coordinated protection plan for Suisun Marsh water quality was developed, as stipulated by Decision 1485, by the Suisun Marsh Technical Committee of the Interagency Ecological Study Program for the Sacramento-San Joaquin Estuary. The Plan of Protection, published with an EIR in 1984, includes:

The Suisun Marsh is one of the last remaining major wetlands in the United States

- o a program to construct (as required) a major tidal pumping station, three conveyance channels, and one additional distribution system; and
- o a system to monitor compliance with water quality standards and measure the performance of the facilities constructed. The monitoring plan has been implemented.

A key part of the Marsh Plan of Protection is the Suisun Marsh Salinity Control Gates (SMSCG). The gates will help maintain the marsh's brackish character by allowing water flow into Montezuma Slough when flow in the slough is westward, and closing on the eastbound tide to trap the fresher water in the slough.

During 1986, a construction contract was awarded for the SMSCG. The control gates will be located adjacent to the Roaring River Slough Intake. Scheduled completion date is July 1988. After its completion, SMSCG will be tested for effectiveness in meeting the specified water qualities; additional features will be built as needed.

In November 1985, the USBR, DWR, Department of Fish and Game, and Suisun Resource Conservation District concluded negotiations on the Suisun Marsh Preservation Agreement. The agreement includes definitions of Marsh water quality standards and construction staging, as well as the details for implementing the Plan of Protection. In late 1986, USBR received Congressional authorization to sign this and two collateral agreements defining mitigation and monitoring activities. These agreements were signed in March 1987.

In December 1985, at the request of the USBR, the SWRCB agreed to defer application of Decision 1485 standards until 1988. The standards will then be phased in on a schedule similar to the one in the agreement.

Western Delta Municipal Water Users

Two contracts are in effect for replacement of municipal water supplies in the Antioch-Pittsburg area (Bulletin 132-67, page 20). The first, signed April 21, 1967, is with the Contra Costa Water District (CCWD) for its municipal water diversion at Mallard

Slough near Pittsburg; the second, signed April 11, 1968, covers use by the City of Antioch.

Each contract provides that DWR compensate each entity for its additional costs of purchasing a substitute water supply from the Contra Costa Canal to replace offshore supplies lost because of SWP operation. Credits for above-average offshore water supplies accrue to offset below-average days in future years.

Both agencies had below-average water supplies during the 1986 water year as defined in the contracts. During the 1986 water year, water of usable quality was available to CCWD for 103 days, compared to the contract standard of 142 days. For the City of Antioch, usable water was available for 151 days, compared to the standard of 208 days. The deficiencies (39 days for CCWD and 57 days for Antioch) were offset by credit days accumulated during prior years of above-average supplies. These subtractions reduced the credit balances of CCWD and Antioch to 235 days and 291 days, respectively, at the end of the 1985-86 water year.

Western Delta Industrial Water Users

Several industries near Antioch and Pittsburg use offshore water for both processing and cooling. When offshore water quality is below the industries' requirements, the Contra Costa Canal provides a substitute supply. These industries have not agreed to participate in contracts similar to those signed by municipal interests. The reasons cited include (1) belief that the SWP should provide compensation for all loss of offshore water regardless of who is responsible, and (2) desire that the SWP guarantee the quality and quantity of Contra Costa Canal water when it is used as a substitute supply.

DWR is continuing negotiations on water entitlement contracts with Western Delta Industries. The companies are Louisiana Pacific-Fibreboard and Gaylord Containers, Inc. (previously named Crown Zellerbach). Negotiation activities include technical studies and meetings to define contract provisions and formulate contract language. Draft contracts have been developed and are under review.

Delta Agricultural Water Users

For more than a decade, DWR has sought to contract with Delta agricultural agencies for the SWP to meet water quality standards necessary for reasonable beneficial uses throughout each agency's respective area, with relaxation of these standards during dry and critical years. In return, the agencies would make annual payments for services in excess of any SWP mitigation obligation.

Beginning in 1974, six agencies representing agricultural water interests in the Delta replaced the Delta Water Agency, which ceased to exist December 31, 1973. In 1981, contracts were executed with the North Delta Water Agency and East Contra Costa Irrigation District. Negotiations with the other agencies were inactive for several years until 1984, when the Central Delta Water Agency (CDWA) and South Delta Water Agency (SDWA) both indicated an interest in reopening negotiations. Negotiations with CDWA and SDWA are now proceeding.

South Delta Activities

SWRCB Decision 1485 did not establish water quality standards for the southern Delta because insufficient information was available, and because negotiations among the USBR, SDWA, and DWR were under way. If negotiations were not successful by January 1, 1980, the SWRCB was to have intervened. However, this date has been repeatedly extended at the request of all parties, even though SDWA has filed suit against the SWRCB for failing to include southern Delta standards in Decision 1485.

Following a March 1982 workshop, the SWRCB informed SDWA that it must petition the SWRCB if it wishes any motion regarding the adoption of standards. SDWA responded by criticizing this position, restating its position that the SWRCB must adopt standards for the southern Delta, and stating that negotiations had come to an impasse.

SDWA filed a lawsuit against DWR and the USBR in July 1982. The lawsuit is over the effects of SWP and CVP operations on water quantity and quality in the southern Delta. The parties have been actively negotiating since then, and in 1986 SDWA, DWR, and

USBR signed an agreement. Several actions resulted from this agreement: (1) the lawsuit was postponed, (2) negotiations began for a permanent solution to mitigate CVP and SWP impacts upon South Delta agriculture, and (3) the USBR agreed to provide certain qualities and flows in the San Joaquin River at Vernalis. In June 1986, DWR and SDWA agreed to implement the Interim South Delta Agricultural Water Level Mitigation Project to help solve the region's water supply problems.

Among the impacts of CVP and SWP operations claimed by SDWA is a water level reduction in some south Delta channels. Low water levels have, at times, prevented diversions of sufficient amounts of irrigation water. The agreement provides, among other things, a schedule for operating Clifton Court Forebay intake gates. This schedule will help avoid water intake during those tide stages that would affect the local farmers' irrigation pumping ability.

The diversion problem in Tom Paine Slough (Bulletin 132-86, page 21) is another area of concern, as is the land south of Highway 4, which receives irrigation water from Middle River.

Under the mitigation project agreement, the Pescadero Reclamation District, which diverts water from the Tom Paine Slough, contracted with Dutra Construction Company to dredge the slough. DWR paid for the dredging to remove accumulated sediment which impeded water flow to the District's diversion pumps. The work was completed in October 1986.

In May 1987, DWR placed a weir with tide gates in Middle River. The weir was installed during irrigation season to alleviate water supply problems, caused by low San Joaquin River flows and sometimes by SWP operations, in Middle River between Old River and Victoria Canal. The weir will be removed in the fall before winter flood flows begin.

Also as part of the agreement, SDWA will release claims against DWR for water level damage caused by Project operations in the south Delta. This release will be in effect during the length of the agreement.

The agreement is an interim solution. Both agencies, with the USBR as third party, expect a permanent solution within the next five years.

Davis-Grunsky Act Program

The Davis-Grunsky Act provides funding for loans and grants to public agencies for construction of local water projects. As companion legislation to the Burns-Porter Act, the Davis-Grunsky Act was passed by the Legislature in 1959. Of the original \$1.75 billion provided by the Burns-Porter Act to construct the State Water Resources Development System, \$130 million was reserved specifically for distribution under the Davis-Grunsky Act. Funding is drawn from the California Water Resources Development Fund and the California Water Fund. Repayment of loans is made to the California Water Resources Development Fund.

Under the program established by the Davis-Grunsky Act, financial assistance is given to local agencies to (1) overcome and avoid public health problems in their water supplies, (2) develop new water supplies, and/or (3) encourage development of public recreation and fish and wildlife enhancement. Program funds are also available for feasibility report preparation. Under certain circumstances, the State may participate as a partner with an applicant. Any city, county, district, or other political subdivision of the State is considered an eligible local agency. Mutual water companies or other private organizations and individuals are not eligible. Eligibility is also based upon conformance with the California Water Plan and statewide benefit; if a loan is requested, inability to finance from other sources is also considered.

The Davis-Grunsky Act is administered jointly by DWR and the California Water Commission, under policies and procedures set forth in the California Administrative Code, a Joint Statement of Policies, and the Davis-Grunsky Act itself.

The seven specific types of assistance available to local agencies are:

- o grants for part of the construction cost of any dam and reservoir properly allocated to recreation;
- o grants for construction of initial water supply and sanitary facilities needed for public recreational use of the reservoir;
- o construction loans for local water projects;

- o loans for acquisition of reservoir sites for proposed water projects;
- o loans for feasibility reports about proposed projects for which construction loans are requested and/or;
- o State participation as a partner in a project larger than one the local agency proposes to construct on its own.

When the program began, loans were made at the current market interest rate at the time of the loan, which caused the rate to vary from loan to loan. To be more equitable to the low-income agencies the program was designed to assist, the interest rate was changed to an overall rate of 2.5 percent, with a maximum repayment period of 50 years. In some instances, at the discretion of DWR, agencies were given an initial 10-year deferment on loan payments. The accumulated interest was then amortized over the repayment period.

Through December 31, 1986, approximately \$118 million of the \$130 million allocated under the Burns-Porter Act was disbursed for loans, grants, and administrative costs. During 1986, DWR distributed \$1,595,000 of loan funds and \$429,490 of grant funds under the Davis-Grunsky Act program.

Principal actions under the Davis-Grunsky Act program in 1986 were:

- o Home Gardens County Water District, San Bernardino County, submitted a formal application for a water supply and distribution system. The application was approved, and the District received its first disbursement of \$1,595,000. Estimated cost of the project is \$2.5 million.
- o San Bernardino Valley Municipal Water District, San Bernardino County, received the final \$429,490 of a recreation grant for its Yucaipa Project. The total authorized grant was for \$4,283,250.
- o Strathmore Public Utility District, Tulare County, applied for a \$2.2 million construction loan. The formal application and feasibility report, along

with DWR's Report of Findings, were approved in 1986 by the California Water Commission. The loan would partially finance construction of a \$3.0 million project to provide drinking water to the community of Strathmore and adjacent lands. A combination of funds from the Davis-Grunsky Act Program and the Safe Drinking Water Bond Act of 1984 is proposed for the project.

- o Littlerock Creek Irrigation District, Los Angeles County, is expected to submit a formal application for a \$2.0 million construction loan. The proposed loan is for the upgrading and expansion of the water distribution system to serve the community.
- o Applications for projects by San Lorenzo and Grass Valley, totaling \$5 million, have been withdrawn.

DWR has not accepted any new applications for financial assistance under the Davis-Grunsky Act since 1981. This decision was made because the applications at the time, if approved, would have exceeded the remaining funds. Most of those applications were processed in the past five years.

The Davis-Grunsky program will not immediately reopen. The program's reopening will be delayed until the funding needs of Littlerock Dam are identified. (Littlerock Dam does not meet earthquake safety standards and was a consideration when the Legislature amended the Davis-Grunsky Act in 1976 to permit dam rehabilitation within the State assistance to local projects programs.) Funding for Bear Valley Dam, to meet earthquake standards, is another consideration in delay of reopening the Davis-Grunsky program.

State Legislation

No major water bills were introduced during 1986. However, several bills of interest were passed and signed by the Governor. These include:

- o AB 1658 (Isenberg): Each agricultural water supplier will be required to prepare an information report to determine whether their district has a significant opportunity to save water. A district which

determines it has such an opportunity will be required to prepare and adopt an agricultural water management plan. Chapter No. 954 of 1986.

- o AB 1982 (Costa): Provides \$150 million in low interest loans to local agencies for water conservation, ground water recharge, and drainage projects. Of the \$150 million, \$75 million is for water conservation and ground water recharge loans to be administered by DWR; \$75 million is for agricultural drainage loans to be administered by the SWRCB. Chapter No. 6 of 1986. (Approved by voters in June 1986.)
- o AB 2010 (Isenberg): Authorizes the DWR Director to negotiate with the USBR for the State to own or operate part or all of the federal Central Valley Project. Chapter No. 1384 of 1986.
- o AB 2746 (Katz): Requires a state or local public agency owning a water conveyance facility to allow another local agency to use 70 percent of the facility's unused capacity to transfer water to a purchaser, if the transferor pays fair compensation for using the facility. Chapter No. 918 of 1986.
- o AB 3722 (Costa): Requires DWR to establish a program to facilitate the voluntary exchange or transfer of water. Chapter No. 970 of 1986.
- o SB 1700 (Torres): Requires DWR to negotiate with the USBR for the purchase and transfer of water. Chapter No. 1241 of 1986.

Federal Legislation

Two major water related House Resolutions (H.R.) were passed by Congress and signed by the President in 1986.

H. R. 3113 authorizes the Secretary of the Interior to enter into two agreements, (1) a coordinated operation agreement for the operation of the federal CVP and the SWP, and (2) a Suisun Marsh preservation agreement between the State, the federal government, and the Suisun Resource Conservation District. H. R. 3113 also authorizes an appropriation of \$50 million to carry out the Suisun Marsh agreement. P. L. 99-546.

H. R. 6 authorizes several flood control and fish and wildlife mitigation projects and studies in California. H. R. 6 also establishes new cost-sharing and funding formulas for project construction. P. L. 99-662.

Litigation

The following are summaries of the principal litigation involving DWR during the report period:

Control Over SWP Operations

Department of Water Resources v. Contra Costa County Water Agency, et al., filed June 22, 1979, San Francisco Superior Court No. 765609. This suit was filed by DWR against the Contra Costa County Water Agency, North Delta Water Agency, Central Delta Water Agency, South Delta Water Agency, Byron Bethany Irrigation District, City of Vallejo, Union Properties, and several landowners in the Delta. It sought a declaratory judgment that the defendants must contract with DWR and pay for SWP water used in excess of water which would be available in the absence of the SWP. The suit also sought money damages to compensate DWR for water illegally used during July and August of 1977. DWR's actions were based upon quasi-contract and statutory obligations (Burns-Porter Act, Central Valley Project Act, Delta Protection Act, and Watershed of Origin Statutes). The parties agreed to dismiss the suit without prejudice on December 5, 1986.

South Delta Water Agency (SDWA) v. United States, et al., filed July 9, 1982, Federal District Court for the Eastern District of California CIV S-82-567 MLS, by SDWA against the United States, the Department of the Interior, the USBR, and DWR. It involves the effects of the CVP and SWP on the southern Delta and the Department of the Interior's designation of the New Melones Reservoir service area.

SDWA alleges (1) that CVP operations in the San Joaquin River unlawfully reduce the quantity and diminish the quality of water flowing in the San Joaquin River to the southern Delta; (2) that operation of the CVP and SWP pumps violates southern Delta rights by lowering water levels, reversing flows, and diminishing the influence of the tides; and (3) that the Secretary of the Interior's designation of the "Stanislaus

River Basin" for purposes of allocating water from New Melones Reservoir violates southern Delta rights by not including the southern Delta in the basin. SDWA asks for declaratory and injunctive relief.

The United States and the plaintiff settled plaintiff's Motion for Preliminary Injunction (to enjoin the United States from signing contracts for New Melones water) by stipulating that any contracts entered into by the United States are subject to any superior rights in the southern Delta which are determined in this litigation. Further activity has been postponed indefinitely while the parties attempt a negotiated settlement.

Delta Water Cases

United States of America v. State Water Resources Control Board, filed November 13, 1978, Court of Appeal, First Appellate District, Division One, No. A027690. This and seven other cases were brought to challenge SWRCB Decision 1485, which establishes conditions of water rights permits of the SWP and CVP and the SWRCB's revised water quality control plan for the Delta and Suisun Marsh. Six other cases were brought to invalidate the EIR on which Decision 1485 and the revised water quality control plan are based.

DWR was either a real party in interest or an intervenor in all of these cases, in which the Attorney General authorized DWR to represent itself. The cases were coordinated. On April 24, 1981, the court bifurcated the EIR cases from those that challenged Decision 1485 on its merits. The EIR cases were stayed until final judgment on the merits case.

The trial court issued a decision on April 13, 1984, ruling generally that SWRCB failed to proceed in the manner required by law and failed to support Decision 1485 and the plan with adequate findings. The decision was appealed and the Court of Appeal issued its decision on May 28, 1986.

The appellate court ruled that the SWRCB has broad authority to condition the water rights permits of the SWP and CVP. It also ruled that the SWRCB may limit diversions from the Delta by the State and federal projects to protect agricultural, municipal, and industrial water supplies in the Delta and to protect fish,

wildlife, and other aspects of the environment in the Delta, Suisun Marsh, and San Francisco Bay. The court relied on a 1983 California Supreme Court decision to allow the SWRCB to apply the public trust doctrine to diversions for the SWP.

The California Supreme Court refused to review the Court of Appeal decision.

Seepage Suits

During 1975 and 1976, several suits were filed against the State and the United States by more than 25 landowners adjacent to the Sacramento and Feather rivers for damages alleged to have been caused by erosion and seepage in March and April of 1974. The plaintiffs claim damages in excess of \$30 million, resulting from operation of the CVP and SWP.

One such case is H. S. Sanborn, et al. v. United States, filed March 22, 1976, U. S. District Court CI 5-76-154, a complaint in inverse condemnation, negligence, and trespass. The claim arises from damages allegedly caused by high flows in the Sacramento River during March and April of 1974 at the time of a heavy and late storm. The levels were partially controlled by releases from Shasta Lake and diversions from the CVP's Trinity River Division. The plaintiffs contend that the USBR kept the river levels high for an extended period, causing erosion and seepage that damaged their orchards and crops. The plaintiffs also sued the State, claiming that DWR participated as a joint venturer in the planning and operation of the CVP.

In May 1984, the U. S. Court of Claims rejected the claim against the United States, on the ground that a one-time flooding is not a taking of a property right in inverse condemnation.

Plaintiffs then turned to the State courts, seeking a summary judgment on the ground that DWR was a joint venturer with the United States in the CVP, and that flood control operations were a joint responsibility. Identical actions were initiated in Colusa County and Sutter County, and denied on April 23, 1985, and April 30, 1985, respectively.

Plaintiffs continue to pursue a theory of negligence and inverse condemnation in the State courts. The

first case (John E. Baird, et al. v. State) may be tried in the fall of 1987.

February 1986 Flood Cases

Claims for over \$3 billion were filed with the California State Board of Control against State agencies, including DWR, for damages arising out of levee failures and flooding in areas of the Sacramento Valley during February 1986. The Board of Control denied the claims. Since SWP operations do not appear to have any causal connection to such levee failures or flooding, DWR believes that SWP liability is unlikely.

Kern River Intertie

River West, Inc. v. State of California, et al., filed August 5, 1980, in San Francisco and transferred to Kern County Superior Court, No. 174778. This case involves water rights, operation of the Kern River Intertie, and the operation of the California Aqueduct. The plaintiffs have sued DWR, upstream landowners on the Kern River, and local water agencies, alleging infringement of the riparian and appropriative water rights of the plaintiffs. Plaintiffs contend, as to DWR, that water other than flood water is being accepted into the Intertie contrary to the Intertie's flood control purpose. The plaintiffs originally wanted an injunction and declaratory judgment. Now they have amended their complaint to add a count relating to damages for inverse condemnation.

On December 29, 1982, a related case, Kern Property Corporation v. State of California, acting through Department of Water Resources, et al., Kern County Superior Court No. 181265, was filed. DWR and the other defendants have filed their answers, but it is likely this action will be held in abeyance until the River West litigation is completed.

Electrical Power Cases

Southern California Edison Company (SCE) v. Los Angeles Department of Water and Power (LADWP), et al., filed October 18, 1979, Los Angeles Superior Court, No. C-301654. This suit was filed by SCE to compel LADWP to continue to meet its obligation to supply DWR with electrical power under the Suppliers Contract. LADWP has claimed that under the doctrine of commercial impracticability, it is entitled to

be excused from its obligations under this contract. LADWP had earlier given notice to DWR that, unless DWR paid a higher price for the power than that set forth in the contract, it would no longer provide DWR with service. After DWR refused to deviate from the terms of the Suppliers Contract, LADWP informed DWR and the other parties to the contract that it would terminate service as of October 21, 1979. The Pacific Gas and Electric Company (PGandE) and the San Diego Gas and Electric Company, suppliers under the contract along with SCE and LADWP, are defendants in the lawsuit. DWR intervened in the case.

On November 7, 1979, a preliminary injunction was issued requiring LADWP to continue supplying power under the Suppliers Contract. LADWP continued supplying power to DWR until termination of the Suppliers Contract in 1983. The case is in the discovery stage.

MCR Geothermal Corporation and Entex Energy Operations, Ltd. v. State of California, filed August 28, 1985, Sacramento Superior Court, No. 332642. The plaintiffs filed a complaint against DWR for \$9.5 million. They claim they are owed this sum because DWR failed to have Bottle Rock Powerplant ready by the scheduled commercial operating date. DWR filed a cross complaint against MCR for recovery of damages sustained at the unit due to impurities in the steam delivered shortly after startup. The cross complaint also seeks liquidated damages for MCR's inability to deliver sufficient steam to operate the power plant at 55 MW. Discovery is in process. DWR and MCR entered into a memorandum of understanding, which provides a framework for a possible negotiated buyout of MCR's interests in the Geysers area and settlement of the case. Settlement negotiations have not yet been successful.

Water Supply Contracts

San Luis Obispo County Flood Control and Water Conservation District (SLOCFC&WCD) v. State of California, filed July 26, 1982, San Luis Obispo County Superior Court, No. 56635. In 1971, DWR agreed to an amendment to the water supply contract with Kern County Water Agency (KCWA) allowing KCWA to shift delivery of 50,000 acre-feet of entitlement water from the main aqueduct to Reach 31A

on the coastal stub. The delivery was to be made within the existing capacity already allocated to KCWA in the coastal stub. The contract amendment provided that costs would not be reallocated provided that the change in deliveries did not cause an increase in costs to any other water contractor.

SLOCFC&WCD claimed that as a result of KCWA's increased entitlement deliveries through Reach 31A, DWR should have recalculated the proportionate use of facilities factors for that reach and should have reduced the charges to SLOCFC&WCD. Santa Barbara County Flood Control and Water Conservation District filed a similar suit, Santa Barbara County Flood Control and Water Conservation District v. State of California, filed August 4, 1982, Santa Barbara County Superior Court No. 142195.

The State cross complained against KCWA. KCWA filed a cross complaint against the State, SLOCFC&WCD, and Berrenda Mesa Water Storage District for an adjudication of rights under the various contracts involved.

In early 1987, the parties worked out the following settlement agreement: DWR paid SBCFC&WCD \$260,000 and SLOCFC&WCD \$200,000. KCWA agreed to pay DWR a total of \$130,300 over a period of five years. DWR and KCWA agreed to rescind the contract provision that allowed the permanent shift of 50,000 acre-feet annually of entitlement deliveries from the main stem of the California Aqueduct to the Coastal Branch. DWR agreed to apply for the water rights permits for the Cachuma Reservoir enlargement and to allow SBCFC&WCD an additional year to decide whether to reacquire all or part of its previously relinquished Aqueduct capacity, associated entitlement water, and associated suspended costs. Both suits have been dismissed with prejudice.

Antelope Valley-East Kern Water Agency v. Local Agency Formation Commission of Los Angeles County, filed April 9, 1987. Residents of the Aqua Dulce area sought to detach the area from the Antelope Valley-East Kern Water Agency (AVEK), a water service contractor with the SWP. The Local Agency Formation Commission of Los Angeles County (LAFCO) approved the detachment and terminated the obligation of the residents to pay taxes for the

pre-existing bonded indebtedness of AVEK. LAFCO further did not require the detachment to be approved by DWR as the water supply contract with AVEK requires. AVEK challenged the detachment insofar as it did not require the area residents to remain subject to taxes for the pre-existing bonded indebtedness. DWR intervened on the side of AVEK. Castaic Lake Water Agency, Crestline-Lake Arrowhead Water Agency, and Desert Water Agency joined as friends of the court.

On May 22, 1987, the trial judge ruled that the LAFCO detachment order was invalid. On June 18, 1987, the trial judge issued a peremptory writ of mandate requiring LAFCO to set aside its action and to reconsider the detachment proposal in light of the court opinion. No appeal has yet been filed.

Condemnations

State of California v. Norman P. Andresen, et al., filed December 4, 1981, Merced County Superior Court. This case involves condemnation of 689 acres of property adjacent to San Luis Dam for repair and maintenance purposes. The property includes a rock quarry. The State's appraisal was \$248,000.

On June 27, 1985, Merced County Superior Court rendered judgment for \$3.2 million plus interest, costs, and attorneys' fees to the defendants. Subsequently, prejudgment interest was stipulated to be \$1.5 million and, on September 5, 1985, the court awarded an additional \$1.1 million in attorneys' fees and \$87,000 in court costs to the defendant. The State has appealed.

CHAPTER IV
DESIGN, RIGHT OF WAY, AND CONSTRUCTION ACTIVITIES
JULY 1, 1986 THROUGH JUNE 30, 1987

This chapter discusses the design, right of way, and construction work within the SWP construction divisions shown in Figure 8. A summary of DWR's program for safety review of SWP facilities is also included.

Design Activity

Table 12 summarizes the principal SWP design activities during the report period. Of these, the following were most significant in terms of design effort.

Harvey O. Banks Delta Pumping Plant

Plans and specifications for the additional pumping units at the Banks Delta Pumping Plant were completed and the bids were opened on June 17, 1987. Design work also began on contracts for the pump discharge valves, plant overhead bridge crane, and a new service bay. Completion of the four new units will require 10 separate construction contracts. Initial start up for the first two units is scheduled for April 1991.

Design was also completed and bids opened for a new warehouse and welding building at the Delta O&M Center.

North Bay Aqueduct, Phase II

The main features of the North Bay Aqueduct, Phase II are the pumping plants at Barker Slough and Cordelia Forebay and 23 miles of pipeline. Most of the design work required for project contracts is complete. Between July 1986 and June 1987, completed design work for project contracts included: switchgear, transformers, and circuit breakers for both pumping plants; the Barker Slough air chambers and Travis surge tank; the fiber optics communication facilities; and dredging Barker Slough. Planned operational date for the North Bay Aqueduct, Phase II is November 1987.

**FIGURE 8. SWP
CONSTRUCTION DIVISIONS**

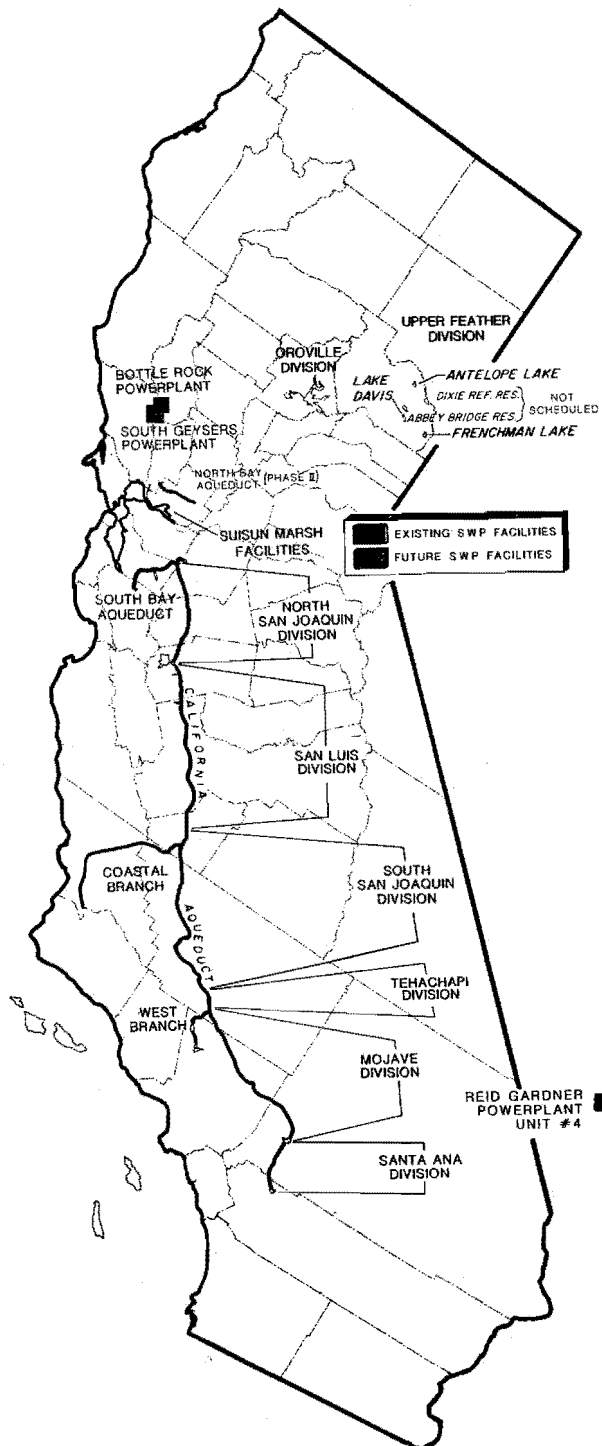

TABLE 12. SWP DESIGN ACTIVITY IN PROGRESS, JULY 1986—JUNE 1987

Division or Facility	Activity	Begin Design	Complete Design
Energy Supply	Bottle Rock Powerplant Turbine Rotor Refurbishing	Dec. 1986	(a)
	South Geysers Powerplant Completion	Aug. 1981	(b)
North Bay Aqueduct	Barker Slough Air Chambers and Travis Surge Tank	Mar. 1986	Sep. 1986
	Barker Slough Dredging	Jul. 1985	Apr. 1987
	Monitor and Control System		
	Fiber Optics System	Jan. 1986	Mar. 1987
	Control System	Jan. 1986	Oct. 1987
	Barker Slough Microwave Tower	Jun. 1987	Sep. 1987
	North Bay Aqueduct Plants		
North San Joaquin Division	Switchgear	Apr. 1985	Sep. 1986
	Power Transformers	Apr. 1985	Sep. 1986
	115-kV Circuit Breakers	Feb. 1986	Sep. 1986
	Harvey O. Banks Delta Pumping Plant		
	Service Bay	Feb. 1987	Apr. 1988
	Pumps	Jan. 1987	Mar. 1987
	Valves	Apr. 1987	Mar. 1988
	Overhead Crane	Mar. 1987	Sep. 1987
	Delta O&M Center		
	Warehouse and Welding Building	Sep. 1986	Mar. 1987
San Luis Division	Dos Amigos Pumping Plant		
	Rewinding Stators, Units 1 and 2	Jul. 1986	Oct. 1986
Tehachapi Division	Wear Rings, Units 2, 4, and 6	Dec. 1986	Feb. 1987
	Edmonston Pumping Plant		
	Labyrinth and Shaft Seals	Dec. 1986	Feb. 1987
West Branch	Rewinding Stator, Unit 4	Dec. 1986	Feb. 1987
	Castaic O&M Center		
	Roof Restoration	Feb. 1986	Nov. 1986
	Seal Coating Roads and Parking Areas	Mar. 1986	May 1986
	Vista Del Lago Visitor Center	Apr. 1987	Jan. 1988
Mojave Division	Disposition of Gorman Creek		
	Interim Facilities	Jan. 1987	Sep. 1987
	Pearblossom Pumping Plant		
	Spare Stator Coils	May 1986	Mar. 1987
	Canal		
	Pearblossom Pumping Plant to		
	Southern Pacific Railroad Bridge	Mar. 1986	Jul. 1986
	Southern Pacific Railroad to Mojave Siphon	Jul. 1986	Dec. 1986
	Siphons		
	Three Rectangular Siphons	Mar. 1986	Nov. 1986
	Big Rock Siphon	Jul. 1986	Apr. 1987
	Nine Circular Siphons	Jun. 1986	Aug. 1987
	Pearblossom Pumping Plant		
	Pumps No. 7, 8, and 9	Aug. 1984	Dec. 1986
	Motors	Dec. 1986	Sep. 1987
Santa Ana Division	Valves	Apr. 1987	Jan. 1988
	Initial Contract	Apr. 1986	Jan. 1988
	Switchboards	Oct. 1986	Jan. 1988
	Switchgear	Oct. 1986	Jan. 1988
	Control System	Oct. 1986	Jun. 1989
	Transformers	Jun. 1987	Aug. 1988
	Field Office and Materials Laboratory	Sep. 1986	Jan. 1987
	Office Trailer Shade Shelter	Sep. 1986	Oct. 1986
	Mojave Siphon Powerplant		
	Preliminary Design	Jul. 1986	Jun. 1987
	Devil Canyon Powerplant		
	Warehouse	Dec. 1985	Jan. 1987
	Initial Contract	Mar. 1986	Oct. 1987
	Turbines, Governors, and Valves	Mar. 1986	Mar. 1987
	Bypass Equipment	Apr. 1986	Feb. 1987
	Penstock	Apr. 1986	Dec. 1987
	Switchboards	Mar. 1987	Nov. 1988
	Switchgear	Feb. 1987	Oct. 1988
	Generator	Mar. 1987	May 1988

a) Schedule being established.

b) Design activity on hold pending future decision.

Design on the remaining control and communication systems required for inclusion in the SWP Supervisory Control and Data Acquisition System is scheduled for completion in fall 1987. A manually operated interim control and communication system should be available in fall 1987. The complete system, providing total integration with the Project Operation and Control Center and Delta Area Control Center, is planned to be available in October 1988.

East Branch Enlargement (Mojave and Santa Ana Divisions)

Enlargement of the East Branch of the California Aqueduct will accommodate an additional flow of 1,500 to 1,683 cfs in the various affected reaches. The majority of enlargement work will be completed

during first-stage construction, which will provide at least half of the ultimate enlargement capacity. Over 50 contracts are required to complete first-stage construction. The second stage of the East Branch enlargement will be constructed when needed to meet water delivery schedules or when requested by MWDSC (whichever is earlier).

Raising the canal lining required five contracts. Design of the fifth and last contract was completed in December 1986. Fifteen canal siphons require additional barrels; in 1987, DWR awarded the first contract bids for additional barrels at three of the 15 siphons. Design is essentially complete for the additions at 10 other siphons.

Design is also under way to expand Pearblossom Pumping Plant to house five additional pumping units. Three units, each with a design capacity of 375 cfs, will be installed during the first stage of enlargement. Two of the new units will be considered as enlargement facilities (raising total plant capacity to 2,200 cfs) and the third will serve as a spare unit to enhance the plant's capability to deliver scheduled flows. Design work for the pump contract was completed in December 1986 and bids were received in March 1987. Design is in progress for most of the other contracts required to complete the plant expansion and install the three new pumping units.

Preliminary design is continuing to determine the size, shape, and setting of the new Mojave Siphon Powerplant. Final design is expected to begin in 1987.

Devil Canyon Powerplant will be expanded to accommodate two additional generating units. The decision to install both additional units during first stage construction was based upon an operational and economic study. The two 800-cfs impulse turbines, together with the two existing 600-cfs impulse turbines, will increase the plant's flow capacity to 2,800 cfs. A second penstock will be built to deliver water to the new units; however, the existing afterbay will not be enlarged. (DWR is studying the possibility of adding a second afterbay, but it is not yet an element of the present enlargement program.)

**Welding a section of
Thermalito Diversion Dam Powerplant**

In early 1987, design was completed on contracts for Devil Canyon Powerplant, turbines, governors, and valves. Design is progressing on schedule for the remaining contracts.

Under MWDSC Amendment No. 21 (see Chapter III), a sleeve valve and a bypass pipeline will be added to ensure minimum deliveries in the event of an emergency. The bypass facilities are not considered a part of the East Branch Enlargement.

Land and Right of Way

In 1986, DWR spent \$600,000 for land acquisition in excess of credits for sales of surplus property and return of condemnation deposits. The total net expenditure for SWP right of way through December 1986 was \$118.5 million. Twenty-two parcels (465 acres) were acquired during the year. The cumulative total of excess lands sold through 1986 was 853 parcels (13,649 acres).

Thirty-six new and existing leases were monitored through December 1986; annual revenues totaled \$67,500.

Transfer of 2,309 acres from DWR to the Department of Fish and Game (DFG) was completed in 1986. The land transfer, in the Santa Ana Division, was based upon a mitigation agreement between DWR, DFG, and MWDSC. Another 691 acres will be transferred. DWR concluded an agreement with DFG and the 46th District Agricultural Association to complete the transfer to DFG of 600 acres near Perris Dam.

DWR's 1986-87 program included the following land and right of way actions:

Energy Supply

- o At Bottle Rock Powerplant, one parcel along Bottle Rock Road was acquired and six parcels remain to be acquired. One parcel remains to be acquired on High Valley Road.
- o Mitigation land acquisition was completed for South Geysers Powerplant. Land transfer to DFG will be completed within six months. Transmission

line acquisition negotiations are suspended pending resolution of the steam supply.

- o The Rorabaugh Steamfield Leasehold (369 acres) and Bruno property (52.9 acres) were acquired for South Geysers Powerplant.

North Bay Aqueduct

- o A total of 70 parcels must be acquired for Phase II of the North Bay Aqueduct. Eighteen parcels were acquired in 1986-87, and 16 acquisitions remain to be completed. Negotiations are in progress to acquire the remaining necessary right of way, right of entry permits, or court ordered possessions to meet existing construction schedules.

South Bay Aqueduct

- o Two parcels are being acquired to accommodate additional operation and maintenance activities related to slides.

Suisun Marsh Facilities

- o DWR obtained one parcel and a right of entry allowing construction to proceed. Revision of the control structure plans necessitates acquiring one additional parcel.

North San Joaquin Division

- o DWR acquired one parcel for permanent drainage required by the Division of Operations and Maintenance. Appeal of the verdict in the State vs. Andreson trial is ongoing. (See "Litigation," Chapter III.)

South San Joaquin Division

- o Nine parcels are being acquired for the California Aqueduct silt removal program.

West Branch

- o Two parcels are being acquired for flood control improvement at Gorman Creek. Eminent domain action has been filed on these two parcels.

Construction Activity

Table 13 lists the major SWP construction contracts under way between July 1986 and June 1987. High-

lights of construction activities during the report period include work on the following facilities.

Energy Supply

- o Bottle Rock Powerplant cannot be operated at its designed maximum capacity of 55 MW because the steam supplier is unable to provide the full amount of required steam. The unit was taken out of operation between November and December 1986 to perform necessary work under Completion Contract No. 2. All contract work was completed by April 1987, with the exception of the cooling tower which did not meet design operational criteria. A contract was let to furnish an after-condenser unit to be installed during the next plant outage.
- o A combination of factors has postponed indefinitely the completion of the South Geysers Powerplant. The lack of a proven steam supply and depressed energy prices make South Geysers Powerplant an uneconomical energy source at this time.
- o In March 1986, however, construction of the turbine-generator building at South Geysers was essentially completed. Manufacturing and fabrication of the turbine-generator and associated electrical and mechanical equipment were also completed in 1986. The equipment is currently stored in and around the plant structure, pending a decision to resume construction of the power plant.

Oroville Division

- o Construction of the Thermalito Diversion Dam Powerplant structure was completed in January 1986. Installation of the turbine-generator and associated equipment was started in early 1986 and should be completed in July 1987. The unit began running operational testing and limited commercial energy production in July 1987.
- o Other construction contracts include Thermalito Afterbay Dam temporary wellpoint system, pressure relief system, and corner reinforcement. All these contracts were completed by March 1987.

Suisun Marsh

- o The contract for the construction of the Suisun Marsh Salinity Control Gates was awarded in May 1986. As required by the contract, the access road, dikes, and driving of sheet piling were completed by mid-October 1986.
- o The contractor set up his casting yard at the Stockton Ship Basin to construct the radial gate, the flashboard, and the boat lock structures. The three reinforced concrete structures were constructed on barges and floated to Rio Vista, where the gates were installed. They will then be towed to the site in Montezuma Slough and installed in fall 1987.

North Bay Aqueduct, Phase II

- o Construction of North Bay Aqueduct, Phase II, has been under way since fall 1984. Construction of the 23 miles of pipeline was divided into six construction reaches. Five of the six reaches are completed. The remaining reach, No. 5, is under construction and is scheduled for completion in October 1987. Cordelia and Barker Slough pumping plants construction was started in 1986. Manufacture of the pumping units was started in late 1985; pumps and auxiliary equipment should be in operation by October 1987.

Tehachapi Division

- o Three new pumping units, Nos. 10, 12, and 14, have been operating at A. D. Edmonston Pumping Plant since December 1984. Final operational testing and all work on the three units was completed in June 1986. Unit No. 4 motor was repaired during the year and was back in service in early 1987.

Mojave Division

- o All Alamo Powerplant work was completed in early 1987 with the exception of Unit No. 1 final efficiency testing. This testing was delayed because of operational problems. The unit has been in limited commercial operation since July 1, 1986.

TABLE 13. SWP CONSTRUCTION ACTIVITIES

Division or Facility	Activity (Specification Number)	Start Date	Planned Completion Date(a)	Contract Costs(b) (\$1,000)
Energy Supply	Bottle Rock Powerplant			
	Turbine/Generator (80-27)	Nov. 1980	Mar. 1987	8,108
	Powerplant Construction (81-41)	Feb. 1982	Apr. 1987	40,000
	Transformers for Bottle Rock and South Geysers Power Plants (82-22)			
	Cooling Tower (82-33)	Oct. 1982	Jun. 1987	1,335
	Stretford System (82-36)	Nov. 1982	Jul. 1987	3,215
	Completion Contract No. 2 (86-08)	Nov. 1982	Mar. 1987	3,566
	After-Condenser Replacement (86-25)	May 1986	Apr. 1987	1,260
		Sep. 1986	Apr. 1987	466
	South Geysers Powerplant			
	Turbine Generator (82-48)	Jan. 1983	(c)	7,950
	Powerplant Construction (82-54)	Jan. 1983	Mar. 1987	17,100
	230-kV Line Breaker (83-12)	Jul. 1983	(c)	189
	Condenser and Gas Removal System (83-13)	Aug. 1983	(c)	4,440
	Plant Auxiliary Control System (83-15)	Aug. 1983	(c)	488
	Control Switchboards (83-21)	Aug. 1983	(c)	335
	Stretford System (83-28)	Sep. 1983	(c)	3,850
	Cooling Tower (83-31)	Oct. 1983	(c)	3,952
	Switchgear Motor Control (84-05)	Apr. 1984	(c)	640
	Cooling Water and Condensate Pumps (84-01)	Apr. 1984	(c)	524
Oroville Division	Edward Hyatt Powerplant and O&M Center			
	Restroom Modifications (86-21)	Sep. 1986	Apr. 1987	112
	Furnishing Generator Armature Winding Coils (85-01)	Mar. 1985	Oct. 1986	233
	Oro Blvd.-Hyatt Powerplant Rd. Modification (86-17)	Jul. 1986	Sep. 1986	82
	Thermalito Afterbay Dam			
	Modification (Corner Reinforcement) (86-30)	Aug. 1986	Oct. 1986	271
	Pressure Relief System (86-04)	Apr. 1986	Mar. 1987	693
	Thermalito Diversion Dam			
	Powerplant Turbine, Generator and Governor (84-19)	Aug. 1984	Jul. 1987	1,711
	Powerplant Structure (84-44)	Dec. 1984	Jul. 1987	3,800
	Control Switchboard, Switchgear and Station Transformer (85-14)	Aug. 1985	Jul. 1987	375
	Power Distribution System (86-01)	Mar. 1986	Jul. 1987	548
	Acoustic Flowmeter (86-05)	May 1986	Jul. 1987	124

- a) Date work is operationally complete. Testing and contract documentation may continue after this date.
b) Costs represent actual costs of completed work or estimated final costs of construction in progress.
c) Installation deferred pending acquisition of an adequate steam supply.

- o Modification of the Mojave Aqueduct from Cottonwood Chutes (Alamo Powerplant) to Pearblossom Pumping Plant was started in July 1985 and completed in April 1987. The work involved raising the aqueduct lining by about 4 feet vertically over three reaches each approximately 18 miles long. A majority of these modification costs were allocated as part of the cost of enlarging the East Branch.
- o East Branch enlargement construction began in 1986. Work includes enlarging the canal from Pearblossom Pumping Plant to Mojave Siphon (two reaches aggregating about 40 miles), adding more siphon barrels at various locations along the aqueduct, installing additional pumping units at Pearblossom Pumping Plant, and installing additional turbine-generator units at Devil Canyon Powerplant.
- o The contract for the first aqueduct reach, Pearblossom Pumping Plant to Southern Pacific Railroad Bridge (SPRB), was awarded in November 1986 and is planned for November 1987 completion. The contract for the second aqueduct reach, from SPRB to Mojave Siphon, was awarded in April 1987 and is planned to be completed in June 1988. Three siphon contracts were awarded in 1987. Contracts for the additional pumps, motors, and turbines for Pearblossom Pumping Plant and Devil Canyon Powerplant were awarded in spring 1987. All work on first-stage enlargement of the East Branch is planned for 1992 completion.

Safety of SWP Facilities

DWR initiated a revised safety review program of SWP dams in 1975. This review program is required by Water Code Section 6056. Under this program, consulting boards conduct independent safety reviews of each dam every five years. DWR participates in the safety review process by providing technical engineering support to the various consulting boards. The first safety evaluation under this review program has been conducted and DWR is now implementing the boards' recommendations. Following is

a summary of activities in progress under this program.

- o A new Safety Review Board will be convened in fall 1987 to review Perris Dam and Cedar Springs Dam.
- o DWR continues the Safety Review Board's recommended monitoring of the concrete slab movement in the Castaic Dam Spillway.
- o The permanent pressure relief system, corner reinforcement, and additional fill were completed at Thermalito Afterbay Dam. The pressure relief system is being monitored to ensure meeting the design criteria.
- o The Safety Review Board recommended dewatering of Patterson Reservoir on the South Bay Aqueduct every five years for inspection of the asphalt lining. During the November 1986 inspection, two asphalt lining areas were repaired to reduce seepage possibilities and silt was removed from the invert.
- o The Safety Review Board's recommended additional dynamic soil studies and seismic stability analyses for Del Valle Dam are being reexamined.

To meet the Federal Energy Regulatory Commission's (FERC) five-year safety review requirements, an independent consultant will be retained in late 1987 to inspect W. E. Warne Powerplant and related facilities; when completed, the consultant's final report will be submitted to FERC.

Hydrology studies for Los Banos Creek and Little Panoche Creek Detention dams indicate the dams could be overtopped under extreme flood conditions. Studies for both dams to determine the most cost effective methods to resolve this problem are continuing and should be finished in 1987.

A Federal Safety Evaluation of Existing Dams investigation is in progress of O'Neill Forebay Dam. This investigation is to resolve the problem of possible foundation liquefaction of the dam during earthquakes. Consultants will review possible corrective actions and make recommendations.

Monitoring San Luis Dam's crest cracks continues. No lengthening of old cracks was observed since 1985, and openings have remained the same. One additional parallel hairline crack, about 50 feet long, has been observed one foot to the east of the old crack. Two minor cracks, each about 10 feet long, have also been observed.

Review of Public Safety at SWP Facilities

In 1986, a consulting contract was awarded to DDS and Delta Vision to evaluate the existing public safety programs used at SWP facilities. The consultants will recommend additional actions to reduce SWP public liability. The necessity of reducing SWP public liability became evident with the recent settlement of two lawsuits for a total of \$4.5 million. One lawsuit in-

volved the drowning of a person fishing the California Aqueduct, the other was related to serious bodily injuries resulting from an accident on the bikeway.

The contract provides for a review of public safety at all SWP facilities; however, special emphasis will be given to the California Aqueduct and the walk-in fishing, hiking, sightseeing, and bikeway programs. The consultants completed field data collection during 1986 and furnished a draft report of their findings and recommendations in February 1987. The report was completed in July 1987. This report will provide guidance in upgrading the SWP public safety programs, which in turn should reduce both the occurrence of accidents and the public liability aspect of these mishaps.

CHAPTER V

SWP WATER SUPPLY, PRESENT AND FUTURE

This chapter examines future SWP water delivery plans, compares presently developed water supplies to anticipated demands, and assesses potential means for augmenting water supply capabilities to meet future needs.

Future Water Delivery Plans

DWR annually requests each long-term SWP contractor to prepare an estimate of near- and long-term SWP water requirements. These projections form the basis for DWR water planning and project operation studies in the upcoming year.

DWR sent a letter to each long-term SWP contractor in August 1986, requesting estimates of (1) monthly SWP water requirements during 1987 through 1991, and (2) annual requirements for 1995 and every fifth year beyond until the year in which maximum entitlements would be used on a regular basis.

In September 1986, SWP contractors submitted their estimated monthly SWP water delivery requirements for the five-year period 1987 through 1991.

Entitlement Water

Table 14 shows the estimated 1987 through 1991 entitlement water needs submitted in 1986. The table also shows estimates submitted in the six previous years. The long-range contractor projections for entitlement water are in Table B-5B (in Appendix B).

Initial entitlement water requests for 1987 totaled 2,765,000 acre-feet. Because of below average precipitation in late 1986, DWR imposed deficiencies on 1987 agricultural entitlement deliveries. On December 1, 1986, pursuant to the 1987 Rule Curve, approved entitlement water totaled only 2,255,000 acre-feet. Scheduled agricultural deficiencies totaled 462,215 acre-feet. On January 12, 1987, MWDSC reduced its entitlement water request by

184,500 acre-feet; DWR diminished the contractors' scheduled agricultural deficiencies accordingly, to 277,715 acre-feet. MWDSC reduced its entitlement water request by an additional 195,000 acre-feet after signing a power sale agreement, on February 24, 1987 (see "Power Sale to MWDSC," Chapter III). This reduced the total scheduled agricultural deficiencies to 82,715 acre-feet.

After several March 1987 storms, DWR reanalyzed the SWP's 1987 delivery capability and concluded that conditions no longer required imposing agricultural entitlement water deficiencies. At the end of March, DWR removed deficiencies and gave the contractors the option of revising their entitlement water requests. Revised entitlement requests for 1987 totaled 2,312,772 acre-feet.

Miscellaneous Water

Some other types of water besides entitlement water are scheduled for 1987 delivery. Anticipated water deliveries include 6,953 acre-feet of recreation water and 4,360 acre-feet of non-Project water, pumped through interim facilities, to Napa County Flood Control and Water Conservation District. Other water slated for 1987 delivery includes 7,547 acre-feet of advance storage program water delivered during January and February 1987 and 114,935 acre-feet of unscheduled water delivered through April 30, 1987.

SWP Water Delivery Capability

The measure of delivery capability for the SWP was founded on the concept of "firm yield" operation. This concept is embodied in the water supply contracts under the term "minimum project yield," defined as the dependable annual water supply that can be made available without exceeding specified allowable reductions in agricultural deliveries during an extended dry period.

**TABLE 14. WATER CONTRACTOR'S REQUESTS
FOR ENTITLEMENT WATER, 1987 THROUGH 1990**

Year Estimate Submitted	Annual Delivery Requests (Acre-Feet)(a)					
	1986	1987	1988	1989	1990	1991
1986		2,765,040	2,825,543	2,880,172	2,935,137	2,972,543
1985	2,367,781	2,655,526	2,739,093	2,789,545	2,849,832	
1984	2,200,438	2,625,184	2,828,253	2,877,215	2,934,450	
1983	2,682,948	2,780,832	2,852,989	2,906,699		
1982	2,711,107	2,800,235	2,888,377			
1981	2,788,111	2,901,175				
1980	2,709,710					
Total Entitle- ments(b)	3,296,709	3,500,435	3,694,269	3,958,190	4,108,321	4,157,156

- a) Includes deferred entitlement. For 1986 and 1987, amounts include non-SWP water pumped through interim facilities to Napa County Flood Control and Water Conservation District.
- b) Maximum amounts that could be requested under the water supply contracts (derived from Table B-4 by adding non-SWP water for Napa County Flood Control and Water Conservation District in 1986 and 1987).

The current firm yield of existing SWP facilities is approximately 2.4 million acre-feet per year. As shown in Table 14, contractor requests for delivery of entitlement water exceed the firm yield of existing facilities beginning in 1987. Since timely augmentation of SWP yield through new construction has been precluded, DWR has been devoting increasing attention to the potential for increasing the average annual delivery capability of existing facilities by using operating strategies other than those used for the conventional firm yield mode of operation.

Short-range decisions for the operation of SWP facilities are made with an annual "rule curve." The rule curve provides a rational means to decide how much water may be delivered in a given year and how much should be left in storage as insurance to protect against subsequent dry periods. Until recently,

the procedure used to develop the annual rule curve was designed to assure a high probability of meeting future delivery schedules. This resulted in relatively high fall storage target levels for Lake Oroville and the State portion of San Luis Reservoir, and quite often delayed approval of water delivery requests until late in the water-producing season. Furthermore, the former procedure did not cover how such storage reserves would ever be used, since the rule curve was based on a running short-term (2-year) analysis period.

As the contractors' annual requests for entitlement water continued to rise, DWR became increasingly aware that alternative rule curve procedures could permit larger deliveries in average or wet years without substantially reducing delivery capability during dry years. With the concurrence of the SWP contrac-

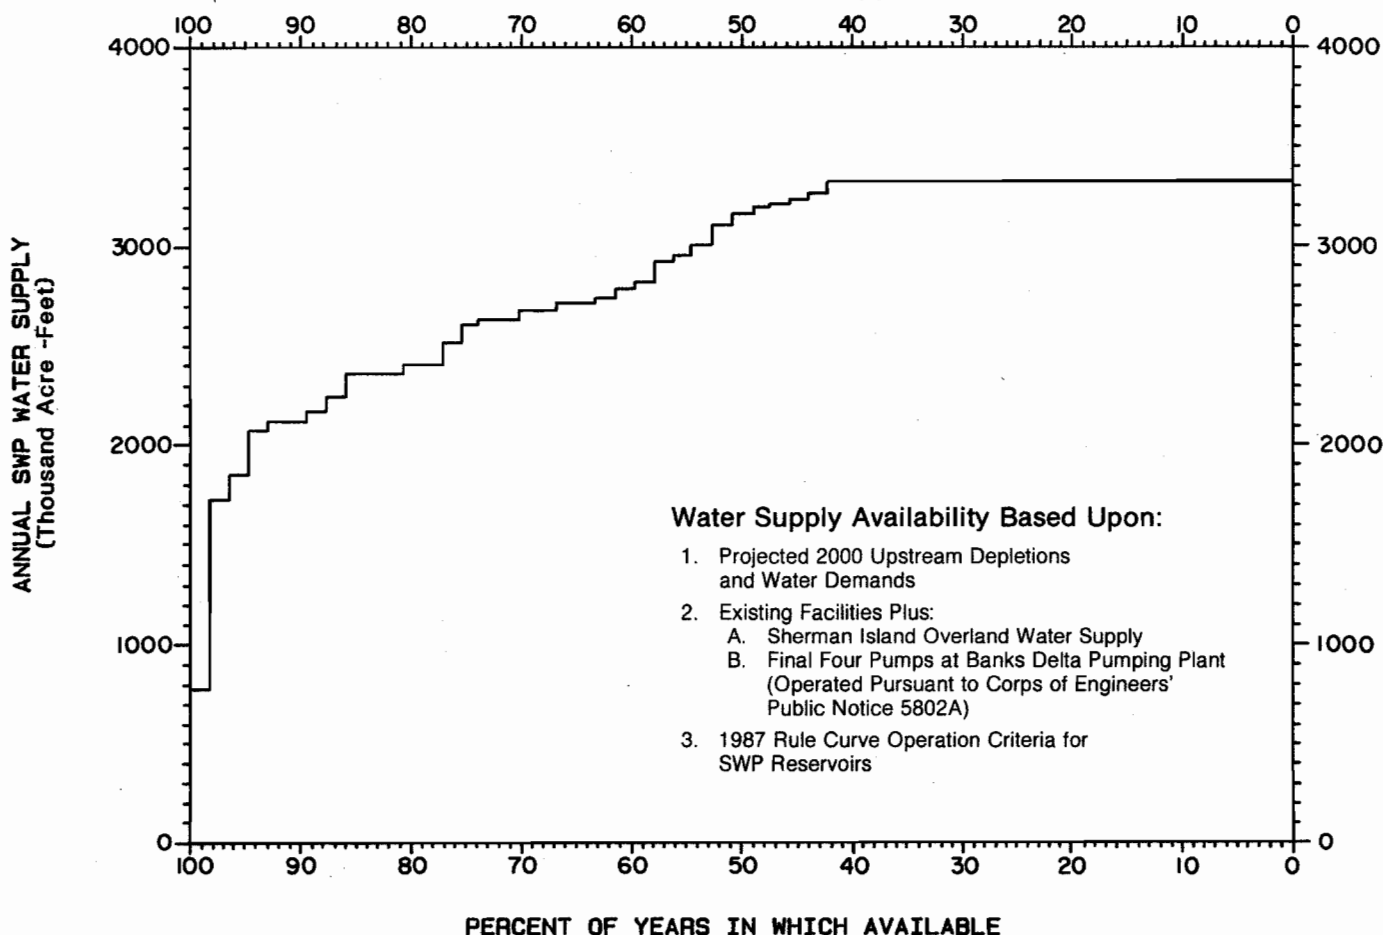

tors, one such alternative rule curve procedure was adopted, on a trial basis, for use in 1986. The 1986 rule curve procedure relaxed the requirements for fall carry-over storage somewhat, permitting larger deliveries in most types of years, but at the possible expense of reduced deliveries in the driest years. The modified rule curve permits approval of a reasonable annual delivery early in the water-producing season without jeopardizing the average dry-period supply that would be available during a recurrence of the historic 1928-34 drought period.

For 1987, the contractors approved a modification of the 1986 rule curve to lower the fall reservoir carry-over requirements in the earlier years of an extended dry period. Figure 9 shows projected SWP water supply in the year 2000 under the 1987 rule curve

operating criteria. The 1987 criteria result in significant increases in water supply availability in many years (compared to the 1986 criteria, see Figure 9 on page 86 of Bulletin 132-86). These increases occur in the range of about 40 to 90 percent availability. In extremely dry years, the 1987 criteria lead to somewhat more severe deficiencies than the 1986 criteria (because reservoir storage would have been drawn down to increase deliveries in the preceding years). However, average dry period deliveries during a repetition of the 1928-34 drought would be about the same with either of the operational criteria used in Figure 9.

DWR is continuing its studies of alternative operating strategies and its dialogue with SWP contractors on these studies. The contractors will continue to be

**FIGURE 9. SWP WATER SUPPLY AVAILABILITY
(March-February)**

given the opportunity to make informed choices on future operating criteria and facility development.

Alternatives for Delta Water Transfer

DWR continues to study various solutions to Delta problems that result from the inefficient water transfer capability of the Delta. DWR planning efforts are directed toward developing information to solve the following problems related to SWP operations:

- o degradation of water quality at the Contra Costa Canal intake and at the Tracy and Banks Delta pumping plants caused by salinity carried into the Delta from flow reversals in the San Joaquin River;
- o depletion of upstream reservoir storage because of larger releases necessary to compensate for current inefficient water transfer in the Delta;
- o lowered water levels in Delta channels near the export pumps;
- o potential scouring of channels and erosion of levees in the southern and central Delta;
- o disruption of Delta fish and wildlife habitat and interference with fish migration; and
- o limited conveyance capacity in the southern Delta channels.

Studies seeking solutions to these Delta problems will review, but not duplicate, previous efforts.

South Delta Water Management Planning

In October 1986, DWR, the USBR, and South Delta Water Agency (SDWA) signed the South Delta Agreement, outlining water supply and water quality program plans for the south Delta (see "South Delta Activities," Chapter III).

As part of this agreement, DWR and the USBR conducted public meetings to discuss south Delta management alternatives. Information gathered at these meetings will be used to identify significant issues and to begin environmental documentation.

South Delta Agreement objectives are to improve and maintain water levels, circulation patterns, and water quality in the south Delta. Evaluation of alternatives to meet these objectives will include broader USBR and DWR Delta region objectives. These broader objectives concern (1) fisheries, (2) SWP and CVP operations, (3) water supply reliability through improved winter supply banking capabilities, and (4) flood control.

Alternatives considered for the south Delta include: (1) dredging and channel improvements, (2) flow control structures, (3) relocation of Contra Costa Canal intake, (4) changes at Clifton Court, including new intake gate, and (5) a CVP interconnection to Clifton Court. Effects will also be examined of increased flows to fill south-of-the-Delta water banking and other storage programs.

In addition, DWR is considering a conjunctive use program for New Melones water. Such a program would allow the SWP to take water during dry years while at the same time improving south Delta water quality. New Melones releases would also add to the water quality of the San Joaquin River, a tributary to the south Delta.

North Delta Water Management Planning

DWR is also using the environmental documentation process to evaluate north Delta water management alternatives to improve the present through-Delta transfer method and to reduce or eliminate reverse flows. Anticipated benefits would include providing flood protection on the lower Mokelumne River, improving drinking water quality, reducing fisheries impacts, and better managing the upstream fresh water storage of federal and State projects.

A phased investigation, starting with enlargement of the south fork Mokelumne River is one possibility. This would provide major flood control benefits for the area, which includes the five north Delta islands and tracts that flooded in 1986. Dredging alone reduces the flood stage by an estimated 5 to 10 percent, while dredging with levee setbacks are estimated to reduce the flood stage by over 10 percent.

South fork Mokelumne River enlargement may also significantly reduce reverse flows. Reverse flow defines a condition that occurs in the lower San Joaquin River because of flow limitations in the existing northern through-Delta transfer channel system. This system includes the Delta Cross Channel, Georgiana Slough, and the lower Mokelumne River, which are not capable of conveying enough water from the Sacramento River to maintain good quality to Delta and export users. As a result, some water must follow an undesirable, poor quality path around Sherman Island in the western Delta, then back up the lower San Joaquin River to the pumps.

The reverse flows create an environment harmful to migrating fish, young striped bass, and fish food organisms. The reverse flow increases fish impacts at the SWP pumping plants by an estimated 25 percent. Reverse flows also bring brackish water from the western Delta eastward into the San Joaquin River channel, degrading water quality at the Contra Costa Canal intake, and, to a lesser extent, at Clifton Court Forebay. Reverse flow conditions increase total dissolved solids, chlorides, and hardness of the export supplies by an estimated 20 to 40 percent, as well as an increase in bromides of sea water origin which contribute to the levels of trihalomethanes (THM). Treated drinking water meets all THM standards; however, THMs are suspected cancer causing chemicals formed during the water treatment process and the presence of bromides accelerates this formation. Reverse flow conditions are estimated to increase THM formation substances proportional to chloride increases.

A way to reduce or eliminate reverse flow is to improve the transfer system by increasing channel capacity. By conveying more water through the desirable good quality path from the Sacramento River to the Mokelumne River, less water has to flow around the western edge of Sherman Island and "upstream" in the lower San Joaquin River. This action would reduce the adverse impact of reverse flows on both fish and consumer water quality, while increasing the reliability of existing reservoirs.

West Delta Water Management Planning

DWR and the North Delta Water Agency (NDWA) signed a contract in 1981 for water supply and quality protection in the NDWA. The contract provided for a future overland water supply facility for Sherman Island. This facility and alternatives are under investigation.

One alternative is a wildlife management plan for Sherman Island. The feasibility of this alternative is being studied through a contract with the Department of Fish and Game. Study items include acquisition of waterfowl easements, marsh management requirements, needed improvements (including levee maintenance), expected costs and revenues, funding sources, and benefit costs to waterfowl populations.

The wildlife management plan, in coordination with other Delta planning, has the potential of developing a number of significant benefits: (1) flood control by levee improvements and land management to stop subsidence, (2) recreation, (3) better management of water supplies, and (4) fish and wildlife enhancement. A draft report should be completed in late 1987.

Interagency Delta Management Committee

DWR, the USBR, and the Corps of Engineers signed a Letter of Understanding in 1986 to form an Interagency Delta Management Committee. The letter confirmed the intent of the three organizations to coordinate technical studies in the Sacramento-San Joaquin Delta. The complex activities, interlocking problems, and limited resources in the Delta require a high degree of coordination. This planning will be to improve western Delta levees and to protect against levee failure which increases salinity intrusion.

Three subcommittees have been established to review alternative approaches, modeling, and geotechnical activity. The alternative approach subcommittee is investigating alternative long-term plans for Delta levee restoration and other Delta water-related problems.

The modeling subcommittee is refining computer programs that simulate salinity changes and other hydrology in the Delta.

In the geotechnical subcommittee, the Corps of Engineers has completed a report that identifies the potential for instability of the Delta levees due to liquefaction of the sand layers beneath the levees. The report provides information on 60 islands. In addition, DWR has installed a compaction recorder on Bacon Island to measure deep, as well as shallow, subsidence. Contra Costa County has been involved with the compaction recorder project.

DWR is also preparing a Delta-wide levee inspection program and is evaluating highway benefits provided by levee protection. Both of these programs are mandated by the Legislature.

Potential Means to Augment Water Supply

California's water picture is characterized by continual change. Water needs fluctuate, droughts or heavy rainfall affect water supplies, and theories and practices of water resource management change periodically. Even the California Water Plan, published in 1957 and adopted by the Legislature in 1959, was never intended to be a rigid, inflexible blueprint for water resource development.

The recent trend is to place less emphasis upon conventional onstream storage projects north of the Delta, and to place more emphasis upon water conservation, water quality, water salvage, ground water conjunctive use projects, and offstream storage south of the Delta. Additional nonstructural measures such as water marketing, water exchanges, and crop substitution (including nonplanting) are in the proposal and evaluation stages. This change in emphasis is brought about by the interaction between such factors as increased construction and financing costs, a depressed farm economy, cutbacks in federal spending, and changing public attitudes about water management. All of these factors and changes affect planning and should be reflected, to the extent possible, when outlining and summarizing probable future scenarios.

The outlook in 1987, with respect to specific facilities, is quite different from what it was 10 or 20 years ago. For instance, the Auburn Dam, in spite of broad-based support, still lacks sufficient financial backing. Local projects also face an uncertain future.

Nevertheless, California still has a number of unresolved water problems: upstream development will decrease water supplies in the Delta; Colorado River water supplies, used in Project service areas, will soon be diverted to Arizona; and, despite extensive conservation efforts, total urban water use in Project service areas will increase. The quest for the most effective solutions, and the necessary consensus to implement them, continues; the basic problems will not change, but the solutions may.

Some of these solutions may be interim or short term. Such interim solutions could enable meeting near-term contractual obligations while postponing some of the relatively more expensive structural solutions that will be needed eventually. Water marketing agreements, SWP entitlement transfers, CVP purchases, and increased agricultural and urban water conservation programs are examples of interim solutions receiving increased attention.

The status of various projects, facilities, and programs under consideration, both short- and long-term, is discussed in more detail on the following pages.

Oroville Reservoir Runoff Enhancement

The Feather River basin is the major source of SWP water. Faced with increasing demands for water by the SWP contractors, DWR considered the possibility of conducting cloud-seeding in the Feather River watershed to increase the water amount available from Lake Oroville. For almost 40 years, cloud-seeding has been used by other agencies to augment streamflow from various rivers on the western side of the Sierra Nevada, but it has not been used in the Middle Fork Feather River area.

In 1985, a contract was awarded to North American Weather Consultants to conduct a feasibility study of cloud-seeding in the Feather River watershed. Results of this study were sufficiently optimistic to justify

funding the preparation of an operational plan and environmental documentation.

The operational plan will be developed under cost-sharing agreement with the USBR. Emphasis will be placed on augmenting streamflow by increasing the snowpack. The USBR has been engaged in a research program on cloud-seeding water orographic clouds since 1975. The environmental documentation will be done by DWR.

Completion of this phase of the program in July 1988 will result in an operational plan to guide cloud-seeding in the Feather River watershed. The operational plan will specify the types of clouds to be seeded, seeding agents to be used and their rates of application, locations for ground-based generators, aircraft-seeding tracts (if applicable), suspension criteria and a proposed method of evaluation.

Implementation of the program will start with the purchase and installation of the cloud-seeding and monitoring equipment and the selection of a firm to operate the cloud-seeding program.

Banks Delta Pumping Plant, Additional Units

The most advanced program for water supply augmentation is the installation of additional pumping units at the Banks Delta Pumping Plant. The plant was built to accommodate 11 units, but only seven were initially installed. On December 30, 1986, DWR's Director signed a Notice of Determination and the installation schedule for the four additional units shifted from the planning phase to the design and construction phase. The new units, each with a design capacity of 1,067 cfs, are scheduled to begin operation in 1991.

Completion of the Banks Delta Pumping Plant will increase SWP delivery reliability and efficiency by increasing standby capacity for the already existing units and by permitting a larger share of the pumping to be done with off-peak power. The new units will also allow a small amount of additional pumping to be shifted to the winter months.

The last four units will increase the total capacity of the pumping plant to 10,300 cfs, bringing the Califor-

nia Aqueduct up to its full design capacity between the Banks Delta Pumping Plant and Bethany Reservoir. To protect the navigable capacity of the Delta waterways in the vicinity of the pumps, the Corps of Engineers limited diversions into the Clifton Court Forebay to historic levels (Public Notice 5802A, amended, October 1981). Increasing diversions into Clifton Court Forebay to greater than historic rates will require a Corps of Engineers' permit (under Section 10 of the River and Harbor Act of 1899).

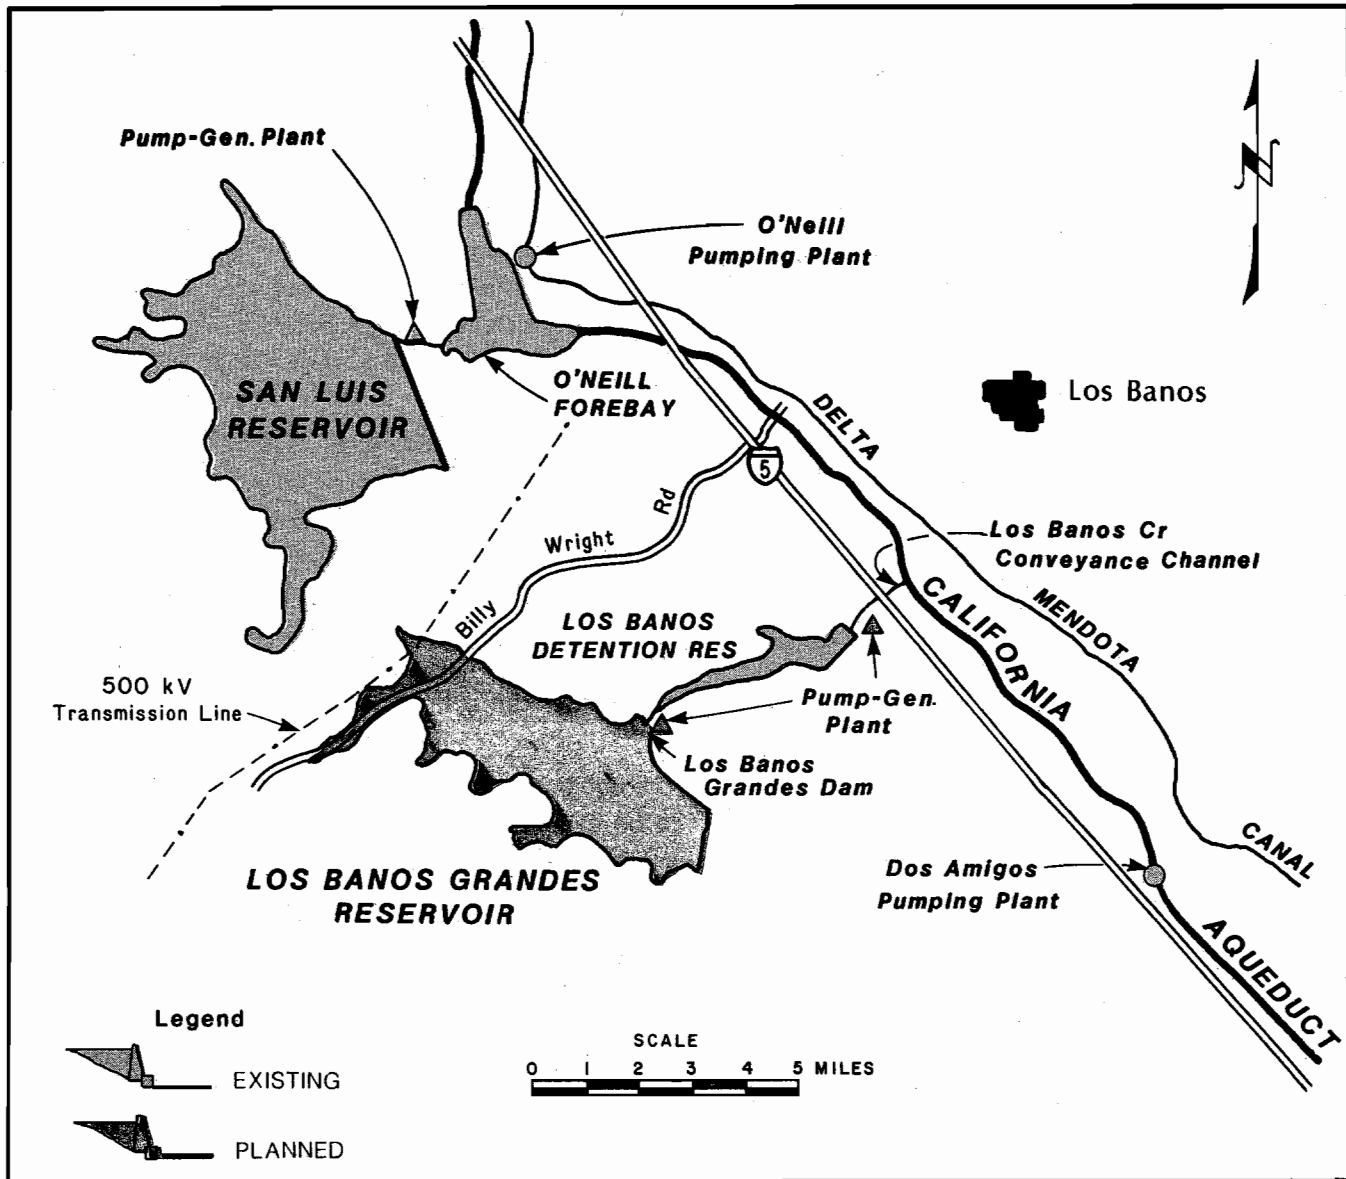

Installation of the additional units will also increase the reliability of SWP water supply deliveries. Under the Corps of Engineers' constraints, the additional pumps could increase firm deliveries during critical water supply periods by about 60,000 acre-feet annually. This water, pumped during high-flow winter months, will partially offset the frequency and severity of projected shortages.

The additional pumping units will allow more pumping to be shifted to off-peak hours, when energy costs are lower. This will provide cost savings to SWP water contractors, as well as possibly delay the need to buy additional power or to construct additional power generating facilities.

Before the Notice of Determination could be signed, environmental concerns regarding the additional units at Banks Delta Pumping Plant needed to be addressed. By shifting more pumping to the winter months, when fish populations are lower and surplus Delta inflow is higher, potential environmental damage would be reduced. Since the water conserved will be stored south of the Delta, in off-stream surface reservoirs or ground water basins, demands on the Delta will be reduced during the environmentally sensitive seasons when fish populations are high.

A fishery agreement between DWR and the Department of Fish and Game was signed on December 30, 1986. This agreement was necessary before work on the final four units could continue. The fishery agreement spells out the steps needed to offset adverse fishery impacts by SWP operations. (See "Two-Agency Fish Agreement," Chapter III.)

FIGURE 10. LOS BANOS GRANDES OFFSTREAM STORAGE PLAN

Offstream Storage South of the Delta

Nearly all interests agree that plans for future SWP water development should emphasize storage facilities south of the Delta. The storage facilities would be "offstream," meaning they would be built on a stream or streams that produce very little water and would be filled with excess runoff conveyed from the Delta. Stored water would be released when needed for use by agencies contracting for water from the SWP.

The broad consensus supporting this approach was apparent in 1984, when the Legislature overwhelmingly approved authorization of Los Banos Grandes Reservoir, about 80 miles south of the Delta in western Merced County, as a future SWP storage facility. A May 1984 reconnaissance appraisal of 13 south-of-the-Delta storage sites, entitled "Alternative Plans for Offstream Storage South of the Delta," launched a four-year DWR feasibility investigation of the Los Banos Grandes Reservoir. In presentations made at a July 1986 conference sponsored by the California Water Commission, this approach to future SWP water development still has broad, diversified support among several groups throughout the State.

The State is also participating in Los Vaqueros Reservoir planning discussions, and is cooperating with the USBR in its Kellogg Reformulation Study. DWR is a member of Contra Costa Water District's (CCWD) Los Vaqueros Task Force. The task force is studying CCWD's proposed development of Kellogg Creek. Such development would be well situated geographically to serve water to – and meet the special needs of – South Bay customers of the SWP and other Bay Area districts.

Los Banos Grandes Reservoir. As discussed earlier in this chapter, SWP contractors requests for entitlement water exceed what existing facilities can dependably supply. Without new facilities, by the year 2000, project operation studies show that water shortages of varying degrees are likely in three out of four years. Construction of the Los Banos Grandes offstream storage project would reduce the frequency and magnitude of these water shortages.

The proposed reservoir would store excess water pumped south from the Delta through the California Aqueduct during wet months, primarily November through March. This water would be repumped, from a point about 8-1/2 miles south of O'Neill Forebay, into the existing Los Banos Detention Reservoir and then into Los Banos Grandes for storage. Pumping-generating plants would be installed below the detention reservoir and Los Banos Grandes, thereby recovering power when stored water was released to meet SWP needs. Flood control space in the existing detention reservoir would be transferred to the Los Banos Grandes Reservoir. The detention reservoir could also serve as a forebay/afterbay to facilitate off-peak pumping and on-peak generation. This type of operation would take advantage of the value difference between on-peak and off-peak energy.

During 1986, DWR continued its feasibility studies of Los Banos Grandes which began in mid-1984. The studies include: foundation drilling, construction material surveys, and seismic studies; seepage and drainage studies; fish, wildlife, and plant surveys; preliminary design and cost estimates; extensive reservoir operation and water yield studies; pumping and generation analyses; and cost/yield comparisons.

DWR is exploring the possibility of cooperatively developing a pumped-storage power system at Los Banos Grandes with several electric utility companies. Joint water and power development should result in cost savings for both water and power users.

Los Banos Grandes sizing studies showed that a reservoir with about 1.0 to 1.5 million acre-feet of storage capacity would be the most cost effective size for the SWP. To reduce the number of alternatives and to allow sharper focus on a specific project for detailed feasibility analyses, DWR selected a 1.25 million acre-foot storage capacity, with the conveyance system sized for water supply operation. This size is being used as a benchmark against which other configuration options are measured.

During 1986 and early 1987, feasibility study highlights included:

- o Environmental Work. Early in 1986, DWR issued a Notice of Preparation of its intent to begin an EIR on Los Banos Grandes. DWR held a public scoping session in May at Santa Nella to ascertain from local agencies and the general public concerns and issues that needed to be addressed in the EIR. The State then began the informal consultation process with the Department of Fish and Game and the U. S. Fish and Wildlife Service regarding threatened and endangered species. Specific on-site impacts were emphasized during 1986; impacts on the Delta will be addressed.

In early 1987 it was evident that a federal EIS would also be required. Therefore, DWR will prepare a joint EIR/EIS in cooperation with the USBR, the Corps of Engineers, and other federal agencies.

- o Archeology. DWR contracted with the California State University, Fresno Bulldog Foundation to conduct an archeological survey of the reservoir area. In December 1986, a draft report identified 11 prehistoric cultural sites and two historic sites within project boundaries. Some of these may require sampling to determine their significance and subsequent mitigation measures.
- o Seepage and Drainage. Chapter 1656, enacted by the Legislature in 1984, (AB 3792) directs DWR, as part of its feasibility studies of Los Banos Grandes, to determine whether its construction would adversely affect drainage problems in nearby farm lands. DWR advertised a Request for Proposal in September 1986 for a consultant to investigate the seepage potential of Los Banos Grandes. Eleven proposals were received. After review, DWR awarded the consultant contract to Morrison-Knudsen Engineers of San Francisco. This study will form an important part of DWR's overall investigation of whether seepage from Los Banos Grandes might adversely affect shallow ground water conditions in the drainage problem areas of nearby farm lands.
- o Geology. DWR published a feasibility level geologic report about the Los Banos Grandes de-

velopment in December 1986. This report covers (1) regional structure and stratigraphy, (2) Los Banos Grandes dam site, (3) proposed pumping-generating plant sites, (4) proposed intake channels, (5) a Salt Creek auxiliary dam site, (6) saddle dam sites, (7) reservoir geology, (8) seismicity, and (9) construction materials. The report findings indicate that it is geologically feasible to construct embankment-type dams at the Los Banos Grandes and Salt Creek auxiliary dam sites.

It has been recommended that additional geologic and engineering studies be made to determine if the Los Banos Grandes site is suitable for a roller compacted concrete dam and whether any cost savings could be realized with this type construction. These studies are under way.

- o Pumped-Storage Power Planning. Eighteen potential electric utility participants were notified of the pumped-storage power potential at Los Banos Grandes; eight were interested in participating. Some utilities are investigating alternative projects, but it appears that the full generating potential at Los Banos Grandes could be realized if further studies demonstrate feasibility, and if appropriate institutional and funding arrangements are made.

Four alternative plans will be discussed in the feasibility report and EIR. One will be a SWP water supply plan, with appropriate power features integrated into the SWP power resource plan; the second will be a water supply/pumped storage power plan including utility participation. The other two plans would include the USBR participation with and without utility participation. This will give DWR the flexibility to choose the plan deemed most appropriate depending on circumstances of the time a decision to proceed is made.

The remaining portion of the Los Banos Grandes feasibility investigation will consist of:

- o continuing feasibility analysis of pumped storage power features, working toward a possible joint

venture with one or more electric utility companies;

- o investigating feasibility of the USBR participation in the Los Banos Grandes project;
- o determining the impact of operating with only some channel enlargement in the south Delta, instead of an entire improved Delta water-transfer system;
- o investigating conjunctive operation with Kern Water Bank ground water storage;
- o determining how to use operational flexibility to reduce pumping impacts on Delta fish;
- o defining costs more accurately, including the feasibility and cost-saving potential of a roller compacted concrete dam at the main dam site;
- o continuing all supporting studies (seepage-drainage, environmental, water quality, economic analysis, payment capacity, financial analysis, etc.);
- o preparing State and federal agreements and filing for permits and licenses that are needed for the project; and
- o completing the feasibility report and EIR.

The draft EIR is scheduled for completion in late 1988, and the final EIR should be finished by late 1989. With this schedule, Los Banos Grandes could be operational in 1997, if a decision to proceed with design and construction is made shortly after the EIR is completed.

Kellogg/Los Vaqueros Reservoirs. Although DWR's May 1984 report indicated that Los Banos Grandes Reservoir project would be more cost effective than the Kellogg/Los Vaqueros Reservoir project, DWR continues to participate in studies conducted by Contra Costa Water District (CCWD) and the USBR. DWR is also evaluating the potential of future participation in a Kellogg/Los Vaqueros project for the purposes of water quality enhancement, service reliability, and SWP water supply augmentation.

CCWD began the process of purchasing the entire Kellogg/Los Vaqueros watershed in early 1987. They retained James Montgomery Engineers to develop a project management plan by the end of 1987 and to manage the technical studies required in determining project feasibility. Environmental and land management plans are being addressed by Jones and Stokes, CCWD's environmental consultant during 1987 and 1988. DWR will parallel CCWD's studies with operations and cost studies needed to determine if SWP participation is desired. A steering committee will be established with members from South Bay and other SWP contractors to supervise the studies.

In fall 1985, the USBR expanded its Kellogg Reformulation Study to include a preliminary analysis of the Los Vaqueros Reservoir site. The study previously concentrated on Kellogg Reservoir and relocation of the Contra Costa Canal intake. The USBR published a planning report and environmental statement in summer 1987 and will conduct public hearings later in the year.

Because of the high costs to the SWP contractors associated with participation in these projects, DWR continues to analyze possibilities of modifying operations at Del Valle Reservoir to alleviate taste and odor problems associated with algae blooms in the Delta. DWR also may study the possibility of future exchanges with the USBR's San Felipe Project to provide enhanced water quality and reliability benefits to South Bay contractors.

Sacramento Valley Projects

Thirty years ago, conventional wisdom surrounding water development in California centered around construction of physical works to transfer surplus Northern California water to areas of deficiency in the San Joaquin Valley and Southern California (Bulletin 3, "The California Water Plan"). Institutional changes over the years altered the direction of water resources planning and development in the State. Such changes include court decisions and legislation regarding environmental protection and water quality standards; the defeat of three comprehensive water development plans during the late 1970s and early

1980s; changes in both State and federal government fiscal policies, which reduce the governments' abilities to fund public works; economic changes, most notably in the agricultural industry; and a growing recognition that means other than "construction of physical works" have the ability to reduce water demand or augment water supply.

These institutional changes all have had some effect, in varying degrees, upon the ability of agencies at all levels of government to plan and develop physical works for the storage and distribution of water.

SWP contractors indicated that a through-Delta facility should be in place before Northern California's water supply sources are developed further. Estimated unit costs for most of the Delta water transfer alternatives are below \$100 per acre-foot of new water supply made available. Construction of a water-transfer facility would substantially enhance the value of future Sacramento Valley projects because the projects' net contributions to SWP deliveries would be from 25 to 35 percent greater than without a Delta water transfer facility.

Alternatives under discussion by the water community include (1) interim purchase of water by the SWP pursuant to the Coordinated Operation Agreement, (2) purchase of water from CVP contractors, (3) water marketing, and (4) offstream storage south of the Delta. These alternatives have decreased the SWP contractors' enthusiasm to participate in financing Sacramento Valley projects. The apparent value of water from such projects has been reduced to \$100-150 per acre-foot, whereas the costs to develop the water from such projects range to above \$200 per acre-foot.

Cottonwood Creek Alternatives. Cottonwood Creek, in Shasta and Tehama counties, is the largest uncontrolled tributary of the Sacramento River and is a major contributor to flooding, particularly along the upper river. In the mid-1960s, the Corps of Engineers selected the Cottonwood Creek Project as the most suitable means of providing flood protection and developing additional water supply. In 1976, Congress

provided the Corps with funds for advanced engineering and design studies.

An engineering report and final EIS were released in January 1984. The report estimated the total first cost of the Cottonwood Creek Project at \$753 million. The annual payments by the SWP contractors would have been prohibitively high. Consequently, in June 1984, DWR asked the Corps to reanalyze the project, looking at methods for cost reduction. The Corps' reanalysis reduced the total first cost to \$571 million.

After discussions with the SWP contractors and a briefing before the California Water Commission in 1985, DWR decided not to participate in the project. Later that year, a letter explaining DWR's position to the Corps' proposal reiterated DWR's commitment to help the local counties with their flood problems and stated that DWR would move ahead with studies of less costly upstream reservoir alternatives. The letter also stated DWR's desire to work with the Corps on the flood control aspects of the alternative projects.

In June 1984, DWR initiated a reconnaissance investigation of tributary reservoirs in the Cottonwood Creek Basin. (Previous studies of these tributary reservoirs appeared in Bulletin 150, March 1965.)

In June 1985, DWR's Northern District published a memorandum report, "Cottonwood Creek Alternatives." The report recommends studying construction of a combination diversion and storage dam at the lower Dippingvat site, a storage dam at the Schoenfield site in the adjacent Red Bank Creek Basin, and a conveyance system connecting the two reservoirs.

The DWR analysis estimated the total first cost of three tributary reservoirs (Hulen, Fiddlers, and Dippingvat) at \$371 million (October 1984 price levels). Combined, the three reservoirs would provide a critical period supply averaging 146,000 acre-feet per year (30,000 acre-feet from Hulen, 73,000 from Fiddlers, and 43,000 from Dippingvat). The allocation of first cost to municipal and industrial water supply was estimated at approximately \$326 million, which would result in a unit cost of new SWP water supply competitive with that of the modified Corps project.

The three reservoirs would also reduce the 100-year peak floodflow at Cottonwood from 106,000 cfs to 44,000 cfs and would accrue annual flood control benefits of about \$7 million (October 1984 price levels).

Following the June 1985 report's recommendations, DWR began a two-year prefeasibility investigation of the Cottonwood Creek Alternatives in July 1985. The prefeasibility study was completed in July 1987.

The study emphasized the Dippingvat and Schoenfield sites, selected for initial study because they have had the least geologic exploration. They also have the potential (1) of a water supply with low unit cost, (2) of being the most valuable from a fishery enhancement standpoint, and (3) to supply the water demands of the CVP's Corning Canal, thereby saving pumping costs and raising the possibility of enabling the Red Bluff Diversion Dam to be operated to facilitate fish migration.

The studies were being conducted in cooperation with the USBR, Department of Fish and Game, Fish and Wildlife Service, and the Corps of Engineers to include fishery and flood control elements. Communication with Shasta and Tehama counties and cooperating agencies is maintained through an advisory group.

Auburn Dam and Reservoir. Auburn Dam and Reservoir is being planned as a multipurpose facility on the North Fork of the American River near Auburn. It will provide flood protection for the Sacramento area, hydroelectric power, recreation, instream flows, and water supply. In February 1984, then Secretary of the Interior Clark and Governor Deukmejian established a State/federal task force to review the possible completion of Auburn Dam.

At the second meeting of the task force in October 1984, the Auburn Dam working group, under the co-chairmanship of the Director of DWR and the Regional Director of the USBR, recommended an independent study of the Auburn area facilities. The task force concurred, and in May 1985 DWR contracted with Bechtel National, Inc. to determine whether a project could be constructed at a lower cost. The contract

work, jointly funded at \$100,000 each by DWR and the USBR, was completed and the final report was issued in November 1985.

Bechtel reviewed the costs of the USBR's proposed curved concrete gravity dam (designated CG-3) and investigated three additional sites within two miles of the CG-3 site as well as alternative dam types. Various size reservoirs from 800,000 acre-feet to 2,326,000 acre-feet were investigated.

In August 1986, the USBR offered a cost-sharing proposal to prospective water and power purchasers of a full sized (2,326,000 acre-feet) Auburn Reservoir project. No real interest was expressed, mainly because of the high cost of water supply from the project.

After the major storms in February 1986, the Corps of Engineers began a study of flood hydrology, damage potential, and alternative flood protection measures for the lower American River. The Corps' March 1987 report determined that Folsom Reservoir provides flood protection for a one-in-63-year storm, but larger storms could cause major flooding in highly developed areas along the American River. Modifications of Folsom Reservoir flood operating criteria and improvements of the downstream levees would help, but high levels of protection could be achieved only by construction of new storage upstream from Folsom.

In response to the need for additional flood control storage required on the upper American River, the USBR reported in July 1987 on a study of several alternative sizes of Auburn Reservoir:

- o single purpose flood control reservoirs of 315,000 acre-feet (100-year flood) and 650,000 acre-feet (250-year flood);
- o small (850,000 acre-feet) and mid-sized (1,250,000 acre-feet) multipurpose reservoirs to provide protection against the 250-year flood, power, limited water supply, and some improvement of flow levels in the lower American River; and
- o the originally proposed 2,300,000 acre-foot multipurpose reservoir.

All of the Auburn reservoirs would be operated in conjunction with a Folsom Reservoir flood storage reservation of 300,000 acre-feet.

In May 1987, Secretary of the Interior Hodel announced in Sacramento that he was very doubtful about the near-term prospects of the USBR building Auburn Dam. He cited the difficulty of obtaining federal financing and suggested that some nonfederal entity, such as the State, should take over sponsorship of the project. In accord with Secretary Hodel's suggestion, DWR made a very brief analysis that indicated a small multipurpose Auburn Reservoir may be within the State's financial capability. In July, based upon this analysis, DWR began a four-month reconnaissance investigation to further evaluate the potential for State financing and constructing a down-sized Auburn project. This study will allow local interests to assess a small State-sponsored project along with other flood control alternatives being analyzed by the Corps of Engineers.

DWR's position is that for a metropolitan area with the population of Sacramento, a relatively high level of protection should be provided. Auburn Dam appears to be the logical facility to provide this protection.

Ground Water Storage Programs

Kern Water Bank

In late 1985, DWR learned that a large piece of land overlying the Kern River Fan in Kern County was for sale. DWR is investigating the acquisition of a portion of that land to develop a ground water storage and extraction program. Such a program would be fully integrated into the SWP by conjunctive operations of available ground water storage space with water supplied by the SWP; at the same time increased local ground water recharge would be facilitated by the joint use and operation of State and local recharge facilities. Through conjunctive operation, greater amounts of water would be available for ground water storage and all contractors would benefit from increased SWP water deliveries in dry years.

The Kern Water Bank program involves acquiring land on which artificial recharge facilities, extraction wells, and related surface facilities would be constructed. The program would also incorporate appropriate in-lieu recharge projects. Project water would be stored in the basin during years of abundant supply and extracted in years of deficient supply. The program would help reduce future deficiencies in SWP deliveries and help current long-term overdraft conditions in the Kern County Ground Water Basin while incidentally providing wildlife benefits.

DWR completed a program EIR in 1986. Also during 1986, DWR analyzed and compared the effect of acquiring the necessary lands for the recharge program to the consequences of a "no project" alternative. DWR completed in April 1987 the prefeasibility study investigation and initiated feasibility investigations of the direct recharge project in July 1987. These investigations indicate that the program could increase SWP yield up to 144,000 acre-feet per year. The unit cost of water developed by this program would be about \$70 per acre-foot. This is competitive with other water supply augmentation proposals.

In 1987, DWR also began prefeasibility investigations of proposed in-lieu recharge projects. In-lieu recharge could require construction of additional surface distribution facilities or enlargement of existing facilities and delivery of SWP water to areas currently dependent upon pumped ground water. The amount of ground water not pumped would be deposited in the Kern Water Bank and credited to the SWP for later extraction.

Under the California Water Code, DWR may construct facilities that use ground water storage space south of the Delta to develop yield for the State Water Resources Development System. The Water Code also requires that prior to construction or operation of such facilities, DWR must have a contract with the SWP water supply contractor whose boundaries include the ground water basin. DWR and Kern County Water Agency began meetings in mid-1986 to develop principles to be used in negotiating the required contract. The Memorandum of Understanding

on these principles was signed by both parties in March 1987.

During 1986 State Senator Ruben Ayala introduced SCR92 (Resolution Chapter 160 of 1986). This resolution directs the Legislature's water policy committees to hold hearings regarding State acquisition of ground water basins prior to the purchase of those basins. In response to this legislation, DWR met to discuss the relevant aspects of the Kern Water Bank proposal with both the Senate Committee on Agriculture and Water Resources and with the Assembly Committee on Water, Parks and Wildlife. Both committees responded favorably to the proposed project.

Water Conservation

Conservation plays an important role in effective management of available water supplies.

Since about one-half of all urban water use is for landscaping, DWR is working with municipal agencies to improve efficiency in landscape water use. In addition to water conservation research, DWR has several ongoing programs to disseminate information about conservation opportunities and techniques. One of the most effective ways of achieving this goal is through the Xeriscape conference. Xeriscape—a

word coined from the Greek xeros, for dry, and landscape—is an annual conference promoting the design and planting of water conserving landscapes.

A particularly significant endeavor in the area of conservation is the California Irrigation Management Information System (CIMIS), developed under contract by the University of California for DWR. CIMIS is a project to inform growers of how much water their crops are currently using and will require within a projected time. The research and development stage of this project has been concluded and DWR started a three-year pilot program in 1986.

MWDSC-IID Proposal. MWDSC and the Imperial Irrigation District (IID) suspended negotiations regarding an agreement involving water conservation and Colorado River water deliveries. MWDSC proposed to finance water conservation measures in IID's service areas that would reduce the volume of Colorado River water now being diverted by IID. In return, MWDSC would receive up to 100,000 acre-feet per year from IID's entitlements to Colorado River Water. IID's last proposal included an increased cost per acre-foot and a shorter contract, which were unacceptable to MWDSC. IID's Board of Directors decided to suspend the negotiations.

Efficient irrigation is one form of water conservation used by SWP water contracting agencies

Local Water Supply Projects

SWP water supply can be augmented by developing projects in local areas. These local projects could be financed with available SWP funds and included in the Project, provided appropriate guidelines were met. The basic assumptions are that:

- o any necessary SWP contract amendments are executed;
- o yield developed by a local project as a unit of the SWP becomes part of the yield of the SWP, whether for the life of the project or for an interim period; and
- o the local project must not adversely affect either the costs or water deliveries of nonparticipating SWP contractors.

DWR conducts a feasibility study of a local project when it appears from both the conceptual and reconnaissance reports, and from general contractor support, that the project is advantageous. Projects must be feasible with respect to engineering, contractual, economical, and financial issues as well as be environmentally acceptable before they can become units of the SWP. Procedures for determining feasibility and provisions for contract amendments to allow for repayment of construction and operations costs have been established by DWR.

Local projects eligible to be added to the SWP may be financed with available SWP funds. Should construction costs of the local project exceed available SWP funds, local participation in financing the construction will be required. SWP financing will not exceed the actual construction cost of the local project. The local project will not become a unit of the SWP until an agreement is signed.

Santa Barbara County. Since mid-1981, DWR has completed review of six conceptual reports submitted by Santa Barbara County Flood Control and Water Conservation District (SBCFC&WCD). The six reports covered eight local projects, six of which warranted further investigation (enlarging Cachuma Reservoir, constructing Hot Springs Dam and Reservoir immedi-

ately upstream of Cachuma Reservoir, enlarging Gibraltar Reservoir, constructing Camuesa Dam and Reservoir, and water reuse projects proposed by Goleta Water District and the City of Santa Barbara).

DWR recognized that Santa Barbara County local projects could not be studied independently from the total countywide system. DWR also recognized that various combinations of local projects and a downsized Coastal Branch should be investigated. In January 1983, SBCFC&WCD and DWR agreed to conduct a cooperative reconnaissance study evaluating the various SWP alternatives available to Santa Barbara County. This study was released in April 1985 as "Santa Barbara County State Water Project Alternatives."

On the basis of this report, in July 1985, SBCFC&WCD asked DWR to conduct a feasibility study of enlarging the existing Cachuma Reservoir by raising Bradbury Dam on the Santa Ynez River. According to the District, an enlarged Cachuma Reservoir (with SWP participation in funding) could supply users in the southern part of the county with less expensive water than SWP water from the California Aqueduct.

After conferring with the other SWP contractors, DWR initiated the feasibility study for the Cachuma Enlargement Project in February 1986. Since the USBR owns the Cachuma Reservoir and is considering modifications to Bradbury Dam to increase its safety, the feasibility study is being conducted as a joint DWR- USBR effort. The study will combine the safety modifications with the raising of the dam to increase water supplies. The study's objectives are to (1) determine if the enlargement of Cachuma Reservoir is a feasible SWP alternative with respect to all engineering, geologic, economic, and environmental issues; (2) define the costs for this project accurately; (3) define a plan for financing the enlargement as a feature of the SWP; and (4) define the financial impacts on SWP contractors. The study is scheduled for completion by mid-1988.

San Luis Obispo County. In January 1984, San Luis Obispo County and DWR initiated a joint study to update the County's 1972 Master Water Plan. The

study's objective, with respect to the SWP, was to evaluate SWP water importation through the Coastal Branch in conjunction with identifying potential SWP local projects. The study's results, presented in early 1986, indicate that the most cost effective water supply alternative would be importation of SWP water. None of the potential local projects examined was recommended for a SWP feasibility study.

The County evaluated the results of this study, and on October 1, 1986 requested DWR to proceed with studies of the construction of the Coastal Branch. Planning studies (the preliminary design and EIR) for the Coastal Branch will be completed in mid-1989. (See "Coastal Branch, Phase II," in Chapter III.)

Water Marketing

One possible strategy for satisfying California's growing need for water is water marketing. An item of discussion for years, the water marketing concept has received renewed attention as financial, political, and environmental costs for developing new water supplies have increased.

The idea behind water marketing is that as costs for developing new water supplies increase, water rights holders would be willing to voluntarily sell some of that water to other water users willing to purchase the water. The market price of the water would act as an incentive for the water rights holder to sell rather than use the water in question. Water marketing may also serve as a financial inducement for water conservation measures that would result in making part of an existing water supply available for market.

Although several forms of water marketing and trading have been a part of California's water policy and practice for sometime, water marketing has not reached significant levels of operation. Statewide interest in water marketing has intensified during the 1980s. Recent State laws dealing with water marketing include:

- o A statewide policy to encourage the voluntary transfer of water and rights where consistent with the public welfare of the place of export and the place of import.

- o DWR and SWRCB are directed to encourage voluntary transfers of water and water rights, including technical assistance, to identify and implement water conservation measures which will make additional water available for transfer.
- o Local and regional public agencies are authorized to sell, lease, exchange, or transfer surplus agency water for use outside the agency.
- o DWR is required to:
 - (1) establish an ongoing program to facilitate the voluntary exchange or transfer of water;
 - (2) implement the various State laws pertaining to water transfers;
 - (3) create and maintain a list of entities seeking to enter into transfers; and
 - (4) prepare a water transfer guide.
- o State and local agencies are prohibited from denying a bona fide transfer of water or the use of unused capacity in a water conveyance facility under specified conditions.

In March 1986, DWR's Director established a Water Transfers Committee to respond to the interest in water marketing and water transfers. The committee was charged with reviewing DWR programs that would provide helpful information in evaluating and implementing transfers, reviewing proposed legislation, identifying known active transfer proposals, and assisting in clarification of DWR's role in water transfers.

In fall 1986, the committee developed two documents to facilitate the voluntary exchange or transfer of water within California. The first, "A Catalogue of Water Transfer Proposals" contains information on 31 current water transfer proposals in California; its aim is to inform and assist people or agencies interested in water transfers. This document is designed to help identify and advance proposals which will lead to improved management and use of California's water resources. A brief discussion of five specific aspects of each proposal is included: (1) potential third party

impacts, (2) legal or institutional considerations and constraints, (3) potential controversy, (4) unusual features of the proposal, and (5) status of the proposal.

The second document, "Questions to be Asked in the Case by Case Review of Water Transfer Proposals" consists of a list of over 50 questions which should be answered or considered when evaluating a transfer proposal.

DWR is working on the Water Transfer Guide, authorized by Section 482 of the Water Code, for completion in 1988.

CVP Purchases. Under contracts executed in 1975 and 1976, DWR conveys CVP water through SWP facilities to the turnout to Kern County Water Agency's Cross Valley Canal, west of Bakersfield. The Cross Valley Canal contracts, which extend to 1995, provide that conveyance of CVP water shall not interfere with, adversely affect the quality of, or add to the delivery cost of SWP water to SWP contractors. In recent years, DWR has also entered into annual conveyance agreements to serve other CVP customers in the San Joaquin Valley.

DWR expressed interest in purchasing existing CVP water supplies that the CVP will not need for at least 10 to 20 years. DWR is interested in acquiring such interim supplies to meet near-term SWP needs, while continuing to plan SWP facilities for the long term. The recently approved USBR-DWR Coordinated Operation Agreement provides that the USBR and DWR will negotiate a contract by December 31, 1988 for the sale of interim federal water to DWR and for the conveyance of federal water through SWP aqueduct facilities.

Blue Ridge Project. Yolo County Flood Control and Water Conservation District made a preliminary analysis of a northern Yolo County dam that would provide water supply in excess of local needs. The District contacted DWR to determine if the SWP was interested in water from such a project. Since the large reservoir at Blue Ridge would be expensive, DWR staff suggested investigating the possibility of a

smaller project to determine whether or not the needed benefits can be provided at a lower cost.

The Corps of Engineers is evaluating the flood control benefits that could be gained by construction of a Blue Ridge Dam. The outcome of their study will determine if Blue Ridge is economically feasible.

Cosumnes River. In January 1983, the counties of Sacramento, San Joaquin, Amador, and El Dorado joined to create the Cosumnes River Water and Power Authority (CRWPA). The purpose of the Authority is to investigate the feasibility of developing a water supply and hydroelectric power project that would help to satisfy the water supply needs of the member entities.

In November 1983, CRWPA proposed that DWR purchase the available firm yield of the proposed Cosumnes River Water and Power Project and finance an estimated \$6 million of precicensing costs. The project would consist of a series of perhaps eight dams with accompanying power facilities.

In August 1984, after a number of meetings, and following review and analysis, DWR declined to participate in the project at the time. In response to comments from DWR, the CRWPA Board of Directors in May 1985 directed its engineering consultant to develop a plan to build the project in stages. In December 1985, the board of directors agreed that they should proceed with Phase I of the project (two lower elevation reservoirs and certain power facilities) and use all revenues to repay the financing of the project, which is anticipated to take over 20 years. CRWPA is now in the process of securing a "turnkey operator" to engineer and handle financing for the project. Proposals for a "turnkey operator" were due December 19, 1986. No real definitive proposal was received by the December 19, 1986 deadline. The Board then decided to extend the deadline for proposals to mid-1987.

In May 1987 Sacramento County withdrew from the Authority. What this will mean to the proposed project has not been determined.

New Melones Water Exchange. Two San Joaquin County agencies, Stockton East Water District and

Central San Joaquin Water Conservation District, approached DWR with a plan to release the districts' New Melones contract water in dry and critical years. In exchange, the SWP would provide the two agencies financing for diversion, storage, and distribution facilities. The project has some attractive features as well as a number of institutional and local problems.

Discussions with the San Joaquin agencies moved

the process toward a Memorandum of Understanding and the EIR process by April 1987. At that point, however, Oakdale Irrigation District (OID) requested that the project be reviewed to see if all agencies in the area (OID, South San Joaquin Irrigation District, and the Calaveras County Water District) could also be accommodated in a joint project. Meetings between all parties are exploring this possibility.

CHAPTER VI

SWP POWER SUPPLY, PRESENT AND FUTURE

This chapter assesses SWP power needs, the resources available to meet those needs, and projected power costs.

Power Requirements

DWR develops and assesses short- and long-range aqueduct operational studies while preparing the annual water contractors' Statements of Charges. These studies are used to project the electrical capacity and energy required to operate the SWP in future years, including pumping to (1) deliver the SWP contractors' requested entitlement water, (2) provide recreation water, (3) replace reservoir and aqueduct losses, and (4) refill reservoirs south of the Delta. In comparison to entitlement deliveries, the latter factors are relatively minor. The operational studies do not project the amount of electrical capacity and energy required to deliver surplus water.

The SWP aqueduct operational studies are based upon median-year water supply conditions. SWP power requirements can vary significantly, however, depending upon the balance of water supply and water demand in a given year. Dry conditions in Northern California reduce the deliverable water supply, thereby decreasing power requirements if the SWP cannot deliver full entitlement requests. Power requirements also decrease if hydrologic conditions or requests for reductions in deliveries from local water agencies reduce the projected demands for SWP water in the San Joaquin Valley or Southern California. SWP power requirements would be larger than projected only if water demands increased or if additional pumping were required to refill reservoirs south of the Delta after a dry year (and sufficient water supplies were available).

Table 15 shows the projected entitlement water requests, the electrical energy required to operate the SWP, and transmission losses. Losses depend upon contractual arrangements with utilities providing transmission services. Table 15 also includes energy deliveries to the Southern California Edison Company

(SCE), pursuant to the 1979 DWR-SCE Power Contract and the 1981 DWR-SCE Capacity Exchange Agreement. (See "Exchanges" in this chapter.)

In addition to energy requirements, DWR also considers electrical capacity requirements--the rate of delivery or demand for electrical energy during a given time period. Since DWR has flexibility in regulating the SWP's electrical demand, the SWP is operated to minimize pumping demand during on-peak periods, when capacity and energy costs are greatest. Thus, the SWP's maximum electrical capacity requirement occurs during off-peak periods (nights, weekends, and holidays).

Table 16 shows the projected SWP on-peak and off-peak maximum pumping demands (capacity requirements) for 1990 and 2000 during the months of highest system use. Off-peak maximum monthly pumping loads are projected to occur in the winter, thus taking advantage of seasonal power cost differentials. On-peak maximum monthly pumping loads are projected to occur in the spring. The total capacity requirements in Table 16 consist of pumping loads, reserve margin requirements, transmission losses, and DWR capacity obligations to SCE.

Power Resources

Basic goals of DWR's long-range power supply program are:

- o to obtain adequate reliable, competitively-priced power supplies and transmission services, so the SWP will be capacity and energy self-sufficient and can operate as an independent and interconnected utility;
- o to develop and manage power resources to provide flexibility in meeting water delivery requirements at minimum cost and to maximize benefits to the people of California; and
- o to minimize the impact on the SWP when major contractual arrangements expire in 2004.

TABLE 15. PROJECTED WATER DELIVERIES AND ENERGY REQUIREMENTS

	Calendar Year			
	1990	1995	2000	2004
Entitlement Requests (thousands of acre-feet)				
Feather River Area	4	31	33	38
North Bay Area	27	43	52	56
South Bay Area	158(a)	184	188	188
San Joaquin Valley Area	1,355	1,355	1,355	1,355
Southern California Area	1,393	1,456	1,628	1,710
Central Coastal Area	-	70	70	70
Total	2,937	3,139	3,326	3,417
Energy Requirements (millions of kWh)

Total Capacity Needed to Pump Entitlement Water	623	1,525	771	1,823
Transmission Losses (5% of Pumping)	31	76	39	91
Reserve Margin (10% of Pumping and Losses)(b	65	160	81	191
Capacity Obligation to SCE	710	485(c	710	485(c
Total SWP Capacity Requirement	1,429	2,246	1,601	2,590

a) Less than 0.5 MW.

b) During the on-peak period, 10 percent of the pumping load may be insufficient to meet contractual requirements for spinning reserve or Western Systems Coordinating Council standards for regulation and frequency bias. Additional spinning reserve may be required based on the largest single contingency.

c) Includes 350 MW of Hyatt-Thermalito power under contractual obligation to SCE, but it is anticipated that SCE will have little or no demand for this capacity during off-peak periods.

DWR's power supply program seeks to (1) use existing SWP resources for maximum benefit to the SWP, and (2) reduce dependence on purchased power from utilities that may rely on fuel oil and natural gas for the major portion of their power generation. To achieve these goals, DWR has constructed and acquired hydro, coal, and geothermal power resources, and has contracted to purchase capacity and energy from other utilities with similar resources. Figure 11 shows the SWP power facilities in operation or under construction. Power resources available to the SWP are described in the following sections.

Hydro

Economical hydroelectric generation provides the largest share of the SWP power resources. The 900 MW available at Hyatt-Thermalito supplies about 2.4 billion kWh in a median water supply year. Generation at the existing SWP power recovery plants (San Luis, Alamo, Devil Canyon, Warner, and Castaic) varies with water conveyance. The combined 648 MW capacity at these five plants will be able to recover about one-fourth of the total energy used for SWP pumping.

Alamo Powerplant, a 17-MW recovery facility on the East Branch, began commercial operation in July 1986. It recovers energy previously dissipated in the Cottonwood Chutes. A second generating unit will be installed in conjunction with enlargement of the East Branch of the California Aqueduct.

An additional SWP hydroelectric facility was built at Thermalito Diversion Dam near Oroville. The 3-MW power plant started operational testing and limited commercial operation in July 1987.

For energy accounting purposes in this bulletin, basic SWP resources include the total output of the Hyatt-Thermalito, Devil Canyon, and Alamo facilities. The energy returned off-peak by SCE is treated separately, as described in the discussion under "Exchanges."

DWR purchases hydro generation developed by others. For example, the output of the 165-MW Pine

Flat Powerplant, owned by the Kings River Conservation District, provides an average of 400 million kWh per year to the SWP. DWR also contracts for the output from five hydroelectric facilities owned and operated by MWDSC. (See following discussion of "Exchanges.")

Exchanges

The 1979 Power Contract and the 1981 Capacity Exchange Agreement with SCE are also significant SWP power resources. Services under these contracts were available in April 1983 and April 1987, respectively.

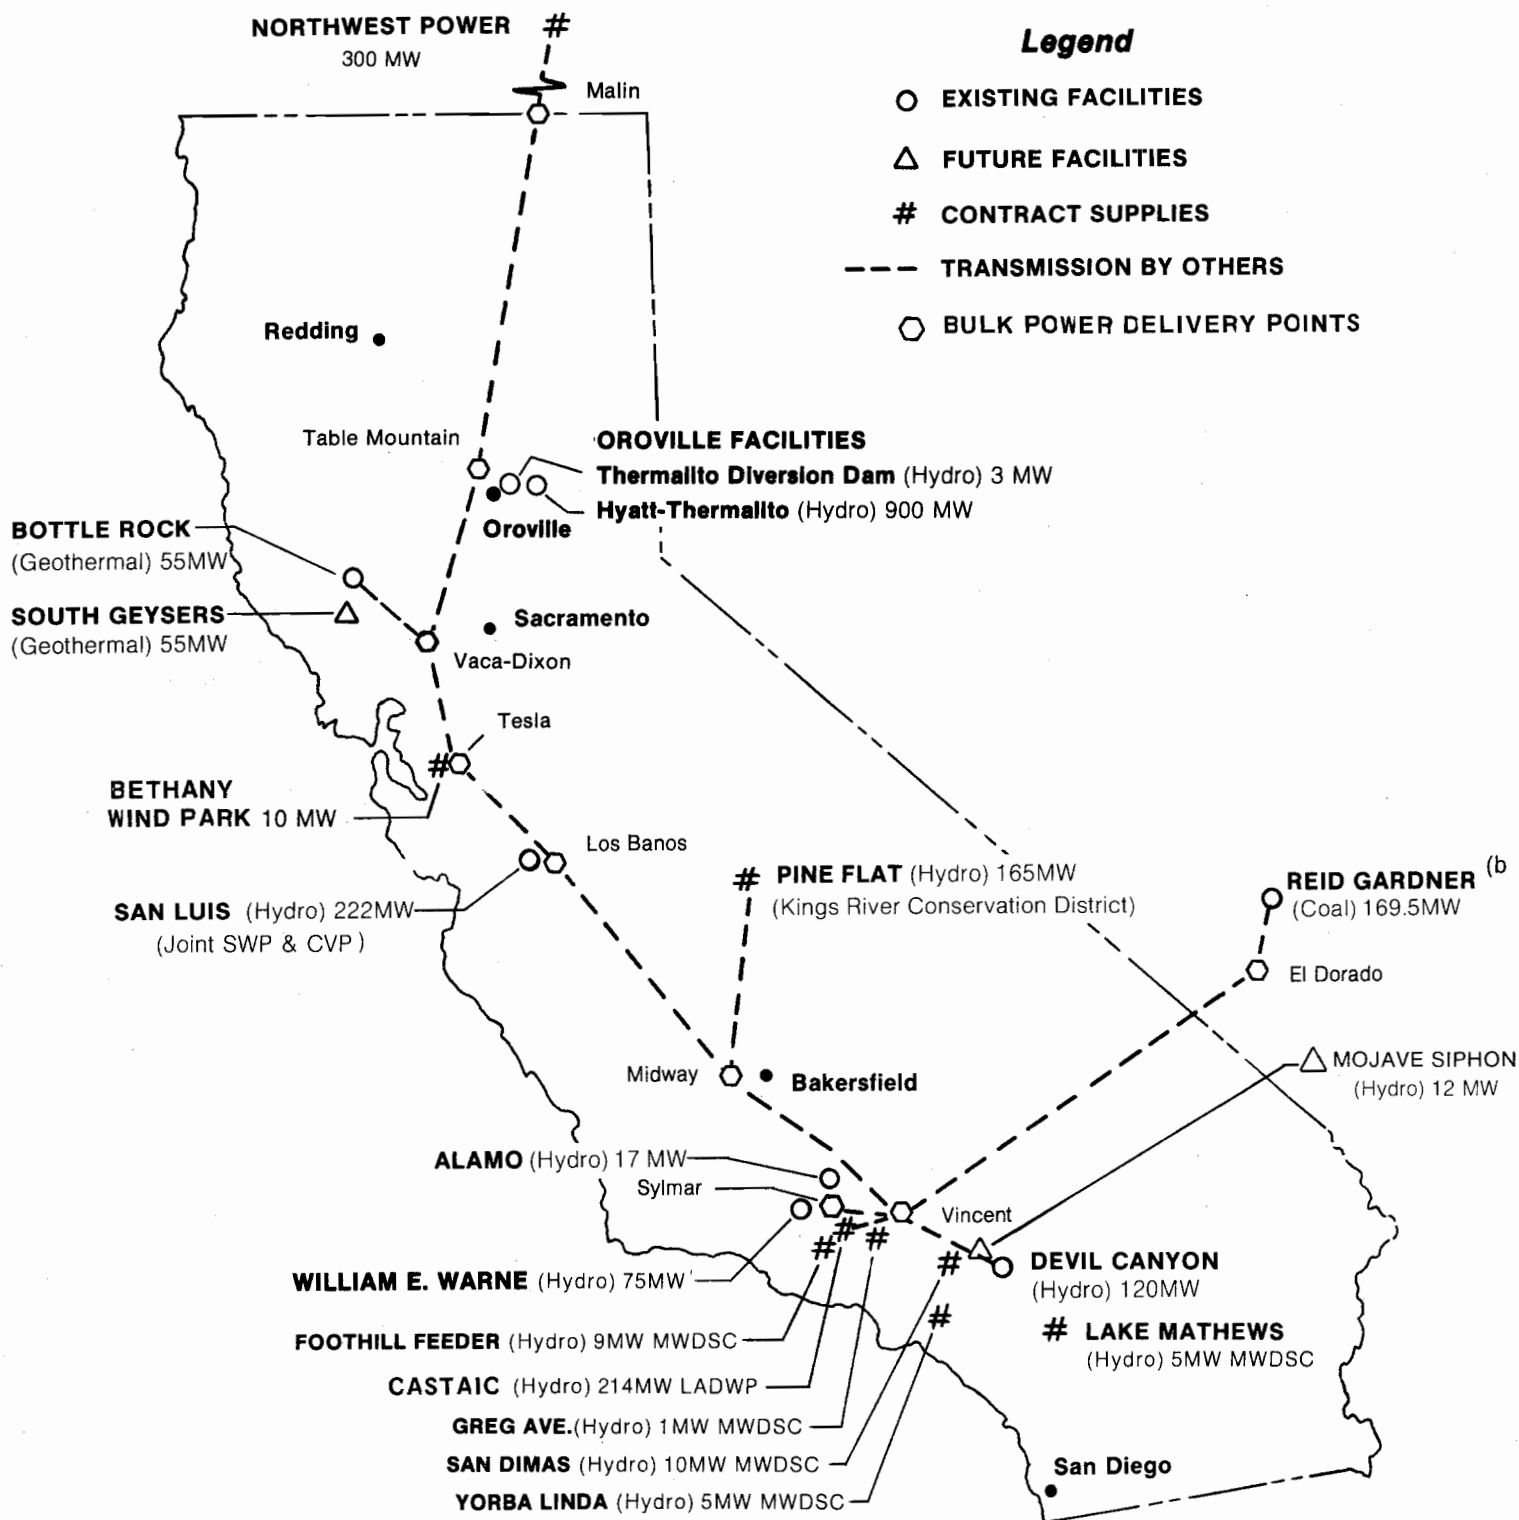

Under the Power Contract, DWR delivers to SCE:

- o up to 350 MW of capacity and approximately 40 percent of the energy from Hyatt and Thermalito power plants;
- o all of the energy output of Devil Canyon Powerplant up to a maximum delivery rate of 120 MW; and
- o all of the energy output of Alamo Powerplant up to a maximum delivery rate of 15 MW.

In return, the SWP receives a greater amount of energy than it delivers to SCE. This energy is delivered during off-peak hours. This additional energy to the SWP through this transaction is projected to range from about 2.1 billion kWh in 1990 to 1.2 billion kWh annually beginning in 2001. The additional energy is determined through a complex formula that includes factors reflecting oil and natural gas prices, so projections may change with subsequent revisions.

Under the Capacity Exchange Agreement, (CEA) DWR will deliver to SCE during on-peak periods up to 412.5 million kWh per year at a delivery rate of 225 MW. As with the Power Contract, SCE will return a greater amount of energy, during off-peak hours, than it receives. SCE will also waive 75 percent of DWR's costs for the firm transmission service as shown in Exhibit II of the Power Contract and Firm Transmission Agreement. The CEA is being renegotiated to provide operational flexibility to DWR.

FIGURE 11. SWP POWER FACILITIES ^(a)

NOTES:

- Power exchange and transmission services provided by Pacific Gas and Electric Co., Southern California Edison Co., San Diego Gas and Electric Co., and Los Angeles Department of Water and Power.
- SWP owns a 169.5-MW share of Reid Gardner Unit No. 4, but under agreement with Nevada Power Company, receives up to 226 MW on an interruptible basis.

DWR contracts for the energy output from five hydro plants owned by MWDSC. Under the DWR-SCE Power Contract, however, SCE receives energy from four of the five plants, then returns exchange energy to the SWP during off-peak periods. Under a 1983 agreement with the Los Angeles Department of Water and Power (LADWP) the energy from the fifth MWDSC hydro facility (Greg Avenue) is made available by DWR to LADWP, and LADWP later returns exchange energy off-peak to DWR. Combined, the five MWDSC facilities are rated at 30 MW.

Through additional interchange agreements, DWR has expanded its opportunities for selling and purchasing economy energy with several utilities in California, the Pacific Northwest, and the Southwest. These agreements provide for hourly or daily sale and purchase of economy energy by DWR. This permits more efficient use of generation capacities, more efficient scheduling of energy deliveries, and general economies through interchange of energy. The terms of these agreements are generally between 25 and 30 years.

Coal

DWR and the Nevada Power Company (NPC) are joint owners of the Reid Gardner Unit No. 4, a coal-fired facility located east of Las Vegas. DWR has received energy from this source since July 1983. The original Units 1, 2, and 3, with a combined capacity of 330 MW, are owned exclusively by NPC. Unit 4 is jointly owned by DWR (67.8 percent) and NPC (32.2 percent), which gives DWR a 169.5-MW share of ownership (based upon the rated capacity of 250 MW). Under the participation agreement with NPC, DWR receives up to 226 MW from Reid Gardner Unit No. 4 in exchange for NPC's limited right to interrupt DWR deliveries. DWR receives return energy or payment based upon combustion turbine cost whenever NPC schedules energy from DWR's share of the unit output. The scheduling of energy to the SWP depends upon the manner in which NPC exercises its rights to obtain peaking capacity through interruption of SWP service. After 15 years of operation, NPC will have an annual option to buy back up to 6 percent of the

original DWR share based upon the 250 MW rated capacity.

Geothermal

DWR's Bottle Rock Powerplant in the Geysers area of Lake County began operation in February 1985. Bottle Rock Powerplant is owned, operated, and maintained by DWR. Geothermal steam for the plant is provided under a contract with MCR Geothermal Corporation and others.

DWR's second geothermal facility is the South Geysers Powerplant in Sonoma County. Three steam wells were originally drilled on the property; these provided the basis for DWR's decision to construct the plant. Subsequent analyses by geothermal reservoir consultants indicated that the available steam resources were not capable of supporting a 55-MW power plant. Effort was then concentrated upon assessing all steam supply alternatives and securing an assured supply.

Because of the reduced need for additional power resources for the SWP and the unsettled circumstances in the geothermal steam business, DWR has deferred the decision to complete the South Geysers plant until 1993. Contractual situations between steam producers and other utilities have not been resolved to allow for the sale of supplemental steam to DWR. The present steam price structure is not conducive to further development by most producers.

Wind

DWR has an agreement with TERA Power Corporation to purchase wind-generated electrical energy delivered from the Bethany Wind Park to South Bay Pumping Plant near Tracy. At the end of 1986, about 145 of 200 planned wind turbines were operational. When the Bethany Wind Park is fully completed, TERA will have an installed wind turbine capacity totaling 10 MW.

Power and Interruptible Energy Purchases

Power purchases are an important component of DWR's power supply program. To make optimum use of all resources and to obtain economical power,

DWR is party to power contracts with several utilities. DWR has long-term contracts providing options to purchase power from SCE and the Bonneville Power Administration. During the past year, DWR made firm purchases of power from Portland General Electric Company and Pacific Power and Light Company under short-term purchase agreements. Other potential purchases are also being evaluated. Table 17 summarizes the major long-term SWP power contracts.

In addition to power purchases, DWR has several agreements for the purchase of interruptible economy energy. Utilities with which DWR has executed agreements for such economy energy purchases are also included in Table 17.

Other Projects

Potential projects for the DWR power supply program are continually being studied and evaluated. These projects are evaluated by such factors as ability to meet anticipated power requirements, cost, financing considerations, environmental impacts, and operating characteristics. On the basis of these evaluations, a project may be recommended for inclusion, exclusion, or deferral in the program.

Projects recommended for inclusion in the program are Mojave Siphon Powerplant (one unit) and two additional units at Devil Canyon Powerplant. Projects under consideration include a new unit at Alamo Powerplant, an additional unit at Mojave Siphon, additional capacity at the Hyatt-Thermalito facilities, two power plants on the Coastal Aqueduct, and a new off-stream pumped storage power plant (Los Banos Grandes).

SWP power studies assume that power recovery facilities will be constructed on the Coastal Branch, Phase II; however, as discussed in Chapter III, the Coastal Branch is still under review.

DWR completed the evaluation of the additional load management of the Banks Delta Pumping Plant's final four units. The resultant shift from on-peak to off-peak pumping will reduce costs.

DWR is a participant in the Heber Binary Geothermal Demonstration Project, managed by the San Diego Gas and Electric Company. Under the participation agreement, DWR receives the benefits from all design, construction, and operating experience, but is not obligated to receive or pay for any plant capacity or energy.

DWR owns a Federal Geothermal Leasehold in Lake County (the Binkley Leasehold), and is working on a plan to assure leasehold development. Such a plan will preserve the lease and hold the resource for the best use by DWR.

Transmission Service

DWR must make arrangements for transmission service between SWP resources and loads, and to inter-connected utilities for purchases, sales, and exchanges of power. At present, most SWP transmission needs are met by contractual arrangements with California utilities (Table 17). DWR's long-term objectives include acquisition of its own transmission facilities between resources and loads where feasible. To this end, DWR will participate in studies to:

- o develop additional transmission capability from the Oregon-California border to Southern California, and extend existing transmission agreements;
- o develop alternative transmission paths between DWR resources and loads to achieve a greater degree of operating flexibility; and
- o develop additional transmission arrangements to the Southwest.

The temporary 270 MW interconnection, installed in May 1983, between the Hyatt-Thermalito Line No. 1 and the Western Area Power Administration (WAPA) 230-kV Cottonwood-Elverta No. 3 line was removed on September 26, 1986. The interconnection allowed DWR to send up to 270 MW from Hyatt Units 1 and 2 over WAPA's transmission line to Tesla Substation. This action was necessary to prevent potential extensive curtailments of firm Hyatt-Thermalito power. This condition was relieved by the installation of the Table Mountain-Tesla reinforcements which have been in commercial operation since May 1987.

TABLE 17. SUMMARY OF

Contract Title (Short Form) and Date Signed	With	Providing	To
1. West Branch Cooperative Development (9/2/66)	Los Angeles Department of Water and Power	Joint development of Castaic Power Project on the California Aqueduct, West Branch	1/1/42
2. Extra High Voltage (EHV) Intertie (8/1/67)	Pacific Gas and Electric Co., Southern California Edison Co., San Diego Gas and Electric Company	300 MW of EHV transmission from the Oregon border to specific points in California by SWP and purchase of off-peak energy to the extent of purchased transmission capacity	1/1/05
3. Bonneville Power Administration (9/5/67)	Bonneville Power Administration	Purchase of surplus BPA energy at Oregon-California border	9/20/87
4. Fourth Supplemental Resolution, Oroville (9/28/77)	DWR Resolution	Replacement of Power Sale Contract, effective 4/1/83	Repayment of last Bonds or 11/29/17, whichever later
5. MWD Hydro (1/9/78)	The Metropolitan Water District of Southern California	Effective 4/1/83 provides for purchase of output from five small hydro developments totaling 29.5 MW of capacity	At least to 4/1/08
6. San Diego Gas and Electric EHV Settlement (5/25/78)	San Diego Gas and Electric Company	Establishes extent of SDG&E's obligation to supply off-peak energy during the remaining term of the EHV contract, and resolves disputes concerning DWR's use of its EHV transmission entitlement	1/1/05
7. Reid Gardner Unit 4 Participation (7/11/79)	Nevada Power Company	Joint ownership of an additional unit at an existing coal-fired plant near Las Vegas	7/26/13
8. Power Contract (10/11/79)	Southern California Edison Company	Commencing 4/1/83, provides: a. transmission service in SCE's service area b. rights to purchase up to 300 MW firm capacity and/or spinning reserves c. rights to purchase off-peak energy d. exchanges of off-peak energy for 485 MW of DWR's on-peak capacity	1/1/05
9. Firm Transmission Service Agreement (10/11/79)	Southern California Edison Company	Transmission service between El Dorado and Vincent substations	7/26/13
10. Edison-DWR 1979 (10/11/79)	Southern California Edison Company	Establishes rate of SCE's off-peak energy under the EHV contract effective 1/1/83	1/1/05
11. Pine Flat (11/6/79)	Kings River Conservation District	Purchase of hydroelectric output from Pine Flat Powerplant	4/1/34
12. Emergency Services Agreement (7/21/80)	Southern California Edison Company	Emergency service between the parties	12/31/04
13. Capacity Exchange Agreement (9/17/81)	Southern California Edison Company	Effective 4/2/87, exchanges 225 MW of on-peak capacity from Hyatt-Thermalito for: a. up to 600 MW of SCE's capacity during off-peak periods b. up to 225 MW of SCE's capacity during partial-peak periods c. a 75% reduction in transmission service charges for transmission under Power Contract and Firm Transmission Service Agreement	12/31/04
14. Agreement for Sale of Interruptible Energy (3/8/82)	British Columbia Hydro and Power Authority	Sale of B.C. Hydro surplus interruptible energy to DWR	12/31/91 or upon one month notice by either party
15. Agreement for Sale of Nonfirm Thermal Energy (3/8/82)	Pacific Power and Light Company	Sale of nonfirm thermal energy to DWR	12/31/91 or upon one month notice by either party
16. Comprehensive Agreement (4/22/82)	Pacific Gas and Electric Company	Up to 1,465 MW of firm energy transmission service in PG&E's service areas effective 4/1/83	12/31/04 with option for 10-year extension
17. Generation Replacement Agreement (6/14/82)	Southern California Edison Company	Provides energy from DWR resources to replace lost generation of two SCE plants on San Bernardino Valley Municipal Water District system	6/1/12
18. Energy Purchase Agreement (6/14/82)	San Bernardino Valley Municipal Water District	District to pay DWR for energy supplied to SCE under the Generation Replacement Agreement, and give DWR option to develop four small hydro plants on District's system	6/1/12
19. Power Sale Agreement (5/14/82)	TERA Power Corporation	Sale of energy to DWR from wind-powered generation facilities constructed by TERA	5/3/02
20. Southern California Edison EHV Settlement Agreement/Pacific Gas and Electric EHV Settlement Agreement (12/31/82)	Southern California Edison Company/Pacific Gas and Electric Company	Establishes the extent of DWR's ability to exercise its rights to 300 MW of EHV transmission from the Pacific Northwest. PG&E Agreement also defines the rate for EHV off-peak energy purchases	12/31/04 and 1/1/05, respectively
21. Interchange Agreement (6/29/83)	San Diego Gas and Electric Company	Energy exchanges between SDG&E and DWR	7/31/10
22. Greg Avenue Powerplant Energy Exchange Agreement (8/29/83)	Los Angeles Department of Water and Power	Exchange of DWR's entitlement to Greg Avenue Powerplant energy for credit and off-peak energy	Until terminated by either party upon two-year advance written notice

MAJOR SWP POWER CONTRACTS

Contract Title (Short Form) and Date Signed	With	Providing	To
23. Economy Energy Agreement (9/22/83)	Los Angeles Department Water and Power	Bilateral sale of economy energy	Until terminated by either party
24. Coordination Agreement between SCE and DWR (10/8/83)	Southern California Edison Company	Nonfirm energy sales to SCE, short-term exchanges, allows SCE to bank energy at San Luis Reservoir, and allows for seasonal capacity and energy exchange	12/31/05
25. Service Agreement (2/24/84)	Portland General Electric Company	Sale of nonfirm energy to DWR	12/31/87
26. Energy Interchange Agreement (6/6/84)	Tucson Electric Power Company	Bilateral sale of economy energy	12/31/08
27. Energy Interchange Agreement (7/27/84)	City of Pasadena	Bilateral sale of economy energy and interruptible transmission service	12/31/11
28. Energy Interchange Agreement (7/27/84)	City of Riverside	Bilateral sale of economy energy	12/31/13
29. Energy Interchange Agreement (7/27/84)	City of Glendale	Bilateral sale of economy energy	12/31/12
30. Energy Interchange Agreement (7/31/84)	City of Burbank	Bilateral sale of economy energy	12/31/13
31. Interconnection Agreement (7/31/84)	Nevada Power Company	Bilateral sale of economy energy	12/31/06
32. Energy Interchange Agreement (9/17/84)	City of Anaheim	Bilateral sale of economy energy	12/31/13
33. Service Agreement (11/1/84)	Montana Power Company	Sale of nonfirm energy to DWR	Until terminated by either party
34. Economy Energy Agreement (11/6/84)	Salt River Project	Bilateral sale of economy energy	12/31/13
35. Energy Interchange Agreement (12/1/84)	Northern California Power Agency	Bilateral sale of economy energy	12/31/09
36. Edison-DWR Interruptible Transmission Service Agreement (12/19/84)	Southern California Edison Company	Interruptible transmission service between Palo Verde Generating Station and Vincent Substation, between El Dorado and Mead substations, etc.	12/31/04
37. Service Agreement (1/7/85)	Idaho Power Company	Sale of nonfirm energy to DWR	Until terminated by either party
38. Energy Interchange Agreement (4/18/85)	El Paso Electric Company	Bilateral sale of economy energy	12/31/10
39. Interconnection Agreement (4/18/85)	Portland General Electric Company	Bilateral sale of economy energy	12/31/10
40. Interconnection Agreement (4/30/85)	Pacific Power and Light Company	Bilateral sale of economy energy	12/31/09
41. Energy Interchange Agreement (4/30/85)	Seattle City Light	Bilateral sale of economy energy	12/31/15
42. Power and Energy Interchange Agreement (6/3/85)	Arizona Public Service Company	Bilateral sale of economy energy	12/31/10
43. Energy Interchange Agreement (8/20/85)	City of Santa Clara	Bilateral sale of economy energy	12/31/08
44. Service Agreement (8/13/85)	Washington Water Power Company	Sale of nonfirm energy to DWR	Until terminated by either party
45. Service Agreement (9/1/85)	Western Agency Power Administration (Sacramento Area Office)	Sale of nonfirm energy to WAPA	12/31/04
46. Economy Energy Agreement (7/1/86)	City of Azusa	Sale of nonfirm energy by DWR	12/31/90
47. Economy Energy Agreement (7/1/86)	City of Banning	Sale of nonfirm energy by DWR	12/31/90
48. Economy Energy Agreement (1/12/87)	City of Colton	Sale of nonfirm energy by DWR	12/31/90
49. Power Sale Agreement (1/1/87)	City of Vernon	Sale of 27 MW to city	12/31/88
50. Power Sale Agreement (1/1/87)	City of Azusa	Sale of 5 MW to city	12/31/88
51. Power Sale Agreement (5/12/86)	Nevada Power Company	Sale of firm capacity and associated energy	9/15/87

At PGandE's request and expense, the temporary interconnection was reconnected on May 9, 1987, to assist the PGandE system during summer 1987. The interconnection is expected to remain in effect for the rest of 1987.

DWR requested that PGandE construct reinforcements between Los Banos and Midway to provide about 1,000 MW of firm transmission service to DWR in accordance with the Comprehensive Agreement. The estimated cost of the reinforcements is about \$80 million; scheduled operating date is December 1990.

DWR has contracted through 2004 for 300 MW of transmission capacity in the extra high voltage (EHV) Pacific Northwest Intertie from the Oregon-California border to the Table Mountain, Tesla, Los Banos, and Midway substations. DWR plans to retain its entire 300-MW share of this EHV transmission capacity in order to maintain access to Northwest power markets, where purchases of less expensive power and exchanges could continue to result in significant savings for the SWP. Through membership in the Western Systems Coordinating Council, DWR has monitored studies conducted by the Bonneville Power Administration, Pacific Power and Light Company, PGandE, and SCE to upgrade the existing Pacific Northwest Intertie to 3,200 MW.

DWR signed a Memorandum of Understanding with the major California public and private electric utilities pertaining to construction and operation of a third 500-kV transmission line connecting California with the Pacific Northwest. If the transmission line is built and certain other conditions are met, DWR will have the option to purchase a portion of the transmission capacity presently estimated at about 100 MW and an option to extend its 300 MW of transmission capacity entitlement for the life of the existing Pacific Intertie lines.

The 1982 Comprehensive Agreement with PGandE provided DWR the option to purchase a share of the Geysers-Lakeville 230-kV transmission line. On May 25, 1984, DWR entered into an interim agreement with PGandE for the ownership of 165 MW of capacity

on the Geysers-Lakeville line. DWR completed payment for its share of the transmission line in February 1985. The agreement preserves DWR's right for co-tenancy of the line. A definitive agreement has been negotiated, which DWR executed in July 1987, after reevaluating the SWP's total transmission needs for geothermal development in the Geysers Area.

The 1982 EHV Settlement Agreement with PGandE provided DWR the option to purchase 75 percent of the Stub Transmission Line (Midway to Wheeler Ridge line), which serves Buena Vista, Wheeler Ridge, and Chrisman Wind Gap pumping plants. The Settlement Agreement also established principles for this purchase. A contract for the purchase, operation, and maintenance of the Stub Transmission Line was signed on November 15, 1984. The closing of the purchase of this line is expected to occur in 1987. DWR ownership of the Stub Transmission Line will result in less costly and more reliable transmission service.

Studies are also being made for a line between the Banks Delta and South Bay pumping plants. Such a line may provide additional flexibility for powering the South Bay Pumping Plant.

DWR signed an interruptible transmission agreement on December 19, 1984, with SCE to provide additional transmission service between Arizona and the DWR system. Additional transmission arrangements are being evaluated and pursued to expand opportunities for interchanges with other utilities.

In late 1986, DWR entered into two agreements with PGandE. The first, signed in November, is a Rate Settlement Agreement. Using a specific formula, this agreement allows a change in the 1987 transmission rates as well as in future rates. The formula takes into account economic trends. The second agreement was entered into in December. That agreement is for construction and maintenance of transmission tie-lines from the PGandE system to the Cordelia and Barker Slough pumping plants.

DWR also entered into two agreements to participate in first stage planning studies of the Desert Southwest (DSW) Project. The DSW Project is a proposed di-

rect current line from Midpoint Substation near Twin Falls, Idaho, to Mead Substation in Nevada. The studies will be completed over a 32-month period.

DWR's participation in the DSW Project is based upon a projected need for 350 MW of bulk power transmission from the Pacific Southwest. The DSW Project, combined with other transmission facilities between Mead and Vincent substations, could provide some of that transmission.

The agreements will provide (1) valuable transmission planning information in the DSW Project area, and (2) a DSW Project transmission option of 40 to 65 MW to DWR between 1995-1997. DWR's decision to participate in the DSW Project's design and construction phase is contingent upon either satisfactorily resolving participation in the Mead-Adelanto DC Project or some other transmission arrangement. A transmission arrangement is necessary to deliver power to Vincent Substation.

Sales

DWR enters into agreements with many utilities for short-term power sales and economy sales (sales of nonfirm energy). These agreements provide DWR with markets to sell power that is in excess of SWP needs. Surpluses may develop as a result of reduced demands for water deliveries in a given year or an abundance of hydro energy available from SWP facilities.

Payment to DWR for the sales can be in cash or, in some instances, return energy during periods of SWP power needs. For example, in 1986 DWR sold or exchanged energy with:

- o Cities of Anaheim, Burbank, Glendale, Pasadena, Riverside, Santa Clara, and Vernon;
- o El Paso Electric Company;
- o Los Angeles Department of Water and Power;
- o Nevada Power Company;
- o Northern California Power Agency;

- o Pacific Gas and Electric Company;
- o Salt River Project;
- o San Diego Gas and Electric Company;
- o Southern California Edison Company; and
- o Western Area Power Administration (Sacramento area).

DWR entered into the Western Systems Power Pool Agreement with 14 other utilities in the western states. The agreement provides for a two-year experiment to test market-based pricing for the following services: economy energy, unit commitment, short-term capacity/energy sale or exchange, and transmission service. During the two-year term, the parties may enter into mutually beneficial transactions for the above services.

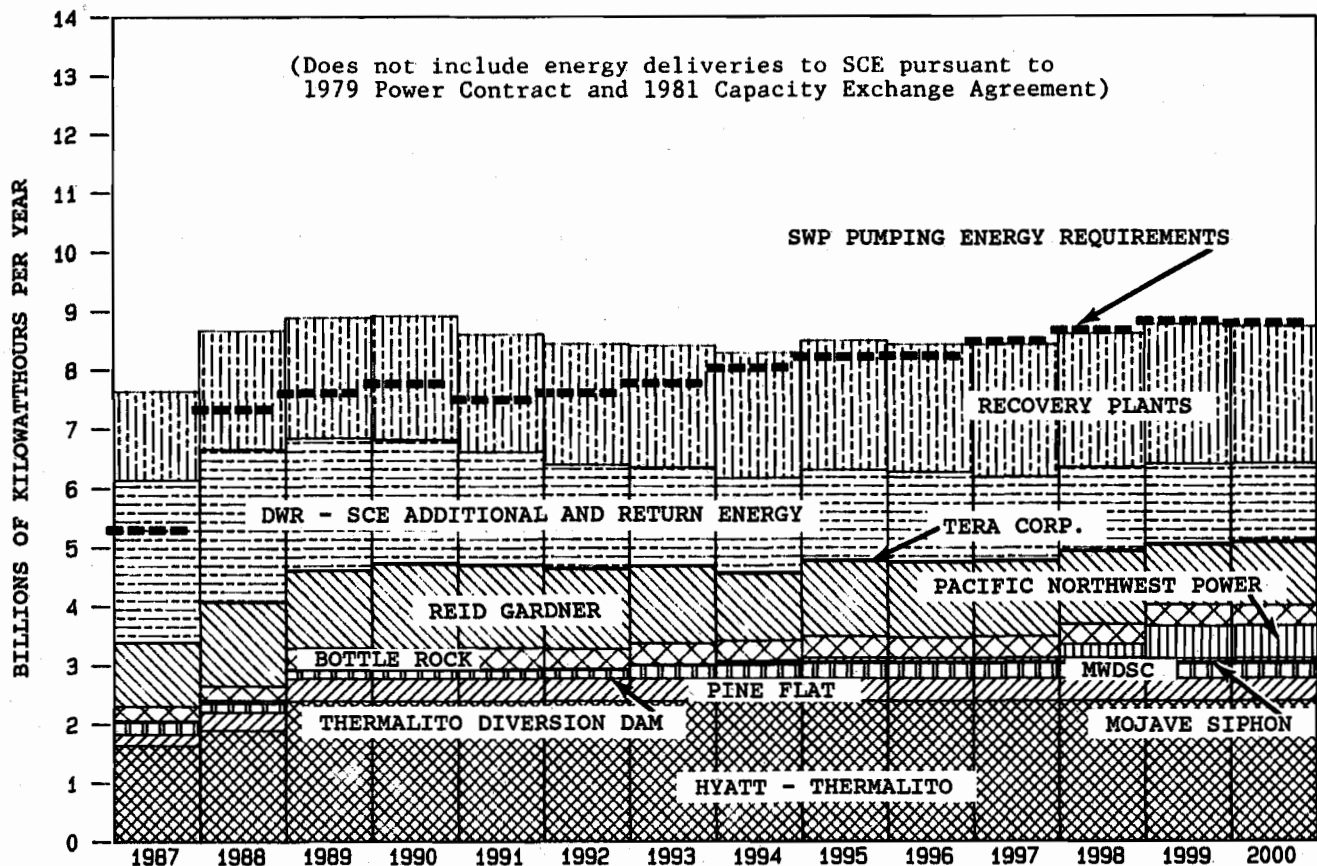

Negotiations continue with various Pacific Northwest utilities to develop long-term arrangements for purchases, sales, and exchanges to take full advantage of DWR's 300 MW of transmission capacity on the Pacific Northwest Intertie. To reduce SWP costs, DWR intends to use this transmission capacity to the maximum extent possible. Power will be purchased for resale, as well as for direct SWP use.

Negotiations also continue with California and Southwest utilities for purchases and sales of power to maximize power benefits to the SWP.

Comparison of Power Requirements and Resources

Figure 12 compares projected SWP annual pumping energy requirements with available resources for the remainder of the century. SWP annual requirements are based on energy needed to deliver entitlement and other related water, including associated transmission losses. The energy resources include allowances for scheduled maintenance and forced outages. DWR generally determines energy output from hydroelectrical resources on statewide median water supply conditions. However, DWR bases its power resources planning for the succeeding year on a lower quartile inflow to reservoir; that is, statistically the assumed inflow would be exceeded three out of

**FIGURE 12. ANNUAL SWP PUMPING ENERGY REQUIREMENTS
AND RESOURCES**

SWP energy requirements are based on delivery of requested entitlement water, recreation water, water to replace reservoir storage south of the Delta (all assuming median statewide water supply conditions). All associated transmission losses are included. Placement of resources in figure does not indicate a priority of use or need. Identified resources are:

2000 Supply
(billions of kWh)

Hyatt-Thermalito.....	2.39
Pine Flat (purchase under contract with Kings River Conservation District).....	0.39
MWDSC Hydro (output of five small hydro plants on the MWDSC distribution system, purchase under contract).....	0.25
Thermalito Diversion Dam (operational in 1987).....	0.02
Mojave Siphon (operational 1994).....	0.08
Pacific Northwest Power (purchases from utilities in the Pacific Northwest).....	0.54
Reid Gardner Unit No. 4 (SWP share under 1979 agreement with Nevada Power Company).....	1.07
Bottle Rock (SWP geothermal plant).....	0.34
Wind (purchase under contract with TERA Power Corporation).....	0.02
DWR-SCE Exchange (net energy gained from Southern California Edison Co. under 1979 DWR-SCE Power and 1981 Capacity Exchange Agreement).....	1.32
Recovery Plants (six aqueduct energy recovery plants - San Luis, Alamo, Devil Canyon, Warner, Castaic, and San Luis Obispo).....	2.32
TOTAL RESOURCES TO MEET SWP ENERGY REQUIREMENTS (as shown in Figure 11).....	8.74
"Return Energy" from Southern California Edison Co. under 1979 DWR-SCE Power Contract and 1981 Capacity Exchange Agreement.....	2.42
TOTAL RESOURCES TO MEET SWP ENERGY REQUIREMENTS AND DWR-SCE CONTRACTUAL OBLIGATIONS (as shown in Figure 11A).....	11.16

FIGURE 12A. SWP PUMPING ENERGY REQUIREMENTS AND RESOURCES

four years. This approach guards against overestimating power resources, since a large portion of SWP resources rely upon hydroelectric generation. Therefore, the resources shown for 1988 indicate a reduction from what had been projected in Bulletin 132-86. All other years assume a statistically medium level of reservoir inflow.

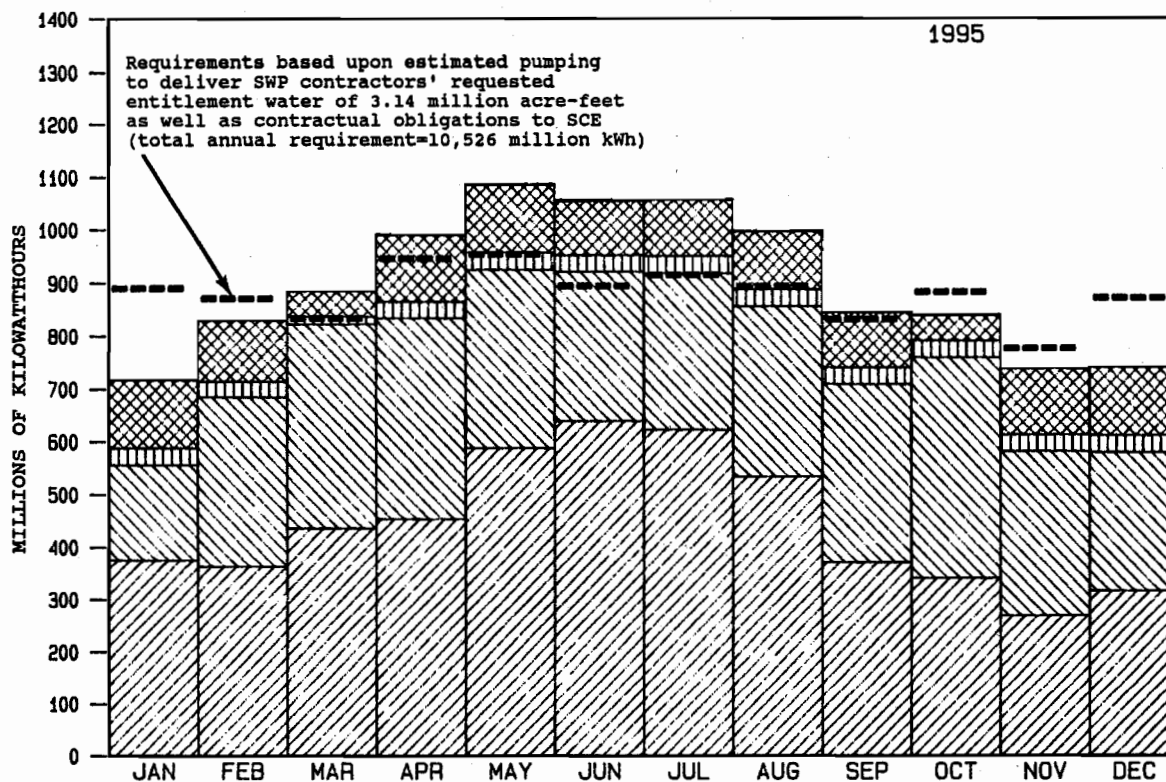

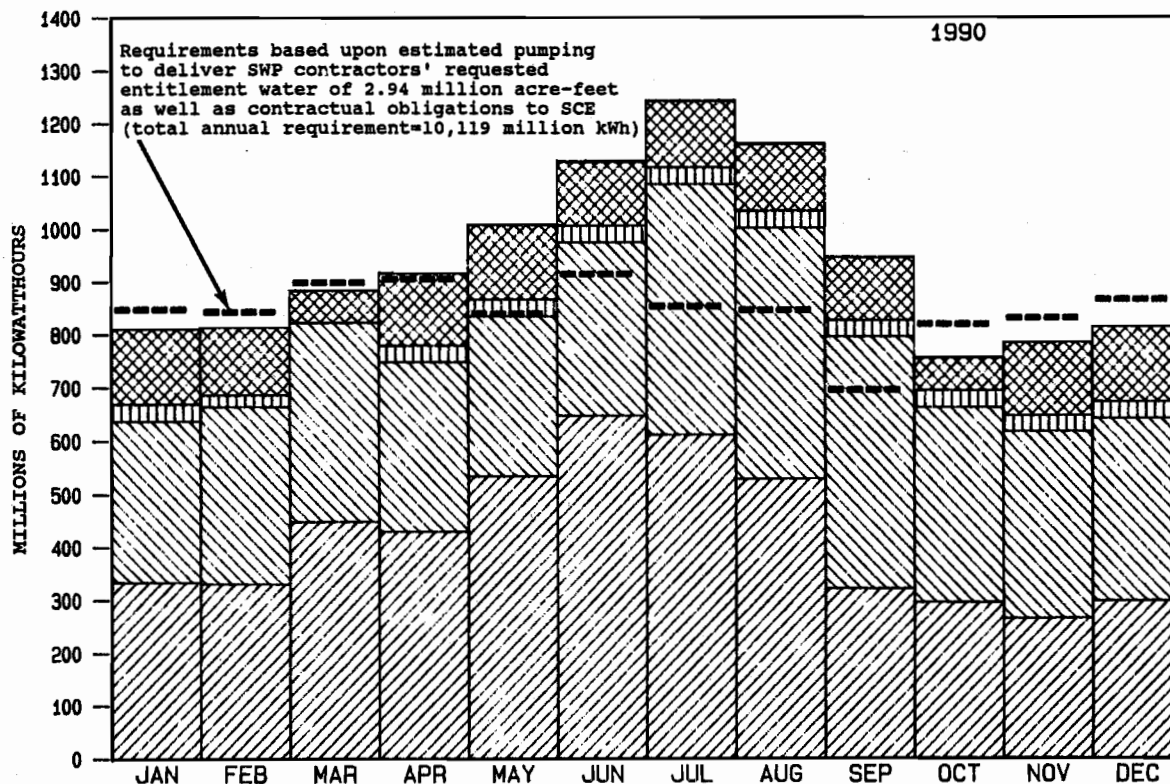

In Figure 12, the SWP pumping energy requirements do not include contractual obligations to SCE. The energy resources include only the net energy gained by the SWP under the exchange arrangements with SCE. In Figure 12A, the SWP pumping energy requirements do include contractual obligations to SCE (as shown in Table 15) and the energy resources include all energy delivered by SCE to the SWP.

Figure 13 compares SWP monthly energy requirements and resources for 1990, 1995, 2000, and 2004. (The year 2004 is the last year for some of the

major power contracts such as the SCE Power Contract and Capacity Exchange Agreement and contracts with PGandE.) As in Figure 12A, the energy requirements shown in Figure 13 include those for both SWP water service and contractual obligations. The resources include all energy received from the SCE exchange. Apparent energy surpluses and deficits occur in some months because energy requirements and resources are balanced annually. Load management techniques or energy exchanges with utilities will be used to balance monthly requirements and resources.

Figure 14 compares SWP on-peak and off-peak monthly capacity requirements and resources for 1990 and 2000. As in Table 16, both the on-peak and off-peak capacity requirements in Figure 14 include (1) transmission losses equal to five percent of the on-peak/off-peak pumping requirement; (2) a

SWP CAPACITY LOADS AND RESOURCES

LEGEND

HYDRO

Hyatt-Thermalito, Aqueduct Recovery Plants, Pine Flat, MWDSC Hydro, Thermalito Diversion Dam, and Mojave Siphon (beginning 1994)

- Notes:
1. The 350 MW contractual obligation to SCE is included in the load requirement, but it is anticipated that SCE will have little or no demand for this capacity during off-peak periods.
 2. The apparent capacity deficits for the 1990 on-peak periods are misleading because the SWP can load drop to meet a portion of its operating reserves. In addition, load requirements are overstated and available resources are understated (see text for further details).
 3. Placement of resources in figure does not indicate a priority of use or need.

reserve margin allowance equal to 10 percent of pumping requirements plus losses; and (3) allowances for capacity commitments to SCE under the 1979 Power Contract and the 1981 Capacity Exchange Agreement. Thus, the presentation in Figure 14 is similar to that of Figure 12A; the obligations to SCE are included in the total SWP load, and the full capacity furnished by SCE is part of the resources.

The indicated on-peak capacity resources in Figure 14 do not include any on-peak capacity from Reid Gardner Unit No. 4 because the participation agreement allows NPC to interrupt SWP generation at any time—with certain limitations. Nevertheless, during on-peak periods, there is likely to be power available from Reid Gardner Unit No. 4 for SWP use, but some interruptions must be anticipated. The same contractual arrangement exists for interruption of off peak generation from Reid Gardner Unit No. 4. However, off-peak capacity for Reid Gardner Unit No. 4 is shown in Figure 14 because it is unlikely that NPC will use significant off-peak capacity, due to minimum service area load concerns and high contractual penalty costs. The participation agreement with NPC requires advance notice for use of capacity, which will give DWR adequate time to adjust loads and other resources.

In Figure 14, it appears that there are capacity deficits during the on-peak period for 1990. The apparent capacity deficits are misleading, however, because of the following reasons:

- o 235 MW of capacity from Reid Gardner is not included for the on-peak period, there is likely to be power available from Reid Gardner;
- o the 1981 CEA Agreement with SCE requires the SWP to provide SCE with 225 MW of capacity for only a portion of the on-peak period, it is included as a load requirement for the total on-peak period in Figure 14. On-peak pumping loads will typically be the highest primarily just before and just after the off-peak periods and may be considerably less during the hours when the CEA commitment is applicable. In addition, up to 225 MW of return and additional capacity from the CEA Agreement

is a resource during some on peak hours, but it has not been included in Figure 14; and

- o the SWP has the capability to meet a portion of its operating reserves by load dropping at pumping plants.

Power Costs

The current SWP power resources, in addition to the power contracts outlined in Table 17, are able to meet SWP power needs at a relatively economical cost.

Table 18 is a detailed summary of the most recent projections of SWP energy resources and their costs. The top section of the table shows the estimated future energy supply from each resource at intervals from 1990 through 2004. The future energy supplies are based upon median water supply conditions. For 2004, the SWP pumping energy requirements are greater than the available resources. The study assumes the required additional energy will be obtained from an unspecified generic baseload coal plant. As in Figure 12, the SWP pumping energy requirements do not include contractual obligations to SCE, and the energy resources include the net energy gained by the SWP under the exchange arrangements with SCE. The pumping energy requirements include energy and the associated transmission losses for delivery of entitlement water, recreation water, reservoir and aqueduct losses, and replenishment of reservoir storage south of the Delta. The excess of projected resources over requirements is shown as surplus energy available for sale.

The lower section of Table 18 shows current projections of the average unit cost of energy from the various sources. These projections include allowances for future escalation of operation and maintenance costs (at 5 percent per year) and appropriate allowances for escalation of fuel costs.

Most of the differences between the Bulletin 132-87 and Bulletin 132-86 resource costs reflect updated estimates for Project construction, Project financing, fuel, and operation and maintenance costs.

The composite resource costs shown in Table 18 represent the weighted average unit cost of all SWP energy from the listed sources. The unit values of potential sales of surplus SWP energy were estimated by escalating the projected 1987 value of 20 mills per kWh at 5 percent. The net cost of energy for SWP use is the unit cost of the energy actually used for SWP purposes. The unit transmission costs shown were calculated by dividing total annual SWP expendi-

tures for power transmission services by the annual SWP pumping energy requirements.

The effective unit costs shown in Table 18 represent the average costs for energy used to operate the SWP. This does not, however, represent actual energy cost in water contractor bills because of allocation adjustments for costs of Off-Aqueduct power facilities and credits for generation at SWP energy recovery plants.

a) Net energy gained from Southern California Edison Company under 1979 DWR-SCE Power Contract and 1981 Capacity Exchange Agreement.

b) Requirement based upon energy to deliver SWP contractors' requested entitlement water, recreation water, reservoir and aqueduct losses, and replacement of reservoir storage south of Delta; includes transmission losses.

c) Includes allowance for future cost escalation.

CHAPTER VII FUTURE COSTS AND FINANCING

This chapter presents both a summary and a detailed explanation of SWP capital costs and financing, revenues and expenses, and bond activities. The overall summary is in Table 19; more detailed presentations of financial matters are shown in additional tables, figures, and line item descriptions throughout the chapter.

Capital costs and financing have been changed from those in Bulletin 132-86 to reflect changes in construction scheduling and cost estimates. Projected bond activities have also been revised to reflect these changes.

The following major SWP facilities planned for completion by 1993 are included in the financial analysis:

- o North Bay Aqueduct – Phase II;
- o Suisun Marsh Facilities (first stage of final facilities);
- o final four units at Banks Delta Pumping Plant;
- o Mojave Siphon power generation facilities;
- o enlargement of the East Branch of the California Aqueduct; and
- o Coastal Aqueduct – Phase II.

The financial analysis shown in Table 19 excludes the costs and financing of facilities to develop the remaining 2 million-plus acre-feet of yield to meet the total contractual commitment to all long-term SWP water contractors.

The financial analysis also excludes costs of associated works that, although essential for realizing full SWP benefits, are financed and constructed by local interests or State agencies other than DWR. These

works include onshore recreation developments at SWP facilities and local distribution facilities.

The financial analysis demonstrates that projected contractor payments and other revenues will be adequate to pay annual OMP&R costs and to meet all repayment obligations on funds used to finance SWP construction and other authorized costs during the period 1987 through 1995. The current analysis indicates that future capital requirements through 1995 for power and water facilities and the Davis-Grunsky Act Program, along with special requirements for revenue bond financing, will be \$1,160 million.

Future Conditions

Future conditions may require changes in the financial analysis. For this reason, basic assumptions are reviewed and the financial analysis is updated annually. Notable contingencies that could change the financial analysis are:

- o deviation from the assumptions regarding SWP power resources;
- o deviation of actual rates of future construction-price escalation from those currently assumed for cost estimates;
- o rescheduling of currently planned construction for future facilities;
- o development of additional sources of water not foreseen at this time;
- o capital costs associated with the Kern Water Bank;
- o capital costs associated with construction of additional conservation facilities;
- o construction of Buttes Reservoir for Antelope Valley-East Kern Water Agency;
- o enlargement of the San Luis Canal;

- o changes in SWP contractors' entitlements due to changes in water needs, water conservation, or reclamation;
- o inability of DWR to market sufficient revenue bonds;
- o changes in economic conditions, including interest rates;
- o adverse impacts upon water contractors, resulting from water shortages due to insufficient supplies (see Chapter V);
- o conditions that would change the abilities of SWP contractors to pay SWP costs; and
- o the outcome of certain lawsuits now pending before the courts (see Chapter III).

Financial Analysis

The current SWP financial analysis in Table 19 is in two parts. Actual and projected capital expenditures and sources of financing are shown on the left hand page. The right-hand page shows actual and anticipated revenues and their application to pay SWP operating expenses and principal and interest on bonds, as well as provide a limited amount of construction funding.

Estimates of future capital expenditures include allowances for escalation of construction costs and land acquisition costs at 3 percent per year for 1987 and 1988 and at 5 percent per year thereafter. State salaries are assumed to escalate at 5 percent per year. Capital expenditures for the SWP also include requirements other than those for construction, such as disbursements under the Davis-Grunsky Act Program (Line 14), and special capital requirements under revenue bond financing (Line 15).

Capital Requirements

Lines 1-18 in Table 19 show actual and projected SWP capital requirements through the year 1995.

Table 20 shows actual and projected SWP construction expenditures, together with a preliminary alloca-

tion of such expenditures among SWP purposes. A generalized construction schedule for current and future contracts is shown in Figure 15.

The following sections describe DWR's current assumptions concerning the costs of each facility of the future construction program through 1995, as shown in Table 19. Decisions to commence construction on facilities not yet under way will be made only after an examination of alternatives and upon completion of final EIRs and other review processes.

Line 1: Initial Project Facilities

Facilities included in the initial construction program are those completed before 1974 (see Bulletin 132-74, Chapter II). Additional costs after 1973 and estimated costs of remaining work on the initial SWP facilities are not included in this line.

Line 2: North Bay Aqueduct-Phase II

Phase II of the North Bay Aqueduct, which will connect with existing Phase I facilities, will consist of pipelines, pumping plants, and a small reservoir necessary to divert water from the western Delta to Napa and Solano Counties for urban use.

Included in the future costs are costs for increased capacity for the City of Vallejo and to provide excess peaking capacity to meet possible future peak summer demands. These additional costs are to be funded by advance payments from the Solano County Flood Control and Water Conservation District. These advance payments are included in Line 34.

Line 3: Delta and Suisun Marsh Facilities

The history column (1952-1986) of Line 3 includes costs for general Delta facilities and planning costs associated with the previously-planned Peripheral Canal and overland water delivery facilities for the western Delta. Included for Suisun Marsh are historic planning costs as well as construction costs through 1986.

The columns for 1987-1995 show Delta facilities planning costs and costs for construction of Suisun Marsh

TABLE 20. SWP CAPITAL EXPENDITURES

(in thousands of dollars)

Facilities and Construction Divisions	Expenditures Incurred through 1986	Future Expenditures	Total	Preliminary Allocation Among Project Purposes			
				Water Supply and Power Generation	Flood Control(a)	Recreation and Fish and Wildlife Enhancement	Other(b)

OTHER CAPITAL REQUIREMENTS							
Davis-Grunsky Act Program	117,457	12,543	130,000	0	0	0	130,000
TOTAL CAPITAL EXPENDITURES	3,417,359	955,343	4,372,702	3,910,760	78,145	196,824	250,858

a) Reflects DWR'S allocation to this purpose, irrespective of federal payments.

b) Includes costs currently unassigned to purpose, planning costs of deleted features of project facilities, initial costs of inventoried items, joint costs assigned to the Federal Government, and costs assigned to the Davis-Grunsky Act Program

c) Includes planning and preoperating expenses allocated to conservation facilities.

facilities. The construction costs are for only a portion of the final Suisun Marsh facilities: the Suisun Marsh Salinity Control Gates and an access road. Present plans are to evaluate the effectiveness of the control structure before proceeding with any additional facilities at Suisun Marsh.

Line 4: Final Four Units at Banks Delta Pumping Plant

The final four 1,067-cfs units are scheduled to be operational in 1991. The final EIR has been completed and distributed to the public and interested parties.

Line 5: Coastal Branch Aqueduct-Phase II

This line shows the planning costs for the Coastal Branch-Phase II. Future expenditures also include a projection of construction costs for this project.

1/ Construction suspended. Completion date pending procurement of a firm steam supply.

Line 6: West Branch Aqueduct

The costs shown in Line 6 are for all facilities on the West Branch except Warne Powerplant. Warne Powerplant costs are included in Line 9. Included in this line are projected costs for the Vista Del Lago Visitors Center and Gorman Creek channel modifications.

Line 7: East Branch Aqueduct-Enlargement

Line 7 shows expenditures for first-stage construction of the East Branch Enlargement, including the enlargement share of power plant costs. (The remaining power plant costs are included in Line 9.) Estimated costs by facility are:

	\$ millions
Aqueduct	74.9
Pearblossom Pumping Plant	81.2
Alamo Powerplant	21.4
Mojave Siphon Powerplant	25.4
Devil Canyon Powerplant	135.0
Total	337.9

All costs in this line are allocated to and repaid by the seven Southern California contractors participating in the East Branch Enlargement.

Line 8: East Branch Aqueduct-Non-Enlargement

The costs shown in Line 8 are for all aqueduct costs on the East Branch that are not allocated to the enlargement project. This includes improvements constructed concurrently with the enlargement work. This line also includes \$8.2 million for the estimated cost of the Devil Canyon Bypass. No costs for power plant construction are included in this line.

Line 9: Power Generation and Transmission Facilities

Estimated capital costs for facilities included in Line 9

are as follows:

	\$ millions
Powerplants	
Reid Gardner, Unit 4	255.7
Bottle Rock	105.8
South Geysers	57.8 ¹
Devil Canyon	37.3 ²
William E. Warne	79.5
Alamo	44.0 ²
Mojave Siphon	22.4 ²
Thermalito Diversion Dam	13.5
Subtotal	616.0
Transmission Lines	
Midway-Wheeler Ridge	10.9
Geysers-Lakeville	6.9
Total	633.8

¹Expenditures to complete work in progress only; remaining work has been deferred (see Ch. IV).

²Does not include East Branch Enlargement share of costs.

Line 10: Additional Conservation Facilities

The costs shown in Line 10 are for planning of additional conservation facilities. No costs are shown in the financial analysis for construction of additional conservation facilities.

Line 11: San Joaquin Drainage Facilities

Included are the projected costs of (1) monitoring and reporting the quality and quantity of agricultural waste waters in the San Joaquin Valley, (2) closing the desalting plant at the Los Banos Demonstration Desalting Facility and writing the final report, and (3) continued operation of the solar pond system. Desalting Facility operation and maintenance costs are shown through mid-1990. These costs are to be financed by California Water Fund appropriations. Costs beyond 1990 in Line 11 are for the waste water monitoring program and continued operation of the solar pond system. No costs shown in this line are charged to SWP water contractors.

Line 12: Other Costs

These expenditures cover such items as general design and construction costs, completion of operation and maintenance facilities, and other completion activities for the initial facilities of the California Aqueduct. Portions of these costs will ultimately be allocated to Aqueduct units described in the preceding paragraphs.

Line 12 includes expenditures that cover completion of monitoring and control systems and other completion activities for SWP facilities other than the California Aqueduct. This line also includes past planning costs for Abbey Bridge and Dixie Refuge Dams and reservoirs in the Upper Feather River area; DWR continues to assume that these facilities will be postponed until there is local support and demonstrated need for them.

Line 13: Total Project Construction Expenditures

This line is the total of Lines 1 through 12.

Line 14: Davis-Grunsky Act Program Costs

This financial assistance program for water developments constructed by local public agencies is discussed in more detail in Chapter III. As of December 31, 1986, DWR had disbursed \$118 million (including \$8.2 million for administration) in grants and loans for 114 local agencies throughout the State. DWR projects that funds presently authorized for the program will be disbursed prior to 1991.

Line 15: Special Capital Requirements under Revenue Bond Financing

This line shows the special capital requirements at the time revenue bonds are sold. The financial analysis assumes that proceeds from future revenue bonds will pay for bond discount, bond issuance costs, debt service reserve requirements, and the financing charges paid on funds borrowed prior to the bond sale and used to finance construction costs.

Application of proceeds to these special requirements for actual and assumed revenue bond sales is shown in Table 21.

Line 16: Total Capital Requirements

This line is the total of Lines 13, 14, and 15.

Line 17: Power Facilities Capital Requirements

This line is the total of capital requirements for power facilities contained in Lines 1-12, and that part of Line 15 associated with power revenue bonds.

Line 18: Water Facilities Capital Requirements

This line is the total of capital requirements for water facilities contained in Lines 1-12, and that part of Line 15 associated with water revenue bonds.

Financing of Capital Requirements

Three general types of financing have been used for the SWP:

- o Burns-Porter Financing, derived from the sale of California Water Resources Development Bonds (general obligation bonds) and the State's Tideland Oil revenues deposited in the California Water Fund as authorized by the Burns-Porter Act (California Water Code Sections 12930-12944), approved by the electorate in November 1960.
- o Revenue Bond Financing, derived from the sale of revenue bonds as authorized by the Central Valley Project Act (California Water Code Sections 11100-11925). DWR's authority to issue revenue bonds was confirmed by a decision of the California Supreme Court in 1963, (*Warne v. Harkness*, 60 Cal. 2d 579).
- o Capital Resources Financing (previously called Miscellaneous Receipts), derived from payments and appropriations (including a portion of Tideland Oil revenues) as authorized by a variety of special contracts, cost-sharing agreements, and legislative actions concerning the SWP, plus accrued interest on these funds.

To date, general obligation bonds have financed the largest segment of the SWP construction. The Burns-Porter Act authorized an issue of \$1.75 billion of general obligation bonds of the State, which are repaid by revenues received under the water supply contracts. This bond issue authorization includes a reservation of \$130 million specifically for the Davis-Grunsky Act Program. Proceeds from the sale of general obligation bonds are deposited in the California Water Resources Development Bond Fund-Bond Proceeds Account, from which monies may be expended only for the construction of SWP facilities and for the Davis-Grunsky Act program.

TABLE 21. APPLICATION OF REVENUE BOND PROCEEDS

(in millions of dollars)

Bond Series	Application of Revenue Bond Proceeds						
	Construction Expenditures	Other Capital Requirements					Total Principal Amount of Bonds
		Reimbursement of General Fund	Bond Interest thru One Year following Completion of Construction	Operating Costs for One Year following Completion of Construction	Bond Discount and Financing Costs	Subtotal	
Oroville (Actual)	218.0	2.6	19.9	1.5	3.0	27.0	245.0
Devil Canyon-Castaic (Actual)	126.4	0.0	10.0	0.7	2.1	12.8	139.2
Pyramid Series A (Actual)	74.0	0.0	19.2	1.0	1.6	21.8	95.8
Reid Gardner Series B (Actual)	146.1	0.0	41.9	0.0	12.0	53.9	200.0
Reid Gardner Series C (Actual)	91.1	0.0	17.9	7.9	8.1	33.9	125.0
Small Hydro-South Geysers Series D (Actual)	49.6	0.0	19.9	0.0	5.5	25.4	75.0
Bottle Rock Series E (Actual)	96.9	0.0	22.0	3.7	2.4	28.1	125.0
Alamo-South Geysers Series F (Actual)	59.1	0.0	14.2	0.0	1.7	15.9	75.0
Power Facilities Series H (Actual)	22.2	0.0	0.0	0.0	184.5(a)	184.5	206.7
East Branch Enlargement Series A (Actual)	117.3	0.0	13.7(b)	0.0	2.0	15.7	132.0
Water System Facilities Series B (Actual)	97.4	0.0	0.0	0.0	2.6	2.6	100.0
Water System Facilities Series C (Assumed)	0.0	0.0	0.0	0.0	9.0(c)	9.0	9.0
Water System Facilities (Assumed)	326.8	0.0	0.0	0.0	33.2(d)	33.2	360.0
East Branch Enlargement (Assumed)	217.4(e)	0.0	0.0	0.0	22.6(d)	22.6	240.0

a) Total bond discount was \$2.7 million. Remaining amount was used to refund portions of Series C and D bonds.

b) Interest capitalized 1-1/2 years.

c) Includes funds applied to Series B and C debt service reserves.

d) Includes debt service reserves.

e) Includes cost of short term borrowing prior to bond issue.

Monies deposited in the California Water Fund are appropriated for purposes of the Burns-Porter Act. Such deposits are derived from a portion of the State's Tideland Oil revenues under a continuing authorization. In the past, the Legislature has acted both to decrease and increase the level of deposits to the fund.

As of June 30, 1987, DWR has sold \$1.8 billion of revenue bonds. This includes \$132 million of Water System Revenue Bonds, Series A, sold July 15, 1986, and \$100 million of Water System Revenue Bonds, Series B, sold May 5, 1987. The Series A bond sale was the first sale of water system revenue bonds (all prior revenue bonds were for power facilities). The proceeds of the Series A sale are used solely for the East Branch Enlargement project. Proceeds from the Series B sale were used for reimbursement of other SWP funds used for ongoing SWP construction.

Additional issues of revenue bonds are planned to fund future SWP construction. Proceeds from the sale of revenue bonds are deposited in the Central Valley Water Project Construction Fund, from which money is expended only for purposes specified in the resolution authorizing each bond sale. These purposes, in addition to construction, planning, and right of way costs, may include (1) funding the Debt Service Reserve Account and (2) payment of interest on bonds and water system operating expenses during the period specified by the resolution authorizing the bond issue.

Capital Resources revenues are deposited in the Central Valley Water Project Construction Fund and may be expended for (1) general obligation bond interest, and (2) construction of SWP facilities. Under DWR's financial management, the capital resources revenues are first used to the extent needed for cov-

erage of any general obligation bond debt service that exceeds available revenues.

The financing of capital expenditures is described in Lines 19 through 33.

Line 19: Power Bonds through Reid Gardner-- Series G

This line shows the proceeds applied from power revenue bonds for the Oroville, Devil Canyon, Castaic, Pyramid, Reid Gardner, Bottle Rock, Alamo, South Geysers, and Small Hydro Projects.

Line 20: Power Revenue Bond--Series H

On June 10, 1986, DWR sold \$206.7 million of power revenue bonds for refunding portions of Series C and D power revenue bonds and to provide \$22.2 million of additional monies for power facilities capital costs. The additional monies provided (1) \$5.0 million for reimbursement of other SWP funds used to complete construction of the Pyramid Hydroelectric Project, (2) \$1.7 million for a portion of the remaining construction costs of the Alamo Project, and (3) \$15.5 million for construction costs of additional capital improvements at the Reid Gardner Project. The remaining additional money was used for other requirements as shown in Line 15.

Line 21: Subtotal Power Revenue Bonds

This line is the total of Lines 19 and 20.

Line 22: East Branch Enlargement--Series A

On July 15, 1986, DWR sold \$132 million of Water System Revenue Bonds, Series A, to finance a portion of the East Branch Enlargement Project. The proceeds provide (1) \$18.0 million for reimbursement of other SWP funds used for construction expenditures prior to the sale of bonds, (2) \$91.4 million for ongoing construction work, and (3) \$4.6 million for other requirements as shown in Line 15.

Line 23: East Branch Enlargement--Future

Future water revenue bonds are needed to provide \$240 million for completion of the East Branch En-

largement Project--First Stage and for special capital requirements (discount and finance costs of bonds, debt service reserves, and interest on construction funds borrowed prior to the sale of bonds).

Line 24: Water System Facilities-- Series B

On May 5, 1987, DWR sold \$100 million of Water System Revenue Bonds, Series B, to provide \$97.4 million for reimbursement of other SWP funds expended prior to the sale for ongoing construction of SWP facilities. The remaining \$2.6 million was used for other requirements as shown in Line 15.

Line 25: Water System Facilities--Future

Future water revenue bonds are needed to provide \$369 million for construction of SWP water system facilities and for special capital requirements (discount and finance cost of bonds and debt service reserves).

Line 26: Subtotal Water Revenue Bonds

This line is the total of Lines 22-25.

Line 27: Initial Project Facilities Bond Proceeds

This line includes financing of initial SWP facilities and planning costs for certain additional conservation facilities. Financing of initial facilities from general obligation bonds was completed in mid-1972, and amounted to \$1.444 billion--i.e., the total of \$1.75 billion Burns-Porter Act authorization, less \$130 million reserved for the Davis-Grunsky Act Program, and \$176 million "offset" for additional conservation facilities. The Burns-Porter Act provides that to the extent California Water Fund monies are expended, an equal amount of general obligation bonds are reserved ("offset") for financing the construction of additional conservation facilities in certain watersheds.

In mid-1972, the reservation of "offset" bonds was effectively limited to \$176 million -- the total amount of California Water Fund monies that had been expended up to that time. By mid-1972, all general obligation bonds authorized by the Burns-Porter Act had been "offset", reserved for the Davis-Grunsky Act Program, or used for SWP construction.

Approximately \$8.5 million of the "offset" bonds have been used to finance planning studies of the Middle Fork Eel River Development (Line 10). This analysis does not use any "offset" bond proceeds to meet capital requirements. If at some time the State constructs an additional conservation facility as specified in Water Code Section 12938, the remaining "offset" bonds could be sold.

Line 28: Davis-Grunsky Act Program Bond Proceeds

For simplification, the entire \$130 million of capital expenditures authorized for the Davis-Grunsky Act Program under the Burns-Porter Act are shown to be funded solely by proceeds from the sale of general obligation bonds. In fact, \$28.0 million from the California Water Fund was used for the program in lieu of bond proceeds prior to 1969. The date of sale for the remaining \$12.5 million in authorized Davis-Grunsky bonds is uncertain. A State Pooled Money Investment loan of approximately \$2 million is being used to finance current expenditures. This short-term loan will be repaid with proceeds from the sale of bonds.

Line 29: Application of California Water Fund Monies (Tideland Oil Revenues)

The Burns-Porter Act provides that any available money in the California Water Fund shall be used for construction in lieu of proceeds from the sale of general obligation bonds. When the Burns-Porter Act became effective in late 1960, approximately \$97 million had been accumulated in the fund. This balance and continuing annual appropriations to the fund through June 18, 1968, financed a total of \$176 million of Project construction costs.

On June 28, 1968, SB 261 became effective (California Statutes of 1968, Chapter 411), which transferred the remaining balance of the California Water Fund to the Central Valley Water Project Construction Fund and deferred accruals to the California Water Fund until July 1, 1972. Since the latter date, appropriations from Tideland Oil revenues have been deposited in the California Water Fund in annual amounts of

\$25 million through Fiscal Year 1980-81 and in the following amounts thereafter:

1981-82	\$27,789,800
1982-83	\$14,710,000
1983-84	None
1984-85	\$25,000,000
1985-86	\$22,533,000 ¹
1986-87	\$2,449,000 ²
1987-88	\$1,261,000 ³

¹ Plus \$2,467,000 for non-SWP purposes.

² All for non-SWP purposes.

³ Plus \$2,379,000 for non-SWP purposes.

The financial analysis assumes that appropriations of Tidelands Oil revenues will be made as needed to fund future costs of the Los Banos Demonstration Desalting Facility and the San Joaquin drainage monitoring program (see Line 11).

Line 30: Application of Capital Resources Revenues to Construction

This line shows the application of Capital Resources revenues for capital expenditures (see description for Line 34).

Line 31: Revenue Transfers Applied

This line shows monies that are assumed to be transferred to the California Water Fund pursuant to provisions of the Burns-Porter Act (see Lines 68 and 69), and subsequently reappropriated to construction.

Line 32: Subtotal Other Capital Financing

This line is the total of Lines 27-31.

Line 33: Total Financing of Capital Requirements

This line is the total of Lines 21, 26, and 32. 2

Project Revenues

SWP revenues, consisting primarily of SWP contractor payments, are deposited in two funds: the Central Valley Water Project Revenue Fund, in which are placed all revenues pledged to revenue bonds, and the California Water Resources Development Bond Fund-Systems Revenue Account, in which all other SWP operating revenues are placed, including interest earnings on any unexpended proceeds from the sale of general obligation bonds. Use of these funds

**TABLE 22. REVENUE BOND PROCEEDS AFFECTING THE
PROJECT INTEREST RATE**

(in millions of dollars)

PROJECT	REVENUE BOND PROCEEDS					
	APPLIED TO CONSTRUCTION COSTS	LESS PORTION OF PROCEEDS DERIVED FROM INTEREST EARNINGS PRIOR TO DELIVERY OF BONDS	PLUS BOND DISCOUNT AND FINANCING COSTS	SUBTOTAL, PROCEEDS INCLUDED IN CALCULATING THE PROJECT INTEREST RATE	PRINCIPAL AMOUNT OF BONDS	PERCENT TOTAL PRINCIPAL AMOUNT INCLUDED IN CAL- CULATING THE PROJECT INTEREST RATE

OF SERIES D BONDS (\$35.1 MILLION) PLUS DEPOSITS TO CONSTRUCTION ACCOUNT (\$0.3 MILLION).

is limited to operating costs and debt service, except that revenues in excess of such costs can be transferred to the California Water Fund.

investment earnings on unexpended revenue bond proceeds.

Line 34: Capital Resources Revenues

Sources of these revenues are (1) federal payments for SWP capital expenditures, (2) appropriations for capital cost allocated to recreation, (3) appropriations for SWP capital expenditures prior to the Burns-Porter Act and under SB 261, (4) Los Angeles Department of Water and Power payments for Castaic power development, (5) water contractor advances for construction of requested works, (6) investment earnings on the Capital Resources Account, and (7)

Historically, appropriations for capital costs allocated to recreation and fish and wildlife enhancement have amounted to \$5 million per year, appropriated by the Legislature from Tideland Oil revenues. No appropriations were received in the 1987-88 fiscal year. Because of the uncertainties over future legislative action no appropriations are shown for 1987 through 1995. DWR is considering an offset between the amount owed to the SWP by the State for costs allocated to recreation and the amount the SWP owes the California Water Fund.

Lines 35-40: Water Contractor Payments

These lines show the separate elements of water contractor payments. The payments identified in Lines 35-40 are described in detail in Appendix B, with supplemental discussion in the following paragraphs. Line 37 also includes revenues sufficient to cover costs associated with sales of excess power.

OMP&R costs are repaid under the Transportation Charge as they are incurred and therefore do not include any interest charges. Construction costs under the Transportation Charge and all construction and annual OMP&R cost under the Delta Water Charge are to be repaid with interest at the Project Interest Rate.

The Project Interest Rate is defined in Article 1(r) of the Standard Provisions for Water Supply Contracts as the weighted average of the rates paid on securities issued and loans obtained to finance SWP facilities, excluding Oroville Revenue Bonds. Under original contract provisions, the basis for determining the Project Interest Rate was the weighted average of rates paid on general obligation bond sales only. Under contract amendments executed in 1969, after issuance of Oroville Revenue Bonds, the basis was expanded to include rates on all other securities sold and loans obtained thereafter for financing SWP facilities, including revenue bonds (see Bulletin 132-70, page 28).

However, not all proceeds from the sale of revenue bonds are melded into the calculation of the Project Interest Rate. Only those proceeds applied to construction costs (the only application of general obligation bonds permitted by law) and those consumed by the bond discount (a component of the total interest cost of a revenue bond issue) are included in the calculation. The Project Interest Rate calculation does not include proceeds from the sale of power revenue bonds for Off-Aqueduct power facilities, revenue bonds for the East Branch Enlargement, or Water System Revenue Bonds covered under the recently negotiated Water Revenue Bond Amendment.

Table 23 presents information basic to the calculation of the Project Interest Rate. The discussion of contractors' water charges in Appendix B is based upon presently known conditions and supports DWR's determination of 1988 water charges, which were billed July 1, 1987. However, the following are significant differences between the sum of future charges shown in Line 41 and the substantiation of 1988 charges discussed in Appendix B.

- o Future capital costs discussed in Appendix B are based upon prices prevailing on December 31, 1986. Those shown in the financial analysis include allowances for price escalation.
- o Pre-1987 charges discussed in Appendix B represent what the charges should have been under presently known conditions. Pre-1987 charges shown in Table 19 are those actually paid under previously determined bills.
- o Charges discussed in Appendix B are unadjusted for past over- or underpayments. Table 19 charges for 1987 and thereafter include adjustments for any apparent over- or underpayments of pre-1987 charges.
- o The charges discussed in Appendix B for East Branch Enlargement costs include the debt service and 25 percent for Series A bonds only. Table 19 charges also include the debt service and cover for assumed future bonds.
- o The water bond surcharge discussed in Appendix B covers the recently issued Series B bonds only. Table 19 surcharge values cover Series B and the assumed future issues required to finance SWP construction.

Line 41: Subtotal Water Contractor Payments

This line is the total of Lines 35-40.

Line 42: Revenue Bond Cover Adjustments

This line shows the credit to contractors resulting from the cover of 25 percent of one year's debt service for Off-Aqueduct power facility bonds and Water System Revenue Bonds. Cover is collected as re-

TABLE 23.

\$100,000,000 Series B Water System Revenue Bonds	5/5/87	2,664,012	194,817	7.313	-
Total		99,218,992	5,918,443		
"Project Interest Rate" Portion		63,621,853	2,998,367	4.713	

- a) A unit equivalent to one dollar of principal amount outstanding for one year.
b) The total interest cost (without regard to premiums received) divided by the total dollar-years, expressed as a percent.
c) Determined by dividing cumulative interest costs by cumulative dollar-years, expressed as a percent. Excluding Oroville Division, Power Revenue Bonds for Off-Aqueduct Facilities, and Water System Revenue Bonds, which do not affect the "Project Interest Rate."
d) These revenue bonds and revenue bond anticipation notes were sold at the following net interests costs and the indicated amounts (representing the sum of proceeds used for construction and the bond discount) were used in the calculations of the Project Interest Rate:

Devil Canyon-Castaic Revenue Bonds:	5.446%	\$126,893,000
Pyramid Hydroelectric Revenue Bonds:	7.680%	\$ 75,586,000
Alamo Bond Anticipation Notes:	10.036%	\$ 18,034,000
Small Hydro Project I, Series D Revenue Bonds:	10.275%	\$ 28,012,000
Alamo Project, Series F Revenue Bonds:	8.525%	\$ 40,114,000
Power Facilities, Series H Revenue Bonds:	7.926%	\$ 42,340,000

quired by the bond resolutions to provide security to the bondholders.

For Off-Aqueduct facilities, this amount is charged annually to contractors and collected through the minimum OMP&R component of the Transportation

Charge. For the East Branch Enlargement facilities, the cover is collected through the capital component of the East Branch Enlargement Transportation Charge. For Water System Facilities, this amount is collected through the water bond surcharge. If not needed to meet annual bond service, the cover is

credited back to the contractors in the following year. The amount varies in proportion to the debt service for these facilities.

Line 43: Federal Payments for Project Operating Costs

Under the December 31, 1961, agreement between the State and the United States, DWR operates and maintains the San Luis Joint-Use Facilities. Under the January 12, 1972, supplement to the agreement, the USBR paid 45 percent of OM&R costs for these activities. (The percentage does not apply to power costs; the USBR and DWR provide their own power to pump their respective amounts of water through the joint facilities). This percentage is reviewed every five years by the USBR and DWR. For the calendar years 1981-1985, the federal share was 44.47 percent. The most recent review was completed in 1986 and resulted in a federal share of 44.09 percent for the calendar years 1986-1990.

Line 44: Appropriations for Operating Cost Allocated to Recreation

Under the Davis-Dolwig Act, the Legislature declared its intent that, except for funds provided pursuant to AB 12 (1966), DWR's budget shall include appropriations from the General Fund of monies necessary for enhancement of fish and wildlife and for recreation in connection with State water projects. Annual OMP&R costs allocated to recreation and fish and wildlife enhancement are paid by annual General Fund appropriations. For Fiscal Years 1983-84 through 1987-88, no funds were appropriated for this purpose. Because of the uncertainties over future legislative action no appropriations are shown for 1987 through 1995. DWR is considering an offset between the amount owed to the SWP by the State for costs allocated to fish and wildlife enhancement and recreation and the amount the SWP owes the California Water Fund.

Line 45: Local Agency Payments under Davis-Grunsky Loan Repayment Contracts

Over \$47 million of loan funds have been disbursed as of December 31, 1986. Loan repayments received through December 31, 1986 are shown in the history column. The future amounts on Line 45 are based upon the loans currently outstanding. Repayment on any future loans under the Davis-Grunsky Act Program was assumed to be beyond the period covered by the financial analysis.

Line 46: Revenue Bond Proceeds

This line includes bond proceeds that are special reserves under revenue bond financing, described in Line 15. These proceeds are not classified as revenues, but are shown in this line to simplify the financial presentation since they are used for capitalized OMP&R costs, revenue bond service, and debt service reserves.

Line 47: Interest Earnings

This line includes interest earnings on unexpended proceeds from sale of general obligation bonds, interest on operating reserves, and other short-term investment earnings on SWP revenues. Based upon experience to date, interest earnings for 1987 and beyond are estimated at \$5 million per year.

Line 48: Payments under Oroville-Thermalito Power Sale Contract

Prior to April 1, 1983, all of the power generation from Hyatt and Thermalito power plants was sold under a Power Sale Contract dated November 29, 1967, to three electric utilities (Pacific Gas and Electric Company, Southern California Edison Company, and San Diego Gas and Electric Company). The 1952-1986 entry includes final settlement of payments under the contract.

Line 49: Miscellaneous Revenues

This line shows all other operating revenues not included in Lines 35-48.

Line 50: Subtotal Other Revenues

This is the total of Lines 43-49.

Line 51: Total Operating Revenues

This is the total of Lines 41, 42, and 50.

Line 52: Total Operating Revenues and Capital Resources Revenues

This is the total of Lines 34 and 51.

Project Expenses

Project expenses include operation, maintenance, and power (OM&P) costs, deposits to replacement reserves, deposits to special reserves (see Line 55 description), debt service, deposits to operating reserves, repayment of the California Water Fund, and application of Capital Resources Revenues for construction (see Line 30).

Revenue bond proceeds earmarked for both debt service during construction and the first year's operating expenses are deposited in the Central Valley Water Project Construction Fund, and are disbursed in accordance with resolutions authorizing the issuance of such bonds. Water contractor revenues associated with power facility operating costs and debt service are deposited in the Central Valley Water Project Revenue Fund for appropriate disbursement. All other operating revenues, deposited in the California Water Revenue Fund Systems Revenue Account, are disbursed in accordance with the following priorities of use as specified in the Burns-Porter Act:

- o first, SWP operation, maintenance, power, and replacement costs;
- o second, general obligation bond debt service;
- o third, repayment of expenditures from the California Water Fund; and
- o fourth, deposits to a reserve for future SWP construction.

Line 53: Project Operation, Maintenance, and Power Costs

Historical and projected OM&P costs are presented in Table 24 by project facility, by composition, and by project purpose. Line 53 shows the OM&P portion of

the Table 24 costs. Table 24 and Line 53 also include the operation and maintenance costs for the federal share of joint facilities and those OM&P costs allocated to recreation, which are intended to be offset by revenues shown in Lines 43 and 44, respectively. Allowances for cost escalation are included in OM&P costs through 1989. Allowances for further future long-term price escalation are not included in these estimates since changes in OM&P costs do not substantially affect the overall results of the financial analysis. (For the most part, changes in OM&P costs cause direct offsetting changes in operating revenues.)

Power cost is the major item of annual operating expense for the SWP, and there have been changes in the assumptions regarding future power sources and costs (see Chapter VI). Line 53 also includes costs associated with power transactions that result in the sale of power not required for the delivery of water.

Line 54: Deposits to Replacement Reserves

This line includes funds set aside as required by contract for replacement of existing SWP facilities. As of December 31, 1986, \$9.7 million had been spent for replacement costs; the balance of the replacement reserve as of this date was \$86.5 million. Replacement reserve amounts are also shown in Table 24.

Line 55: Deposits to Special Reserves under Revenue Bond Financing

Line 55 includes two major components: special reserves deposits, and the amount of capital resources revenue carry-over from prior years needed for construction in the current year.

Special reserves deposits are the net of several income and expenditure items. The income items are deposits for power revenue bonds as follows:

- o proceeds set aside to pay bond interest through one year following construction (capitalized interest);
- o proceeds set aside for the first year of operating costs (capitalized O&M);

- o water contractor payments or bond proceeds set aside for debt service reserves;
- o water contractor payments for power revenue bond cover requirements; and
- o water contractor payments deposited in the surplus account.

The history entry for Line 55 includes deposits to special reserves for all past bond sales shown in Table 21. For future power revenue and water revenue bonds, deposits to special reserves are included in the year of assumed sale. The history amount also includes advances to DWR's revolving fund for working funds to purchase mobile equipment and to meet day-to-day operating expenses.

The expenditure items are:

- o total capitalized interest paid out;
- o total capitalized O&M paid out;
- o debt service cover payments returned to water contractors;
- o debt service reserve payments returned to water contractors; and
- o surplus account funds returned to water contractors or applied to meet expenses.

Special reserves are reduced over time as reserved amounts are used for their respective purposes. The amount shown each year in Line 55 indicates the change from the previous year. A negative number means a withdrawal of special reserves to meet expenses, while a positive number represents a deposit.

Lines 56-57: Payment of Service on Bonds Sold through June 30, 1987

These two lines show the total principal and interest payments on bonds sold to date. Table 25 summarizes payments on general obligation bonds (Series A through V), power revenue bonds by project, and water system revenue bonds.

The last bonds sold were the Series B Water System Revenue Bonds in May 1987. Proceeds from the Series B bonds were used for reimbursement of other SWP funds used for construction of Water System Projects prior to the delivery of the Series B bonds.

Since 1978, the trustee has been retiring Oroville Revenue Bonds prior to the fixed maturity date as follows:

<u>Year</u>	<u>Bonds Retired.\$</u>	<u>Cost.\$</u>
1978	4,045,000	3,845,099
1979	9,730,000	8,933,093
1980	1,350,000	1,227,600
1981	2,865,000	1,805,862
1982	15,890,000	9,623,312
1983	18,865,000	16,776,000
1984	7,640,000	6,807,020
1985	10,215,000	9,044,000
1986	7,175,000	6,598,000

The schedule for service of Oroville Revenue Bonds shown in Table 25 is based upon a revised bond maturity schedule that reflects these early bond retirements.

Line 57 also includes over \$0.3 million in interest payments to the General Fund for the temporary loan of \$46.8 million in 1970. This loan was repaid by proceeds from the sale of Series N Water Bond Anticipation Notes.

These lines show the projected annual service for future water revenue bonds shown on Line 23 for the East Branch Enlargement Project. Assumptions concerning the service on these future bonds are as follows:

- o the interest costs for the water revenue bonds are estimated to average 7.5 percent; and
- o the bonds are to be repaid within 30 years of sale with maturities commencing in the year following the date of sale and with equal annual bond service for the principal repayment period.

Lines 60-61: Payments on Projected Future Water System Revenue Bonds:

These lines show the projected annual service for future water revenue bonds shown on Line 25 for Water System Facilities. Assumptions concerning the service on these future bonds are the same as those described for Lines 58-59 above.

b) Serial maturities or mandatory requirements for term bonds.

c) Includes capitalized interest payment.

Lines 62-63: Total Payments of Bond Service

This is the total of interest payments shown on Lines 57, 59, and 61 and the total of principal payments shown on Lines 56, 58, and 60, respectively.

Line 64: Subtotal Debt Service

This is the total of Lines 62 and 63.

Line 65: California Water Fund Appropriation to Non-SWP Purposes

In 1982 and 1983, DWR transferred \$70 million to the California Water Fund as repayment of Tideland Oil revenues advanced in prior years for construction of SWP facilities. The Legislature subsequently appropriated all of these funds to the State's General Fund.

Line 66: Total Operating Expenses and Debt Service

This is the total of Lines 53, 54, 55, 64, and 65.

Line 67: Deposits to Operating Reserves Added

DWR policy for proper fiscal management of the SWP and protection of the interests of bondholders is to maintain reserves of \$48 million for payment of operation and maintenance costs, and debt service. The financial analysis indicates that the maximum reserve amount will have been reached by the beginning of 1988. Entries in this line are annual deposits or expenditures into or out of the reserve.

Line 68: California Water Fund Repayment Required for Current Construction

The Burns-Porter Act requires that, after operation, maintenance, replacement, and bond service requirements have been satisfied, SWP revenues shall be transferred to the California Water Fund to reimburse the fund for monies expended for construction of the State Water Resources Development System. For the financial analysis, repayment amounts through 1995 shown in Line 68 are required for financing capital expenditures.

Line 69: California Water Fund Repayment Available for Future Construction

Line 69 shows that some revenues in excess of expenses are available, beyond present construction requirements, to repay the California Water Fund. These funds would be available to fund a portion of future SWP facilities, and/or be credited as repayment against past California Water Fund expenditures (see Line 65). The amount shown could be transferred to Line 68 if additional facilities are scheduled for construction which would require funding.

Line 70: Capital Resources Revenues Used for Construction

This line is the same as Line 30.

Line 71: Total Project Expenses

This is equal to the sum of Lines 66 through 70.

Future Costs of Water Service

Estimates of future water costs are useful to SWP contractors in short- and long-range planning of their water needs, operations, and budgets.

Unit water charges displayed in Table 26 represent future costs of water by SWP service area. The Table 26 unit rates include capital, transportation, and operating costs of existing and future SWP facilities accounted for in Table 19. The unit charges also assume that in 1990 and 2000 the SWP will be able to deliver full contractor requests for water.

The unit water charges shown in Table 26 are shown both as unescalated 1987 dollars, and escalated rates reflecting assumed future inflation. DWR estimates of future capital expenditures include allowances for escalation of construction costs at 3 percent per year through 1988 and at 5 percent per year thereafter. The escalated unit rates for future power sources reflect escalation varying from 3 percent to 7 percent, depending upon the source of energy.

TABLE 26.
ESTIMATED FUTURE UNIT WATER CHARGES

Total	236	241	224	299

- a) These estimated unit water charges differ from those in Table 27 of Bulletin 132-86 due to a number of factors, primarily (1) changes in projected water deliveries in some service areas, (2) increased OM&R costs projected for future years, and (3) changes in projected power costs, and (4) the addition of the Coastal SWP Service Area.
- b) These values reflect the effects of assumed future cost escalation.
- c) Operation, maintenance, and replacement.
- d) No power costs are incurred for water delivery to Feather River area contractors.
- e) Power costs of Transportation facilities to deliver SWP water to the service area, including costs of Off-Aqueduct power facilities.

CHAPTER VIII

PROFILES OF SWP CONTRACTORS

Of the 30 long-term contractors for SWP water supplies, 24 have been described in previous bulletins. This bulletin presents profiles of the six remaining contractors.

The first series of profiles, in Bulletin 132-83, featured Antelope Valley-East Kern Water Agency, Desert Water Agency, Devil's Den Water District, Oak Flat Water District, Plumas County Flood Control and Water Conservation District, and Santa Clara Valley Water District.

Featured in Bulletin 132-84 were Alameda County Water District, Kern County Water District, Napa County Flood Control and Water Conservation District, Solano County Flood Control and Water Conservation District, The Metropolitan Water District of Southern California, and Tulare Lake Basin Water Storage District.

Bulletin 132-85 presented profiles of Alameda County Flood Control and Water Conservation District, Zone 7, Castaic Lake Water Agency, Coachella Valley Water District, Crestline-Lake Arrowhead Water Agency, Dudley Ridge Water District, and San Bernardino Valley Municipal Water District.

Bulletin 132-86 included profiles of Butte County, Kings County, Empire West Side Irrigation District, Little Rock Creek Irrigation District, Palmdale Irrigation District, and San Gabriel Valley Municipal Water District.

Profiles of the City of Yuba City, Mojave Water Agency, San Geronimo Pass Water Agency, San Luis Obispo County Flood Control and Water Conservation District, Santa Barbara County Flood Control and Water Conservation District, and Ventura County Flood Control District are in this bulletin.

These six agencies exemplify California's diverse topography. One agency is in the northern section of the Central Valley's agricultural area, two are in the State's desert area, two are in the central coastal

area, and one is situated along the south coast. The total area of all six agencies equals approximately 34 percent of the total SWP service area, but their combined population accounts for only about 7 percent of the population served by the Project.

Although sparsely populated, all agencies are experiencing urban growth. All have SWP municipal and industrial use water contracts. Mojave Water Agency and the City of Yuba City are the only two of the six to take delivery of any SWP water.

City of Yuba City

Yuba City is a 12-square mile community and urban center for more than 40,000 people in the northern Central Valley. It is Sutter County's largest population center and serves as the county seat. Yuba City also serves as the trade center for about 160,000 people in Butte, Colusa, Sutter, and Yuba counties. The Sutter Buttes are located a few miles northwest of the City and Sacramento is just 40 miles south. State Routes 20 and 99 provide access east-west and north-south, respectively.

Terrain in and around Yuba City is generally flat, with elevations varying only slightly from 46 to 60 feet above sea level. Summers in Yuba City are hot and dry, and winters are moist and mild. The wettest months are from November through April, when most of the average annual rainfall of 19 inches occurs. Tule fog forms in December through February and the area is frost free about 280 days of the year. Yuba City's eastern border runs along the Feather River; the Yuba River is the other principal river in the area.

Yuba City's economic base has changed from its predominant agricultural foundation. Major employment and industry earnings in the area now center around government, services, retail trade, and manufacturing. Beale Air Force Base in neighboring Yuba County is a major factor in Yuba City's econ-

omy; and more than 1,000 businesses prosper in the urban area. Agriculture continues to be an integral economic factor. Orchards and fields of crops surround Yuba City.

Like many communities in Northern California, Yuba City got its start in the Gold Rush. Established near the confluence of the the Feather and Yuba rivers, Yuba City became a trade center for the mining industry. After the boom, the City grew slowly, eventually incorporating in 1908. The first surge in population came during the post-World War II housing boom. The area has grown at a healthy rate during subsequent development. Yuba City has suffered and overcome several disasters. Probably the most devastating disaster was the 1955-56 flood, in which the Yuba and Feather rivers combined flows exceeded 300,000 cfs, breached a levee, and inundated most of the area.

Despite the proximity of two rivers, Yuba City until recently obtained its urban water from wells, but the water quality was poor. Tests showed either unacceptable levels of hydrogen sulfide, or excessive amounts of iron and manganese in the well water. A water treatment plant using flocculation, settling, and dual media filtration was completed in 1969, and

Yuba City now receives high quality treated water from the Feather River.

In 1961, Yuba City and DWR executed an agreement specifying that the City would not divert stored water released from Oroville Reservoir except under terms of a valid water supply contract with the State. Permit No. 14045, issued by the State Water Rights Board, allows Yuba City to directly divert 15.6 cfs from the Feather River for 10 months of the year, excluding July and August. Water during those months is supplied through an agreement with the Yuba County Water Agency.

Yuba City became a SWP contractor in 1963, contracting for a maximum of 9,600 acre-feet of entitlement water. Yuba City took its first SWP water delivery in 1984. Yuba City is authorized to contract for a municipal water supply. The City also has the power to pay for the water supply through property tax.

Mojave Water Agency

The Mojave Water Agency (MWA), in the Mojave Desert portion of San Bernardino County, is north of the San Bernardino National Forest and south of the Fort Irwin Military Reservation. MWA encompasses 3,160,400 acres of mostly arid mountain ranges, de-

This view of the City of Yuba City's new water treatment plant features the plant's flocculation tank and sedimentation tanks

sert valleys, dry lakes, and hills dotted with desert vegetation.

Area climate is characterized by high summer temperatures, low humidity, strong winds, and scant rainfall. Extremes in temperatures are not unusual: summertime temperatures reach well over 100 degrees Fahrenheit and wintertime temperatures often dip below freezing. Average annual rainfall is approximately 5 inches.

Most of the 140,200 residents in MWA's service area live in Barstow, Victorville, Apple Valley, and Hesperia. Other communities include Helendale, Lucerne Valley, Adelanto, Joshua Tree, and Yucca Valley. Community growth potential is favorable because of the climate, availability of land, and proximity to major urban areas. Population growth rates in recent years have been relatively high, ranging from 6 to 9 percent per year in various communities.

The economy is based mainly upon farming, railroad-ing, cement manufacturing, and essential retail and service trades. The economic structure is further strengthened by the three military installations in the area: George Air Force Base near Victorville, the Marine Corps Supply Center near Barstow, and a portion of Edwards Air Force Base.

Since the early 1800s the Mojave Desert region has served as an important passageway between Salt Lake City and southern California. By the late 1800s successful mining operations developed in the Calico Mountains, about 10 miles northeast of Barstow. Gold, silver, borax, and tungsten were mined until the turn of the century. The area is no longer the site of large scale mining, however, large limestone deposits led to an active cement industry near Victorville.

Railroads also played an important role in the area's development. Barstow, Victorville, and Helendale began as railroad communities, and Barstow is still an important service and repair station for the Santa Fe Railroad.

Agriculture is the area's main industry. Alfalfa hay, irrigated pasture land, milo, wheat, cantaloupes, on-

ions, and potatoes are the major crops. Livestock production consists mostly of beef, sheep, hogs, and dairy cattle. All major crops and pasture land require irrigation.

All local water supply needs are met by pumping ground water within each of the various ground water basins. These basins include the Upper, Middle, and Lower Mojave River basins, the Harper Basin, the Coyote Basin, the Caves Canyon Basin, and the Troy Basin. The west fork of the Mojave River and Deep Creek meet to form the Mojave River, which is the chief drainage system for the San Bernardino Mountains' northeastern slopes. The Mojave River provides the only mechanism for ground water recharge within the River Basin. Past and current studies indicate that the Upper, Middle, and Lower basins are being overdrafted in an amount in excess of MWA's maximum entitlement of 50,800 acre-feet per year.

MWA was formed in 1960 by the California Statutes of 1959, Chapter 2146, and is administered by a Board of Directors. The Agency's primary purpose is to contract for SWP water. It is also authorized to develop, protect, and conserve water; acquire water rights for beneficial purposes; and construct, operate, and maintain hydroelectric works.

MWA's Board of Directors are empowered to levy charges for water sold, and against pumping, which together will not be less than the variable costs due under any water supply contract with the State. Property taxes can also be levied for other costs, expenses, and obligations arising under SWP contracts. Other agency powers include land annexation; borrowing money; and issuing notes, as long as it is approved by two-thirds of the Board of Directors.

MWA took its first SWP water delivery in 1972. In 1978, the Agency and DWR entered into a demonstration ground water recharge and withdrawal program, under which water was delivered to the Agency's Mojave River Basin in 1978 via Reach 22B of the California Aqueduct to the Mojave River from Silverwood Lake. Subsequently, 22,500 acre-feet was withdrawn from storage for use in the Agency's service area. The final water was withdrawn in 1982.

San Gorgonio Pass Water Agency

Riverside County's Whitewater-Coachella area contains three SWP water contractors, including the San Gorgonio Pass Water Agency (SGPWA). (The other two contractors are the Desert Water Agency and the Coachella Valley Water District.)

SGPWA is in the mountainous region which divides eastern and western Riverside County. Situated between the San Jacinto and San Bernardino mountains, this area is geographically a transition zone between the county's two halves.

The area encompassed by SGPWA has great potential for growth. The Agency is ideally situated in the mountains, within commuting distance to larger metropolitan areas. Climatic conditions in the area include relatively mild summers, cold winters with frequent frosts, and low humidity.

Population in the Agency's service area is approximately 41,000. The area's population growth has been increased by an influx of retirees and commuters, as well as an increase in local manufacturing jobs. Banning, Beaumont, Cabazon, Calimesa, and Cherry Valley are the major communities in the Agency.

Development in the area began around 1845. The first economic activity in the area was livestock grazing and farming - mostly vegetables, fruit, and grains. Recent urban development is due mainly to an increase in light manufacturing and affordable housing. This trend is likely to continue. The light manufacturing industry produces electronic parts, food products, toys, and apparel.

Agriculture, formerly the dominant industry in the area, has been declining with the growing urbanization. Only about 5 percent of the Agency's area is currently used for agriculture. Peaches, plums, cherries, alfalfa hay, and pasture land are irrigated; grain, mostly barely, is not irrigated. There is also a small livestock industry centering around cattle grazing and poultry production.

SGPWA lies partly in the Upper Santa Ana River drainage system and partly in the San Gorgonio River drainage area, which is tributary to the Whitewater River. Area water supply is completely dependent upon precipitation and runoff into the ground water basins. Runoff from the San Jacinto and San Bernardino mountains supplies most of the water for both the Santa Ana River and Whitewater River drainage systems and ground water basins. There are no surface streams that can be developed and ground water resources are in overdraft condition.

SGPWA was created by Chapter 1435, Statutes of 1961 (Deering's California Water Code, Uncodified Laws, Act 9099 (1962)). The Agency's primary purpose is to contract with the State for supplemental water supplies from the SWP.

SGPWA contracted for a maximum SWP annual water entitlement of 17,300 acre-feet, although the Agency has yet to take any SWP water. The Agency is now developing a plan to meet its future requirements through SWP and local water supplies. In addition, SGPWA and MWDSC negotiated an exchange agreement that gives SGPWA the option of exchanging all or a portion of its SWP entitlement for an equal amount of MWDSC's Colorado River supply.

There are four public water agencies (Beaumont-Cherry Valley Water Irrigation District, City of Banning Water Department, Cabazon County Water District and Yucaipa Valley County Improvement District No. 2) and five private water service agencies within SGPWA, and all will probably be wholesale purchasers of SWP water from the Agency.

SGPWA is administered by a Board of Directors, which is empowered to issue bonds, warrants, and negotiable promissory notes to pay for water service. Voters must approve bond sales. The Board of Directors are able to levy charges for water to cover operating expenses (including SWP capital and OMP&R costs), improvements, and to pay interest and principal on any bonded debt. A mandatory property tax may be assessed if water sale revenues do not equal the money needed to pay either the principal and interest on a bonded debt or the water service contract with the State.

Snowfall along the California Aqueduct

San Luis Obispo County Flood Control and Water Conservation District

San Luis Obispo County Flood Control and Water Conservation District (SLOCFC&WCD) was created in 1945 by the State Legislature. SLOCFC&WCD occupies the 2,131,300 acres of San Luis Obispo County, and the county's Board of Supervisors doubles as the District's Board of Directors. The District's principal responsibilities are to: (1) make water available for irrigation, urban, and other beneficial uses; (2) develop necessary distribution works; (3) control and conserve flood and storm waters and stream flows in reservoirs; and (4) provide ground water replenishment.

San Luis Obispo County is mid-way between San Francisco and Los Angeles, and has 70 miles of Pacific Ocean coastline. Kern County is on the Dis-

trict's eastern border; Monterey County is to the north and Santa Barbara County is to the south. The topography of the District includes coastal plains and both coastal and interior mountains and valleys. Five subranges of the Coastal and Traverse mountains are in SLOCFC&WCD: the Santa Lucia, Temblor, La Panza, Caliente, and San Luis. Overall climate conditions are mild; annual precipitation ranges from 10 inches in the eastern portion to around 40 inches in the higher elevations.

Population in the District is 195,100. Major population centers include Paso Robles, Atascadero, Morro Bay, Los Osos, San Luis Obispo, Grover City, Pismo Beach, and Arroyo Grande.

Major streams include the Nacimiento, Salinas, Cuyama, and Santa Maria rivers, and the San Luis Obispo and Arroyo Grande creeks. Existing District

water supplies include Whale Rock Reservoir, Salinas Reservoir, Lopez Reservoir, ground water, and reclaimed water. The District is also entitled to 17,500 acre-feet of water annually from Nacimiento Reservoir in the northern part of the County, but there are no transportation facilities to deliver the water. Only a small portion of District's entitlement is used for urban development around Nacimiento Lake. The other three reservoirs are used for municipal and industrial purposes. Salinas and Lopez are operated by SLOCFC&WCD; Whale Rock is operated by the Whale Rock Commission.

Agriculture, recreation, and government are the main economic bases in the area. There are several government organizations in the area, most notably the California Polytechnic State University, the Atascadero State Hospital, the California Men's Colony Prison, and Camp San Luis Obispo.

Local water needs are met by the Salinas, Lopez, and Whale Rock reservoirs, from the Los Osos and Paso Robles ground water basins, and the Arroyo Grande Nipomo portion of the Santa Maria ground water basin. The District's water use is greater than current yield, thus causing a ground water overdraft. Although 82 percent of applied water is used for irrigated agriculture, projected future land use patterns indicate an increase in both agricultural and urban land use, but with a shift in water use toward the urbanized areas.

In 1963, the District contracted for SWP entitlement water. Initial entitlement deliveries were to begin in 1980, reaching a maximum delivery of 25,000 acre-feet in 1990 and thereafter. The District has yet to take delivery of any Project water. SLOCFC&WCD, along with Santa Barbara County Flood Control and Water Conservation District (SBCFC&WCD), would receive any Project water through the proposed Coastal Branch of the California Aqueduct. Both agencies have requested several delays from the original construction start date, and both have recently expressed renewed interest in the Coastal Branch construction. (See "Coastal Branch," Chapter III.)

SLOCFC&WCD recently reevaluated its water requirements, partly because of a projected population increase of about 66 percent by 2010. In 1972, SLOCFC&WCD developed a plan to meet the District's water needs, but a change in the County's General Plan and steady population growth warranted a reexamination of that plan.

In 1986, DWR, along with SLOCFC&WCD completed a Master Water Plan Update, concentrating on alternatives for meeting SLOCFC&WCD's future water needs. Most alternatives centered around different sizes of the Coastal Branch aqueduct coupled with various local projects.

In October 1986, the District and SBCFC&WCD requested that DWR prepare an EIR and preliminary design for the Coastal Branch. The study is expected to be completed in 1989.

Santa Barbara County Flood Control and Water Conservation District

The Santa Barbara County Flood Control and Water Conservation District (SBCFC&WCD) encompasses all of Santa Barbara County. San Luis Obispo County is north of the District; Ventura County is to the east, and the Pacific Ocean is to the south and west.

SBCFC&WCD has an area of 1.7 million acres. Major subareas of the District are the South Coast area, which includes the City of Santa Barbara, and the Santa Ynez, Lompoc, Los Alamos, Santa Maria, and Cuyama valleys. Elevations range from sea level to over 6,800 feet. There are three mountain ranges in the District: the Sierra Madre, the San Rafael, and the Santa Ynez. About 43 percent of the District's total gross area is the Los Padres National Forest.

The climate is pleasant and moderate. Only 13 degrees separate the average low temperatures from the average high temperatures. Average annual rainfall is between 12 to 36 inches. Major rivers in the District are the Sisquoc and Cuyama, which merge to form the Santa Maria, and the Santa Ynez. The Santa Maria-Cuyama-Sisquoc, the Santa Ynez, the San Antonio, and South Coast watersheds are the District's main drainage areas.

Approximately 36 percent of privately-owned land in the District is suitable for urban or agricultural development. More than half of the 338,000 residents live in Santa Barbara, Santa Maria, Lompoc, Carpinteria, Solvang, and Guadalupe. Goleta, a large unincorporated area near Santa Barbara, is home to the University of California-Santa Barbara as well as an expanding light manufacturing industry.

Agriculture is the area's single most important industry. The agricultural industry encompasses all categories of farm products including livestock and livestock products, field crops, vegetables, fruits, and nuts. Beef is the most important of the farm products; vegetables and lemons are the most important crops. Much of the agricultural land is irrigated. Nonirrigated acreage has remained relatively stable since the late 1970s. Various small grains and beans are significant crops in the nonirrigated areas.

Other industries include manufacturing, mining, petroleum, tourism, and military and related services. Vandenberg Air Force Base has a major influence on the area's economic development, particularly in the Lompoc and Santa Maria valleys. The Lompoc area also provides about one-third of the world's diatoma-

ceous earth supply. Favorable potential for growth exists in the District, but a determining factor could be an adequate water supply.

Local water supplies are principally from ground water basins. Existing surface developments include the Cachuma and Gibraltar reservoirs, and Jameson Lake. Twitchell Reservoir provides flood storage and conserves water for ground water recharge. Ground water overdraft poses a potential problem for SBCFC&WCD. There are existing ground water quality problems in the Santa Ynez-Lompoc areas. Current annual District demand for water exceeds supplies by more than 65,000 acre-feet, and the deficit is expected to grow.

SBCFC&WCD became a SWP water contractor in 1963. The District has yet to receive any SWP water. SBCFC&WCD would be served by the Coastal Branch of the California Aqueduct. SWP deliveries were initially planned to begin in 1980, reaching their maximum in 1990. Both SBCFC&WCD and San Luis Obispo County Flood Control and Water Conservation District have requested several delays in the construction of the Coastal Branch.

In 1981 the District's maximum annual entitlement of 57,700 acre-feet was reduced to 45,486 acre-feet

East of Buellton, the Santa Ynez River flows toward the city of Santa Barbara, which is on the south side of the Santa Ynez Mountains

of water; as a result, SBCFC&WCD relinquished 17 cfs of Aqueduct capacity. This reduction occurred after a March 1979 election in which Santa Barbara County voters rejected a \$102 million bond issue for construction of distribution facilities for local delivery of SWP water. The District is now considering obtaining part or all of the relinquished entitlement water and Aqueduct capacity.

SBCFC&WCD has 18 subcontractors for its SWP entitlement water. The City of Santa Maria, Southern California Water Company, Casmalia Community Services District, Vandenberg AFB, Park Water Company (serves Vandenberg Village), Mission Hills Community Services District, and the City of Lompoc are interested in receiving water through the Coastal Aqueduct. The other subcontractors wish to receive their entitlement from Cachuma Reservoir, if it is enlarged as a local project of the SWP.

In September 1986, SBCFC&WCD requested DWR to conduct a feasibility study and complete a draft EIR for the Coastal Branch. SBCFC&WCD also requested

DWR to conduct a feasibility study on enlarging Cachuma Reservoir as a local SWP project. DWR agreed and both studies will be completed in 1989.

Ventura County Flood Control District

The Ventura County Flood Control District (VCFCD) was established in 1944 by the Ventura County Flood Control Act. The Board of Supervisors of Ventura County are empowered to act, ex officio, as the Board of Supervisors of the VCFCD. The District's principal powers are to provide for the control of flood and storm water and to obtain, retain, and reclaim water for beneficial uses.

The VCFCD encompasses all of Ventura County (except offshore islands), an area of 1,840 square miles along the Southern California coast between Los Angeles and Santa Barbara counties. The mountainous northern half of the county lies inland within the Los Padres National Forest and includes less than 1 percent of the population. The southern half of the county includes all of the 40-mile coastline and the broad alluvial valleys and coastal plains that support

**Overhead view of spreading grounds of the United Water Conservation District,
a wholesale water retailer in Ventura County**

most of the development. Population in the county totals 615,400.

The District's climate is characterized by mild winters with modest precipitation and warm, dry summers. Average annual rainfall on the coastal plain generally ranges from about 14 to 18 inches. Over 30 inches of precipitation occur in some mountain areas. The principal streams along the Ventura County coast are the Ventura River in the north, the Santa Clara River in the central area, and Calleguas Creek in the south.

Approximately 120,000 acres of agricultural land is irrigated in the valley and coastal plain areas of Ventura County. The principal crops are vegetables, citrus fruit, avocados, and strawberries. Agricultural acreage has been gradually decreasing due to urbanization; that trend is expected to continue.

DWR estimates that current total use of applied water in Ventura County is about 440,000 acre-feet per year, about two-thirds for agriculture and one third for municipal and industrial uses. Most of the agricultural use is supplied by ground water, which is pumped at a rate of about 30,000 acre-feet per year, and the remaining needs are met with imported water and ground water overdraft. The safe yield of the ground water basins is exceeded by about 90,000 acre-feet per year; this has led to a need for remedial steps to overcome saltwater intrusion in the upper aquifer near the coast.

Three principal agencies sell wholesale water in Ventura County. Casitas Municipal Water District (Casitas) serves the northern portion of the coastal area with surface water from Lake Casitas (a 254,000 acre-foot USBR reservoir on a tributary of the Ventura River). The United Water Conservation District serves the Oxnard Plain area and the Santa Clara River Valley, by both direct diversion and by ground

water recharge; its facilities include 100,000 acre-foot Lake Piru in the Santa Clara River watershed. Calleguas Municipal Water District is a member agency of MWDSC, serving an area in the southeastern portion of the county that includes a population of about 370,000; imports of MWDSC water have recently ranged from 70,000 to 80,000 acre-feet per year.

Total water demand in Ventura County is projected to remain at about current levels in the future as urban development offsets reduced irrigation use. Planned ground water overdrafting will continue, but will be reduced by a combination of additional local surface water development, expanded waste water reclamation, and increased imports.

VCFCFCD contracted for SWP water in 1964. At that time, it was projected that SWP water deliveries would begin in 1980 and build up to a maximum of 20,000 acre-feet per year in 1990. In 1970, in order to preclude double SWP payments by residents within the service area of Calleguas Municipal Water District, VCFCFCD executed an agreement with Casitas transferring administration of the contract, including all costs and entitlement to the 20,000 acre-feet per year deliveries, to Casitas. With water demands increasing slower than originally projected, deliveries of SWP water have been deferred; to date, no SWP water has been delivered under the VCFCFCD contract (although SWP water reaches the Calleguas Municipal Water District via MWDSC).

Direct deliveries of SWP water are projected to begin in 1991. Casitas, VCFCFCD, and United Water Conservation District are studying alternative methods of importing SWP water. Although the contractual delivery point is Castaic Lake, it would be possible to take deliveries from Pyramid Lake. It is anticipated the studies will be completed in fall 1987.

APPENDIX B

DATA AND COMPUTATIONS USED IN DETERMINING WATER CHARGES FOR 1988

DWR annually furnishes Statements of Charges to the 30 long-term SWP water supply contractors. These statements are described in Article 29(e) of the "Standard Provisions for Water Supply Contract", which provides that:

"...All such statements shall be accompanied by the latest revised copies of the document amendatory to Article 22 and of Tables B, C, D, E, F, and G of this contract, together with such other data and computations used by the State in determining the amounts of the above charges as the State deems appropriate."

To comply with Article 29(e), DWR annually performs a comprehensive review and redetermination of all water supply and financial aspects of the SWP for the entire Project repayment period. This annual redetermination is provided for in Water Contract Article 22(f), concerning the Delta Water Rate per acre-foot of future entitlement, and in Article 28, with regard to the annual Transportation Charges for the entire Project repayment period.

Appendix B documents the redetermination of water charges to be paid by contractors during calendar year 1988 and is based upon established data, both known and projected, about the SWP as of June 30, 1987. The computational procedures and interrelationships between tabulations in this appendix are outlined in Figures B-1 and B-2. All B-tables shown in Figures B-1 and B-2 are included at the end of this text. Appendix B also documents payments by contractors under amended Article 21 of the Standard Provisions for surplus water deliveries from the SWP.

Types of Water Charges

Costs of SWP facilities that are necessary for either the conservation and development of water supply,

or conveyance of such supply to SWP service areas, are included in charges to water contractors. The Standard Provisions classify these facilities as "Project conservation facilities" and "Project transportation facilities." Following is a list of the principal facilities in each classification:

Project Conservation Facilities

- o Frenchman Dam and Lake;
- o Grizzly Valley Dam and Lake Davis;
- o Antelope Dam and Lake;
- o Oroville Dam and Lake Oroville;
- o Oroville Power Facilities;
- o Delta Facilities;
- o Additional Conservation Facilities;
- o A portion of the California Aqueduct from the Delta to Dos Amigos Pumping Plant; and
- o San Luis Dam, Reservoir, and Pumping-Generating Plant.

Project Transportation Facilities

- o Grizzly Valley Pipeline;
- o North Bay Aqueduct;
- o South Bay Aqueduct (including Del Valle Dam and Lake Del Valle);
- o The remainder of the California Aqueduct from the Delta to Dos Amigos Pumping Plant and all facilities south, including dams and lakes in Southern California; and

**FIGURE B-1. RELATIONSHIPS OF DATA USED TO SUBSTANTIATE
STATEMENTS OF CHARGES**

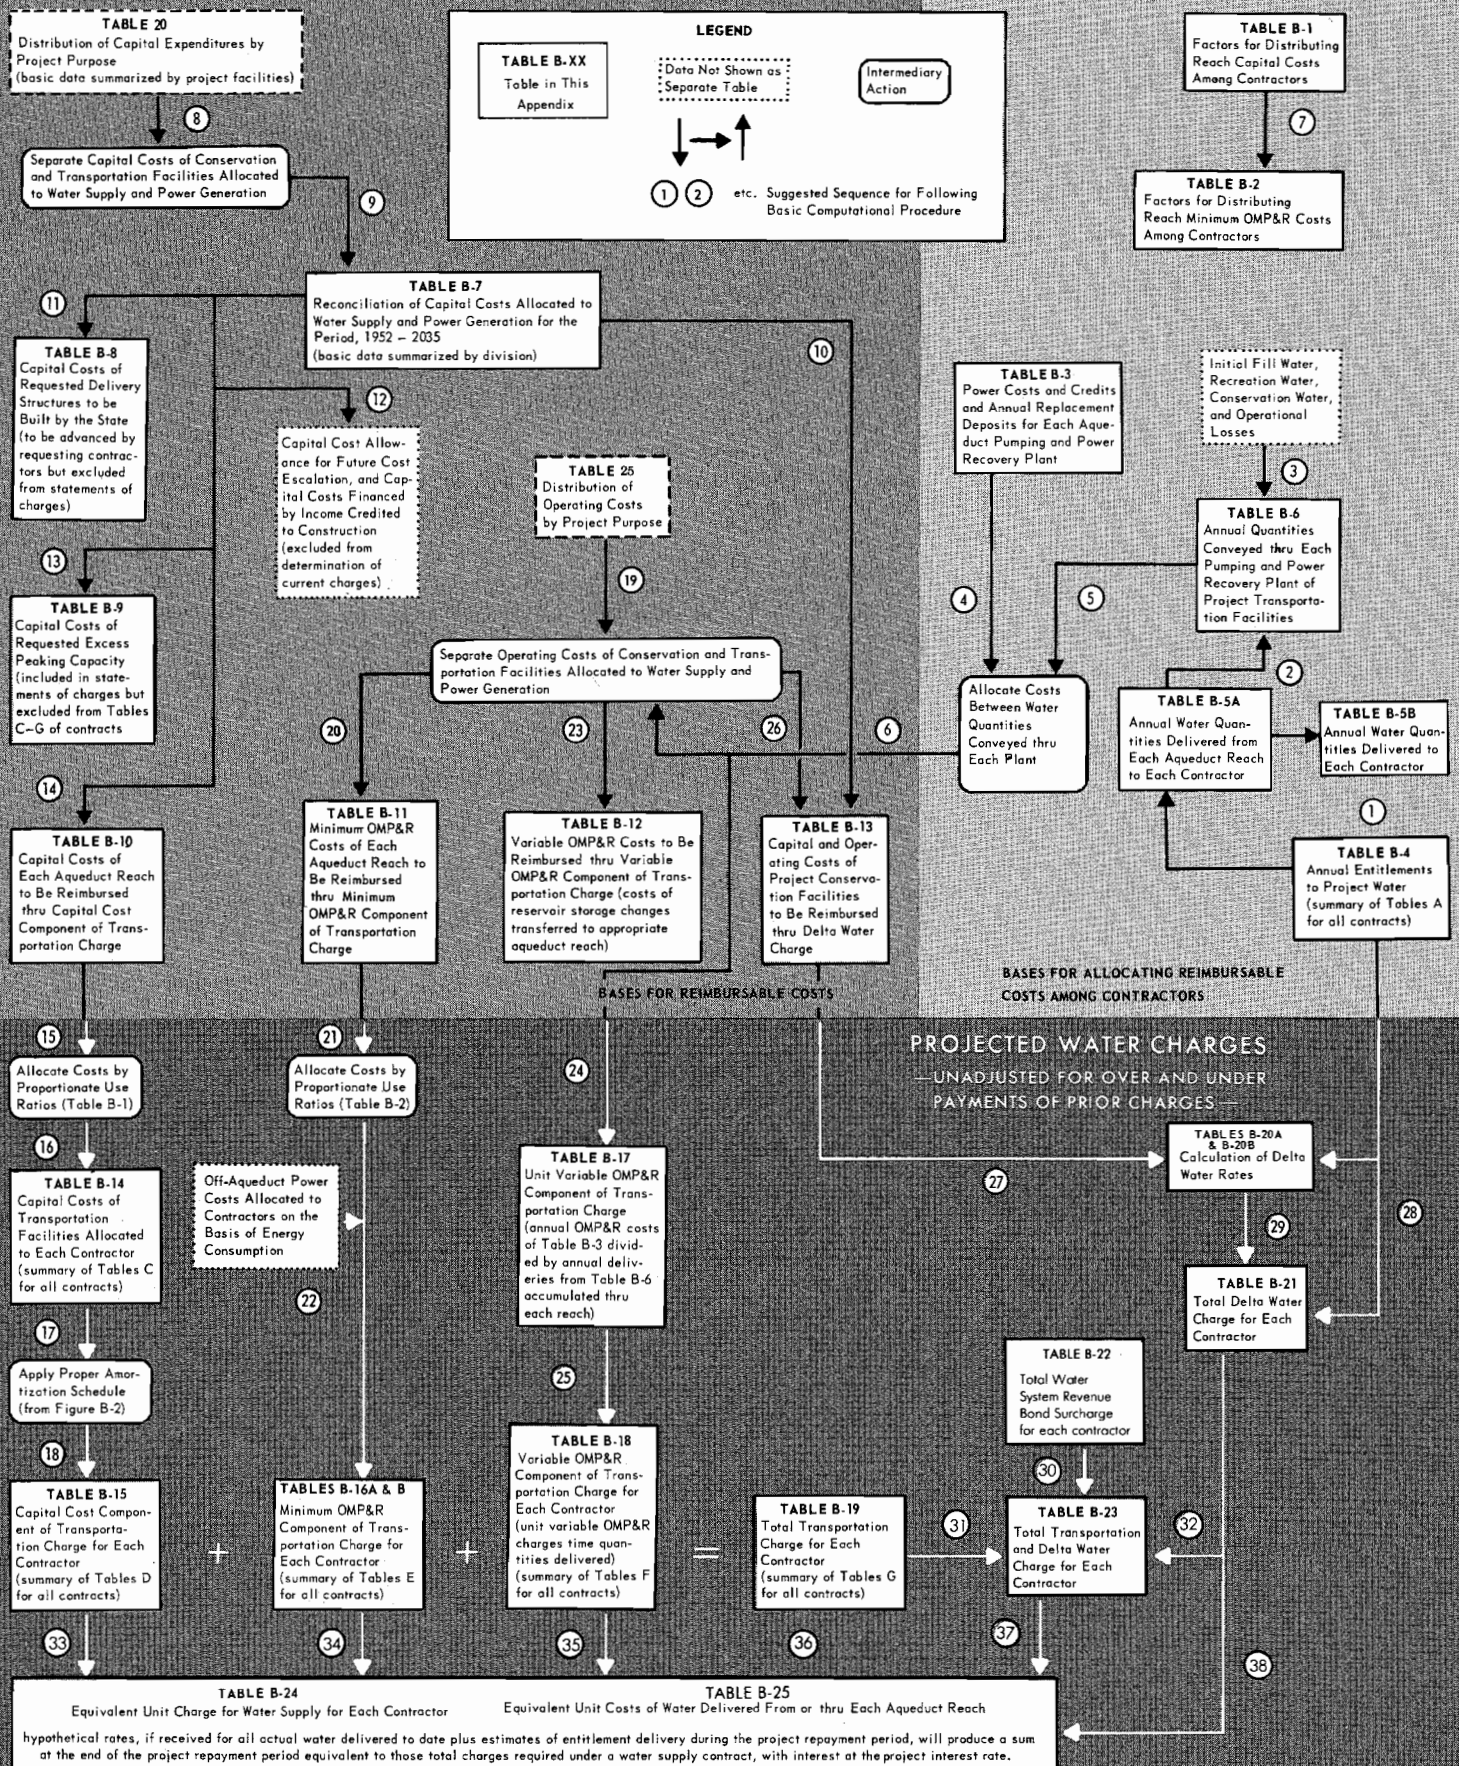

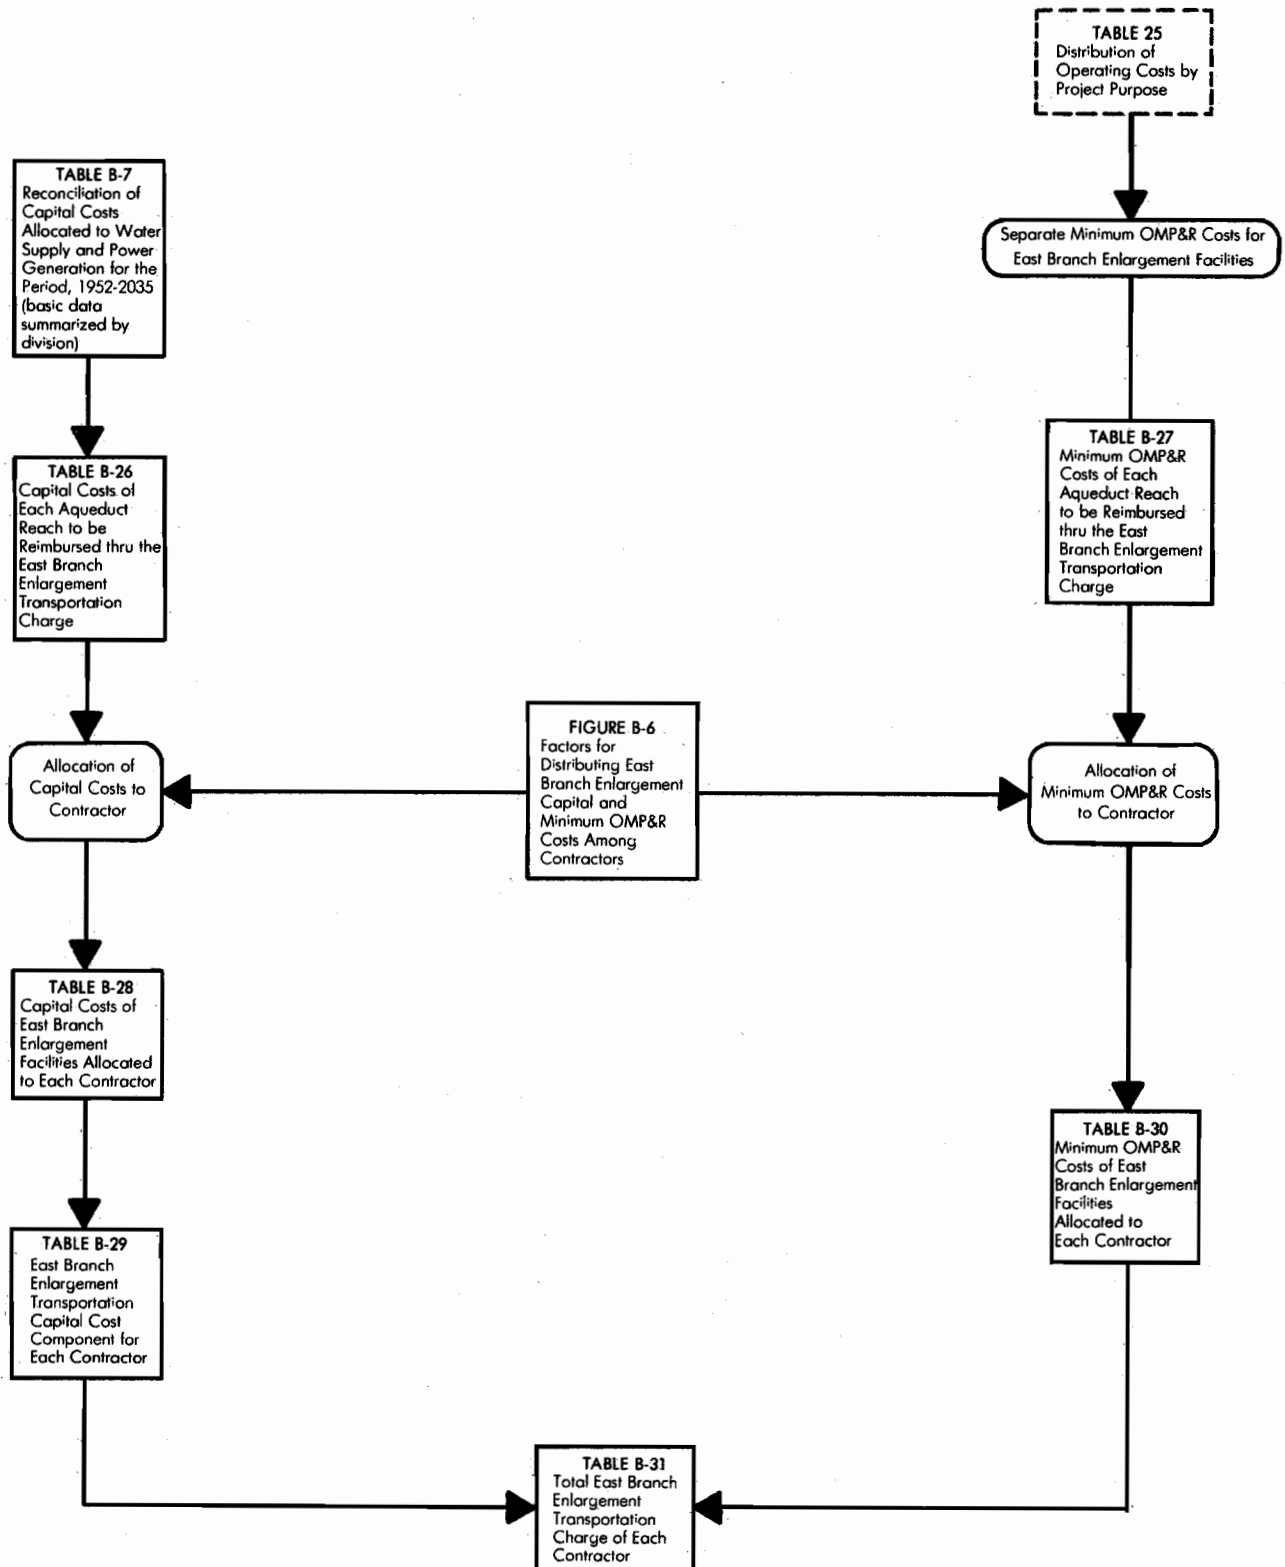

FIGURE B-2. RELATIONSHIPS OF DATA USED TO SUBSTANTIATE EAST BRANCH ENLARGEMENT CHARGES

- o Off-Aqueduct Power Facilities (Reid Gardner Unit No. 4, Bottle Rock Powerplant, and South Geysers Powerplant).

The Standard Provisions provide for two basic annual charges for Project water:

- o the Delta Water Charge, which will be paid by all contractors and which will return all reimbursable costs of the Project conservation facilities to the State; and
- o the Transportation Charge, in addition to the Delta Water Charge, which will be paid by those contractors served by the Project transportation facilities and which will return all reimbursable costs of such facilities to the State.

The Delta Water Charge is a unit charge applied to each acre-foot of SWP water the contractors are entitled to receive under their contracts. The unit charge, if applied to each acre-foot of all such entitlements for the remainder of the Project repayment period, will repay all outstanding reimbursable costs of the Project conservation facilities, with appropriate interest, by the end of the repayment period (2035).

The Transportation Charge is a charge for use of facilities to transport water to the vicinity of each contractor's turnout. Generally, the annual charge represents each contractor's proportionate share of the reimbursable capital costs and operating costs of Project transportation facilities. Each contractor's allocated share of these reimbursable capital costs is amortized for repayment to the State and certain variations are allowed in the amortization methods. The contractors' shares of reimbursable operating costs are repaid essentially in the year such costs are incurred by the State.

The East Branch Enlargement Transportation Charge will be paid by seven Southern California contractors participating in the enlargement. San Bernardino Valley Municipal Water District elected to advance funds to pay the District's allocated East Branch Enlargement capital costs. The remaining contractors

will pay an allocated share of the debt service on the revenue bonds sold to finance the enlargement. Each contractor also will pay an allocated share of the minimum OMP&R costs of the East Branch Enlargement.

Composition and Timing of Water Charges

As detailed in Figure B-3, the Delta Water Charge and the Transportation Charge consist of the following components:

- o Conservation and Transportation capital cost components, which will return to the State all reimbursable capital costs;
- o Conservation and Transportation minimum OMP&R components, which will return to the State all reimbursable operating costs that do not depend upon quantities of water actually delivered to the contractors; and
- o A Transportation variable OMP&R component, which will return to the State all reimbursable operating costs that depend upon, and vary with, quantities of water actually delivered to the contractors.

Article 28 of the Standard Provisions of the water supply contracts provides that Transportation Charges be redetermined each year. The tables in Appendix B present the numerical data used in this redetermination. Transportation Charges for prior years through 1986 shown in these tables do not equal those amounts actually paid by contractors. As provided under the Water System Revenue Bond Amendment to the water supply contract, differences between actual payments and amounts computed in this redetermination are accumulated with interest and amortized during the remaining years of the contract repayment period. All adjustment computations are shown in the attachments accompanying each contractor's Statement of Charges and are reflected in revised copies of Tables C through G of the contract, also furnished to each long-term water supply contractor in the annual Statement of Charges.

FIGURE B-3. COMPOSITION OF DELTA WATER CHARGE AND TRANSPORTATION CHARGE

DELTA WATER CHARGE	CAPITAL COST COMPONENT	<ol style="list-style-type: none"> 1. Planning, design, right of way, and construction costs of conservation facilities 2. O&M costs for newly constructed conservation facilities prior to initial operation 3. Activation costs for newly constructed conservation facilities 4. Replacement deposits for SWP control centers (portion) 7. Off-Aqueduct power facility costs - bond service, bond cover costs (25% of bond service), bond reserves, transmission costs to provide service to "backbone," fuel costs, taxes, and O&M - less power sales allocated to Off-Aqueduct power facilities 8. Program costs (portion) to offset annual fish losses resulting from pumping at Banks Delta Pumping Plant (DWR-DFG Agreement)
	VARIABLE O&P&R COMPONENT	<ol style="list-style-type: none"> 1. Power purchase costs <ol style="list-style-type: none"> a. Capacity b. Energy c. Pine Flat bond service, O&M, and transmission costs allocated to aqueduct pumping plants 2. Alamo, Devil Canyon, Warner, and Castaic power generation credited at the power plant reach and charged to aqueduct pumping plants 3. Hyatt-Thermalito and Thermalito Diversion Dam Powerplant generation charged to aqueduct pumping plants (credits for this generation are reflected in the Delta Water Rate) 4. Replacement deposits for equipment at pumping plants and power plants 5. Credits from sale of excess SWP system power 6. Program costs (portion) to offset annual fish losses resulting from pumping at Banks Delta Pumping Plant (DWR-DFG Agreement)

a) Excluding costs recovered under the East Branch Enlargement Transportation Charge.

The formula for computing the Delta Water Rate, Article 22 (f) of the Standard Provisions, provides that all adjustments for prior overpayments or underpayments of the Delta Water Charge are accounted for in a redetermination of the rate. Since the redetermined rate applies to all future entitlements, such adjustments are amortized during the remainder of the Project repayment period. This Appendix B includes a redetermination of the Delta Water Rate for 1988.

These redeterminations exclude charges associated with water service other than the Delta Water Charge and the Transportation Charge. These excluded charges (and the manner in which such excluded charges are treated herein) are:

- o Advances of funds pursuant to Article 24(d) of the Standard Provisions, for excess capacity constructed by the State at the request of contractors; and
- o Advances of funds pursuant to Article 10(d) of the Standard Provisions, for delivery structures (turnouts) constructed by the State at the request of contractors. Partial information is included in this appendix concerning actual and projected capital costs of such delivery structures. Statements concerning these costs and data are furnished to the appropriate contractors at various times and are not part of the annual statements.
- o Payments for sale and service of surplus water to entities other than contractors, pursuant to Article 21 of the Standard Provisions are also excluded. These payments are generally based upon the unit rates shown in Table B-25. Net revenues resulting from "noncontractor" service are applied as described in Bulletin 132-71, page 24.
- o Payments under the Devil Canyon-Castaic Contract for costs of the Devil Canyon and Castaic facilities allocable to power generation. Charges under the contract are billed separately from those under the Water Supply Contract. The

treatment of such charges in relation to redetermined Transportation Charges is shown in special attachments to the bills of the six participating contractors.

The time and method of payment for corresponding components of the Delta Water Charge and the Transportation Charge are as follows:

- o The capital cost components of the Delta Water Charge and the Transportation Charge are paid in two semiannual installments, due January 1 and July 1 of each year, on the basis of statements furnished by the State about July 1 of the preceding year.
- o The minimum OMP&R components of the Delta Water Charge and the Transportation Charge are paid in 12 equal installments, due the first of each month, on the basis of statements furnished by the State about July 1 of the preceding year.
- o The variable OMP&R component of the Transportation Charge is paid in varying monthly amounts, due the 15th of the second month following actual water delivery. The charges are projected based upon a unit charge per acre-foot established about July 1 of the preceding year. These unit charges may be revised several times during the year to reflect current power costs and revenues. These unit charges are applied to actual monthly delivery quantities as determined by the State on or before the 15th of the month following actual delivery.

Bases for Allocating Reimbursable Costs Among Contractors

This section discusses DWR's procedures (diagrammed in the upper right portion of Figure B-1) for allocating reimbursable costs of Project transportation facilities among contractors. These costs do not include annual costs of Off Aqueduct power facilities, which are discussed in the "Project Water Charges" section.

Capital and Minimum OMP&R Costs

Figure B-7, following the text in this appendix, shows repayment reaches that are the bases for allocating

reimbursable costs of Project transportation facilities among contractors.

Allocations of reimbursable capital costs and minimum OMP&R costs of each reach are based upon the proportionate maximum use of that reach by respective contractors under planned conditions of full development.

The derivation of ratios that represent the proportionate maximum use of each aqueduct reach by the respective contractors was described in Bulletin 132-70. The Bulletin 132-70 ratios were subsequently revised for (1) the North Bay Aqueduct, (2) the South Bay Aqueduct, (3) the California Aqueduct from the Delta to the Coastal Branch, and (4) the Coastal Branch.

Revised ratios for the first reach of the California Aqueduct and for the South Bay Aqueduct are described in Bulletin 132-72 and reflect certain contract amendments executed early in 1972 regarding South Bay Aqueduct use (Bulletin 132-73, pages 33-35).

Bulletin 132-83 presented revised ratios for reaches in the Coastal Branch and in the California Aqueduct from the Delta to the Coastal Branch. These revisions reflect a contract amendment with Santa Barbara County Flood Control and Water Conservation District that reduced maximum annual entitlement from 57,700 acre-feet to 45,486 acre-feet.

Bulletin 132-86, page 170, presented revised ratios for reaches of the North Bay Aqueduct. These revisions reflect contract amendments executed with Solano County Flood Control and Water Conservation District in 1985 and with Napa County Flood Control and Water Conservation District in 1986.

Table B-1 presents the reach ratios currently applicable to reimbursable capital costs.

Table B-2 presents corresponding ratios for reimbursable minimum OMP&R costs. Requested excess capacity is omitted when deriving ratios in Table B-1 (because the capital costs for the excess capacity are paid on an incremental-cost basis and not a pro-

portionate-use basis) but is accounted for in Table B-2.

Variable OMP&R Costs

Contract Article 26(a) provides that the variable OMP&R component of the Transportation Charge shall return to the State those costs that depend upon and vary with the amount of SWP water delivered. (The minimum OMP&R component returns those operating costs that do not vary with deliveries.) The Article explains that all such costs for a reach for a given year shall be allocated among contractors in proportion to the actual annual use of that reach by the respective contractors.

Table B-3 summarizes total variable OMP&R costs for each SWP pumping and power plant. These variable costs comprise the following:

- o Costs of capacity and energy used, exclusive of associated power transmission and station service charges (transmission and station service costs are classified as minimum OMP&R costs);
- o Credits for capacity and energy produced at aqueduct power recovery plants (treated as negative costs); and
- o Annual payments to sinking fund reserves to finance periodic replacement of major plant machinery components having economic lives shorter than the Project repayment period. Sinking fund payments for 1962 through 1979 were based upon a schedule determined in 1970. Sinking fund payments for 1980 through 2035 are based upon revised replacement schedules. This schedule was updated in 1986. DWR plans to update the replacement deposit schedule at five-year intervals. Current sinking fund payments are substantially greater than those projected in 1970.

Table B-3 excludes plant capacity and energy costs associated with surplus water service after May 1, 1973. Prior to that date, surplus water service was charged the same unit variable OMP&R component as entitlement water service. The rate structure for surplus water service was significantly changed on

May 1, 1973. Since then, capacity and energy costs for pumping surplus water have been allocated directly to those water contractors receiving that water service.

Water Conveyance

Four Appendix B tables present the water conveyance quantities that form the basis of allocation of variable OMP&R costs.

Table B-4 presents the schedules of annual entitlements as set forth in Table A of each water supply contract.

Table B-5A shows actual and projected water quantities delivered from each aqueduct reach to each contractor. Projected deliveries for 1987 through 2035 are based on contractor requests for future water deliveries. The Table B-5A quantities also include non-Project water delivered to contractors and surplus water deliveries prior to May 1, 1973. (For a comparison of historic deliveries to annual entitlements, see Table 3 in Chapter II.)

Table B-5B presents a summary of actual and projected annual water quantities delivered or to be delivered to each contractor.

Table B-6 summarizes the annual water quantities conveyed, or to be conveyed, through each aqueduct pumping plant or power plant for each of the following functions:

- o made available to contractors at down-aqueduct delivery structures ("Deliveries -- Water Supply");
- o required to initially fill down-aqueduct reaches and reservoirs, or for repayment of preconsolidation water used during construction ("Initial Fill Water");
- o delivered to down-aqueduct recreation developments or used for fish and wildlife mitigation or enhancement ("Deliveries -- Recreation");

- o lost through evaporation and seepage from all down-aqueduct reaches ("Operational Losses"); and
- o placed in down-aqueduct reservoir storage after initial filling of the reservoirs ("Reservoir Storage Changes"). With one exception, "Reservoir Storage Changes" also includes SWP water placed into Southern California ground water storage in 1978 through 1982 (as positive amounts), and water withdrawn from storage and delivered to contractors between 1979 and 1982, and in 1987 (as negative amounts). The exception is at Banks Delta Pumping Plant, where the ground water additions and withdrawals are included in "Conservation Water".

In addition, Table B-6 summarizes the following under the heading "Conservation Water" (Column 20):

- o net annual water amounts stored and projected to be stored in San Luis Reservoir; and
- o water lost and projected to be lost through evaporation and seepage from San Luis Reservoir and from the water conservation portion of the California Aqueduct.

San Luis Reservoir is operated to conserve water for future delivery to downstream contractors. To account for costs associated with reservoir storage, those power and replacement costs of the Banks Delta Pumping Plant (a joint transportation-conservation facility) that are allocated to the conveyance of annual "conservation water" quantities, are transferred to the capital costs of San Luis Reservoir (during initial fill) or to the minimum OMP&R costs of San Luis Reservoir (subsequent to initial fill). In years of net storage withdrawal from San Luis Reservoir, a portion of the minimum OMP&R cost of the reservoir is transferred to the variable OMP&R cost of the Banks Delta Pumping Plant. This transfer is equal to the variable OMP&R cost per acre-foot of delivery through the Banks Delta Pumping Plant for that year, multiplied by the acre-feet of deliveries derived from San Luis Reservoir storage for that year.

Bases for Reimbursable Costs

This section describes how the costs allocated by the procedures outlined in the preceding section are derived. The cost derivation process is diagrammed in the upper left quadrant of Figure B-1.

First, the capital and OMP&R costs of all SWP facilities are allocated among the various project purposes according to the allocation percentages in Figure B-4. These percentages are subject to future revision. The redeterminations in this appendix are concerned only with the costs that are allocated to water supply and power generation.

Capital Costs

Capital costs used in the redetermination in this appendix reflect prices prevailing on December 31, 1986; future cost escalation will be reflected in subsequent bulletins.

Table B-7 presents a reconciliation of estimated total capital costs of each Project conservation facility and each Project transportation facility.

Table B-8 shows costs incurred and projected to be incurred by the State in connection with each contractor's turnouts. Costs incurred by the State for both State- and contractor-constructed delivery structures are paid directly by the contractors for which the structures are built. (The State incurs design review and construction inspection costs in connection with contractor constructed turnouts.)

Table B-9 lists costs and payments for excess capacity built into SWP transportation facilities under amendments to contracts with MWDSC, San Gabriel Valley Municipal Water District, and Antelope Valley-East Kern Water Agency as follows:

- o additional costs incurred by the State for requested excess capacity;
- o advances, by water contractors, of funds for such costs; and
- o credits for advances in excess of costs, which were applied to the respective contractors' in-

stallments of the capital cost component of the Transportation Charge in 1981.

Under Amendment 2 of MWDSC's contract, 809 cfs of excess capacity originally was constructed in reaches of the West Branch at MWDSC's request. Under Amendment 7, this capacity was reclassified as basic capacity of the SWP transportation facilities. MWDSC paid \$16.3 million as a prepayment of the capital cost component of the Transportation Charge in lieu of advancing of funds for the originally requested capacity.

Amendment 5 to MWDSC's contract requires that additional costs for modifications to the Santa Ana Valley Pipeline (required for enlargement of Lake Perris) are to be allocated to MWDSC and returned to the State through payments of the Transportation Charge. The additional costs to be repaid through MWDSC's capital cost component for the aqueduct reach from Devil Canyon Powerplant to Barton Road total about \$6.7 million as shown in Bulletin 132-72, page 98.

Table B-10 presents the actual and projected annual capital costs of each aqueduct reach that will eventually be returned to the State, with interest, through contractor payments of the capital cost component under the Transportation Charge and of debt service under the Devil Canyon-Castaic Contract.

Annual Operating Costs

Annual operating costs allocable to water supply and power generation are returned to the State through the minimum and variable OMP&R components of Delta Water and Transportation Charges and through a portion of the revenues from energy sales. All reimbursable operating costs of conservation facilities are included in the minimum OMP&R component of the Delta Water Charge.

Table B-11 lists the actual and projected costs to be reimbursed through payments of (1) the minimum OMP&R component under the Transportation Charge, and (2) allocated operating costs under the Devil Canyon-Castaic Contract. Table B-11 includes the following types of operating costs, which are considered to be incurred in annual amounts

FIGURE B-4. COST ALLOCATION FACTORS

Project Facilities	Water Supply and Power Generation		All Other Purposes (Nonreimbursable)	
	Capital Costs	Minimum OMP&R Costs	Capital Costs	Minimum OMP&R Costs
(in percent)				
Project Conservation Facilities				
Frenchman Dam and Lake	21.5	0	78.5	100.0
Antelope Dam and Lake	0	0	100.0	100.0
Grizzly Valley Dam and Lake Davis	1.0	1.8	99.0	98.2
Oroville Division ^(a)	97.1	99.5	2.9	0.5
California Aqueduct, Delta to Dos Amigos Pumping Plant	96.6	96.7	3.4	3.3
Delta Facilities	86.0	86.0	14.0	14.0
Transportation Facilities				
Grizzly Valley Pipeline	100.0	100.0	0	0
North Bay Aqueduct	100.0	100.0	0	0
South Bay Aqueduct:				
Del Valle Dam and Lake Del Valle	25.2	22.0	74.8 ^(b)	78.0 ^(c)
Remainder of South Bay Aqueduct	100.0	100.0	0	0
California Aqueduct:				
Delta to Dos Amigos Pumping Plant	96.6	96.7	3.4	3.3
Dos Amigos Pumping Plant to terminus excluding Coastal Branch	94.3	96.9	5.7	3.1
Coastal Branch	100.0	100.0	0	0

a) Percentages shown are applicable to the remaining costs of the Division after excluding costs allocated to flood control that are reimbursed by the federal government (22 percent of capital costs) and excluding specific power costs of Edward Hyatt and Thermalito power plants and switch yards.

b) Percentage shown consists of 48.0 percent recreation and 26.8 percent flood control.

c) Percentage shown consists of 44.9 percent recreation and 33.1 percent flood control.

that do not vary with the water quantities delivered to the contractors:

- o all direct labor charges for field operation and maintenance personnel, including associated indirect costs;
- o a distributed share of general operating costs that cannot be identified solely with one facility or aqueduct reach;

o electric power transmission and station service costs allocable to aqueduct pumping and power recovery plants;

o all costs for equipment, materials, and supplies and for replacement of electronic control systems;

o portions of the power and replacement costs of all up-aqueduct pumping and power plants that are allocable to the annual conveyance of water

(1) lost to evaporation and seepage from respective aqueduct reaches, or (2) placed into storage in respective reservoirs of the Project transportation facilities (after initial fill);

- o credits, which offset those costs in (2) above, for deliveries drawn from reservoir storage; and
- o escalation of projected operating costs at 5 percent per year through 1989.

Table B-12 shows the portions of the variable OMP&R costs in Table B-3 that are allocable to the water supply delivery quantities shown in Table B-6 and reimbursed through payments of the variable OMP&R component of the Transportation Charge. The following adjustments are made to the Table B-3 costs to derive the Table B-12 costs:

- o A portion of the variable OMP&R costs of each plant is allocated to recreation. The allocation to recreation is in proportion to the quantity of water conveyed through each plant each year for delivery to on-shore recreation developments.
- o That portion of variable plant costs attributable to the initial fill of aqueduct reaches is allocated to the joint capital costs of respective down aqueduct reaches and reservoirs.
- o That portion of costs attributable to evaporation and seepage is allocated to the joint minimum OMP&R costs of respective down-aqueduct reaches and reservoirs.
- o Adjustments are made for additions or withdrawals from storage in aqueduct reservoirs. In years when water is added to storage in aqueduct reservoirs, the cost of conveying this water into storage is charged to the minimum OMP&R costs of the corresponding reservoir. The unit cost is equal to the variable OMP&R unit rate for the year the water is conveyed into storage. In years when storage in aqueduct reservoirs is decreased for the purpose of making deliveries, a credit is applied to the minimum OMP&R costs of the reservoir from which the storage is released. This credit is equal to the number of acre-feet of stor-

age reduction times the variable OMP&R unit rate for the year storage is released.

Table B-13 summarizes actual and projected capital and operating costs of the initial Project conservation facilities to be reimbursed through payments under (1) the Delta Water Charge, (2) Oroville power sales, and (3) San Luis power credits. Included in Table B-13 are credits applied to the reimbursable capital costs of the Project conservation facilities pursuant to negotiated settlements concerning the magnitude of incurred planning costs for the period 1952 through 1978.

Project Water Charges

This section summarizes the redetermination of past and projected components of the Transportation Charge for annual revision of Tables C through G of each water contract. This section also includes the Water System Revenue Bond Surcharge and describes derivation of the unit Delta Water Rates. Equivalent unit charges for each acre-foot of entitlement water service are also summarized herein for each contractor and each aqueduct reach. All of these calculations are diagrammed in the lower half of Figure B-1.

Transportation Charges

The accumulation of allocated costs of each aqueduct reach to each contractor forms the basis for the annual components of the Transportation Charge.

Table B-14 summarizes each contractor's share of the capital costs of aqueduct reaches presented in Table B-10. These amounts are determined by applying proportionate-use ratios set forth in Table B-1 to the costs shown in Table B-10. The resulting allocated costs are set forth in Table C of the respective water supply contracts.

Prepayments of the capital cost component, required under MWDSC's Amendment 7, are included as negative capital costs in Table B-14 and in Table C of MWDSC's Statement of Charges for 1988. Empire West Side Irrigation District and Devil's Den

Water District also prepaid capital costs (see Table B-14 footnotes).

Both Table B-14 and Table C of the six contracts for Project water service below Devil Canyon and Castaic power plants include the capital costs reimbursable under the Devil Canyon-Castaic Contract.

Table B-15 summarizes the capital cost components of the Transportation Charge for each contractor for each year of the Project repayment period, based upon the amortization schedules shown in Figure B-5. These estimated components, subsequently adjusted for prior overpayments or underpayments, are set forth in Table D of the respective water supply contracts. Costs of excess capacity are billed separately and are not included in Table B-15. Table B-15 for the six contractors down-aqueduct from Devil Canyon and Castaic power plants include the debt service payments due under the Devil Canyon-Castaic Contract.

Table B-16A summarizes the minimum OMP&R components of the Transportation Charge for each year of the Project repayment period. These estimated components, subsequently adjusted for prior overpayments or underpayments, are set forth in Table E of the respective contracts. The total amounts shown in Table B-16A are determined by applying the proportionate-use ratios in Table B-2 to the reach costs presented in Table B-11.

Both Table B-16A and Table E for the six contractors down-aqueduct from Devil Canyon and Castaic power plants include the portion of operating costs payable under the Devil Canyon-Castaic Contract.

Under operating agreements with DWR, Kern County Water Agency is billed for any additional operating costs caused by early installation of units by Berrenda Mesa Water District in Las Perillas and Badger Hill pumping plants (see Bulletin 132-71, page 7). Under these agreements, the following minimum OMP&R costs of Reach 31A are assigned directly to the Agency, with the remaining reach costs allocated by application of the proportionate-use ratios:

<u>Year</u>	<u>Direct Charge.\$</u>	<u>Year</u>	<u>Direct Charge.\$</u>
1969	46,510	1981	73,491
1970	46,302	1982	80,870
1971	140,072	1983	88,199
1972	95,016	1984	96,084
1973	72,452	1985	149,883
1974	100,688	1986	123,927
1975	127,456	1987	202,473
1976	138,500	1988	237,887
1977	120,749	1989	233,609
1978	159,728	1990	223,412
1979	121,218	1991	222,139
1980	150,733	1992	225,502
		TOTAL	3,276,900

Table B-16B projects the annual charges for Off-Aqueduct power facilities allocated to each water contractor. These charges are to repay all Off-Aqueduct power costs including bond service, deposits for reserves, operation and maintenance costs, fuel costs, taxes, and insurance. The General Bond Resolution, adopted October 1, 1979, requires that sufficient revenues be collected each year for all of these costs. In addition, an amount totaling 25 percent of the annual bond service is collected each year to ensure that sufficient funds are available to "cover" all annual costs. Any revenues collected and not needed at the end of the year are refunded to the contractors in the next year.

The following tabulation summarizes Off-Aqueduct power facility charges for 1986. The net charges for 1986 are allocated among contractors as shown in Table B-16B.

<u>Item</u>	<u>1986</u>
Charges	(\$)
Reid Gardner	94,075,100
Bottle Rock	25,352,900
South Geysers	<u>7,111,496</u>
Total	126,539,496
Credits	(\$)
Off-Aqueduct	
Power Sales	<u>5,397,287</u>
Total	5,397,287
Net Off-Aqueduct	
Power Charges	\$121,142,209

The following tabulation shows projected charges for Off-Aqueduct power facilities and an amount equal to 25 percent of annual bond service for 1987 and each year thereafter.

YEAR	TOTAL ANNUAL COST.\$	25% OF BOND SERVICE.\$
1987	127,204,487	13,602,183
1988	132,085,731	13,724,356
1989	136,688,386	13,751,768
1990	143,075,584	13,758,345

2014	35,219,728	4,543,501
2015	9,669,198	1,514,913
2016	3,038,000	607,600

The annual charges for Off-Aqueduct power facilities are allocated among contractors in proportion to the electrical energy required to pump entitlement water for the year. The initial allocation for the Statements of Charges is based upon estimates of energy to pump requested entitlement water deliveries. An interim adjustment in the allocation of power costs may be made in May of each year based upon April revisions in water delivery schedules for annual entitlement. A further adjustment is made the following year based upon actual entitlement water deliveries and actual costs for the year.

The energy required to pump each contractor's entitlement water is calculated using the following kWh/acre-foot factors for the pumping plants upstream from the delivery turnout:

Pumping Plant	kWh per acre-foot ¹ at Plant	Cumulative From Delta
North Bay Interim ²	515	515
Barker Slough	223	223
Cordelia-Solano	276	499
Cordelia-Napa	563	786
Banks Delta	296	296
South Bay (including Del Valle)	869	1,165
Dos Amigos	138	434
Las Perillas	77	511
Badger Hill	200	711
Buena Vista	242	676
Wheeler Ridge	295	971
Wind Gap	639	1,610
Edmonston	2,236	3,846
Pearblossom	703	4,549
Oso	280	4,126

¹Includes transmission losses

²In service through 1987

Table B-17 presents a summary of actual and projected total variable OMP&R costs for each acre-foot of water conveyed through each aqueduct pumping plant and power plant for each year of the Project repayment period. These data are derived pursuant to Article 26(a) of the Standard Provisions, which specifies the following procedure for calculating the variable OMP&R component of the Transportation Charge:

- o An annual charge per acre-foot of projected water deliveries to all contractors served from or through each reach is determined so the projected variable OMP&R costs to be incurred for each reach will be returned to the State.
- o The total annual variable OMP&R component for any contractor for a given reach is obtained by multiplying the unit charge associated with that reach by the quantity of water actually delivered to the contractor downstream of the reach.

The data summarized in Table B-17 have been derived by dividing the costs shown in Table B-3 by the quantities of water shown in Table B-6. However, certain costs included in Table B-3 for "extra peaking service", which would otherwise constitute variable OMP&R costs, are assigned directly to contractors requesting this type of service (see Bulletin 132-71, page 21, and Water Service Contractors Council Memo No. 593, July 10, 1970). These costs are excluded from the unit charges shown in Table

- a) Allocated capital costs of transportation facilities are amortized in equal annual installments, unless otherwise noted.
- b) Principal payments on each annual capital cost prior to 1971 delayed until calendar year 1972, except payments for 1963.
- c) Payments on Delta Water Charge only.
- d) Deferred and added to 1964 payment with accrued interest.
- e) Under Article 45 of the contracts for supply of agricultural water, capital costs of transportation facilities allocated to agricultural water supply are amortized via an equivalent unit rate per acre-foot applied to the annual entitlements (Table B-4) through the Project repayment period.
- f) Exception: all principal and interest payments for costs of "Coastal Stub" were deferred until 1976.

B-17. Extra peaking charges for additional power capacity are as shown below:

Year	Agency ¹	Pumping Plant

 AVEKWA=Antelope Valley-East Kern Water Agency

Table B-18 shows the variable OMP&R components of the Transportation Charge for each contractor for each year of the Project repayment period. Table B-18 is developed from the costs per acre-foot shown in Table B-17 and the delivery quantities for each contractor from each reach as shown in Table B-5A, plus any costs for "extra peaking service". These estimated components, subsequently adjusted for prior overpayments or underpayments, are set forth in Table F of the respective water supply contracts.

Table B-19 summarizes the annual Transportation Charges for each contractor (the sums of the corresponding amounts shown in Tables B-15, B-16A, B-16B, and B-18). These estimated payments, subsequently adjusted for prior overpayments or underpayments, are set forth in Table G of the respective water supply contracts. Both Table B-19 and Table G for the six contractors down-aqueduct from Devil Canyon and Castaic power plants include debt service and operating cost payments due under the Devil Canyon-Castaic Contract.

Delta Water Charges

Table B-20A shows the calculation of the Delta Water Rate for the "initial" conservation facilities applicable in 1988, in accordance with the amended Articles 22(e) and 22(g) of all 30 contracts. The top

part of the table shows the calculation of the Delta Water Rate at a Project Interest Rate of 4.713 percent. This Delta Water Rate is used to compute future Delta Water Charges shown in Table B-21 for the 29 long-term water supply contractors who have signed an amendment to exclude interest costs from sale of water system revenue bonds from the Project Interest Rate. One Contractor (City of Yuba City) has not signed the Water System Revenue Bond amendment to exclude interest costs from sale of water system revenue bonds. The Delta Water Rate and future Delta Water Charges to Yuba City in this appendix are based on a Project Interest Rate of 4.817 percent which reflects the \$100 million Water System Revenue Bond sold in May 1987.

Table B-20B shows each component of the 1988 Delta Water Rates from Table B- 20A.

Table B-21 summarizes the annual Delta Water Charge for each contractor. Table B-21 is developed by application of the total rate per acre-foot, as shown in Table B-20A, to the entitlement water for each contractor as shown in Table B-4.

Table B-22 summarizes the surcharge to the Delta Water Charge and the Transportation Capital Cost Component of each contractor. This surcharge is in accordance with an amendment to the water supply contracts to provide for repayment of Water System Revenue Bond financing costs. All long-term water supply contractors except the City of Yuba City have signed this amendment.

Total Water Charges

Table B-23 summarizes total annual charges to each contractor (the sum of the Transportation Charge in Table B-19, the Delta Water Charge in Table B-21, and the Water System Revenue Bond Surcharge in Table B-22).

Equivalent Total Water Charges

Table B-24 presents the Transportation and Delta Water Charges in terms of the equivalent unit charge for each acre-foot of entitlement water now estimated to be delivered to the respective contractors. These equivalent charges if applied to each acre-

foot of entitlement water would provide the same principal sum at the end of the Project repayment period as annual payments to be made under the Delta Water Charge and Transportation Charge, plus interest at the Project Interest Rate. The Table B-24 equivalent unit Delta Water Charges are greater than those in Table B-20A because current estimates of future entitlement water service are appreciably less than the amounts shown in Table A for most contractors.

Equivalent Water Costs by Reach

Table B-25 presents a summary of the equivalent unit transportation cost of conveying entitlement water through respective aqueduct reaches of the Project transportation facilities. These unit costs provide the basis of charges assessed (1) for "extra service" (such as for delivery of entitlements down aqueduct from a contractor's turnout), (2) together with the Delta Water Charge per acre-foot, for surplus water service to entities other than the 30 long term water supply contractors, and for (3) "wheeling service" to entities other than the long-term water supply contractors. A discussion of wheeling services in the California Aqueduct follows at the end of this Appendix B text.

The cumulative unit conveyance costs shown for reaches in Table B-25 do not necessarily equal the equivalent unit Transportation Charges to contractors served from such reaches. This is because the unit charges of Table B-24 account for the rate of water demand buildup and cost allocation factors of the individual contractors, whereas the unit costs of Table B-25 meld the effect of the respective buildups and allocation criteria of all contractors whose entitlements are conveyed through a given reach. Also, Table B-25 does not include the Water System Revenue Bond financing costs shown in Table B-22.

Table B-26 presents DWR's initial projections of annual construction capital costs of the East Branch Enlargement facilities for each aqueduct reach. These projections will be redetermined in future bulletins to include:

- o a reallocation of costs of constructing the present East Branch facilities between Alamo Powerplant and Silverwood Lake;
- o a reallocation of costs of Silverwood Lake to reflect additional use as a result of East Branch enlargement operation;
- o reallocation of costs of San Bernardino Tunnel to reflect redistribution of flow capacities necessary for the East Branch enlargement facilities; and
- o actual construction costs of the enlargement.

These costs will be recovered with interest through payments by the seven Southern California water contractors participating in the enlargement, in accordance with their amended water supply contracts.

Table B-27 lists the projected minimum OMP&R costs for each reach of the enlargement to be repaid by the seven Southern California contractors participating in the East Branch Enlargement.

Table B-28 summarizes each contractor's share of the estimated capital costs of the East Branch Enlargement.

Table B-29 summarizes the annual capital cost components of the East Branch Enlargement Transportation Charge for each participating contractor.

Table B-30 summarizes the minimum OMP&R components of the East Branch Enlargement Transportation Charge for each participating contractor for each year of the Project repayment period.

Table B-31 summarizes the annual East Branch Enlargement Transportation charges for each participating contractor (the sums of the corresponding amounts shown in Tables B-29 and B-30).

Surplus Water Service

Surplus water has been delivered from 1968 through 1986, except for the drought year of 1977.

Table B-32 shows the quantities of surplus water delivered to long-term contractors during the period of May 1, 1973 through December 31, 1986.

Table B-33 shows the costs for power that have been incurred by the State at each pumping plant associated with surplus water deliveries shown in Table B-32.

Table B-34 shows the actual charges to each contractor for delivery of the surplus water quantities shown in Table B-32. The method of determining these charges is discussed in Bulletin 132-77, page 117.

Wheeling Services in the California Aqueduct

At times the SWP has additional capability to move non-Project water through the California Aqueduct. Services provided include pumping, transportation (wheeling) and, if needed, storage in San Luis Reservoir. The SWP has provided wheeling, through separate annual agreements, to temporary federal water contractors; the water and electrical power are provided by the CVP. In 1975, 20-year wheeling agreements were signed that provide for wheeling CVP water through SWP facilities to the Cross Valley Canal in Kern County. Additional agreements provide for storage, generally in cases when water cannot be wheeled directly to the user on a demand basis.

Wheeling and storage rates are developed for the most part from information shown in Appendix B. Wheeling rates are calculated from the Appendix B tables used in developing contractor charges for the year the water is wheeled. For example, wheeling rates for 1987 were developed from Appendix B tables in Bulletin 132-86.

Annual wheeling rates are developed from four sources:

- o Table B-25: Capital and Minimum OMP&R Equivalent Unit Transportation Costs of water for the Aqueduct reaches used;
- o Table B-20B: that portion of the Delta Water Rate associated with capital and minimum costs of California Aqueduct reaches 1, 2A, 2B, and 3. For SWP purposes, a portion of costs for these reaches is allocated to SWP contractors as part

of the Delta Water Rate. These costs are added to wheeling rates because they reflect the total costs of constructing and maintaining these reaches, irrespective of the SWP repayment system;

- o Variable replacement costs: DWR charges a fixed rate for every acre-foot of water going through SWP pumping plants to provide funds for eventual replacement of equipment. Wheeling is through the Banks Delta Pumping Plant and sometimes through the Dos Amigos Pumping Plant. For 1988, the rates for each plant, respectively, are \$0.26 and \$0.28. These rates are revised periodically; and
- o Fish agreement costs: at the end of 1986, DWR and the Department of Fish and Game entered into an agreement to provide a means to offset specific fish losses at the Banks Delta Pumping Plant. Specific fish losses are calculated each year; these calculations are used to develop payment amounts for a fund to pay fishery program costs. These costs are then recalculated on an acre-foot basis by DWR, and reallocated to water users based on acrefeet-of pumped water. Wheeling charges are based on estimates of the maximum likely fish losses associated with pumping in the Delta during the year.

During May, June, and July, the SWP operates under Delta export limits as a condition of SWP water right permits. When deliveries from the California Aqueduct are requested during key summer months, some of the Cross Valley Canal Agreement or annual wheeling contractors may want to use water stored in the SWP share of San Luis Reservoir.

Advance deliveries are made from SWP water stored in San Luis Reservoir, provided that the USBR agrees to replace the water later in the year. The San Luis Reservoir use charge is equal to the San Luis Reservoir portion of the Delta Water Rate as shown in Table B-20B, plus the estimated value of the net energy costs to replace water in the San Luis Reservoir.

For 1988, the basic wheeling charge to Reach 12E and to Reach 31A is shown in the following table:

<u>California</u> <u>Aqueduct</u>	<u>Cumulative Charges</u> <u>per acre-foot, \$</u>
Reach 1	6.49
Reach 2A	8.84
Reach 2B	9.90
Reach 3	10.79
Reach 4	12.96
Reach 5	13.80
Reach 6	14.07
Reach 7	15.01
Reach 8C	15.08
Reach 8D	15.68
Reach 9	16.17
Reach 10A	16.70
Reach 11B	17.35
Reach 12D	17.97
Reach 12E	18.54
Reach 31A*	23.15

*to the Green Valley Water District

These rates do not include charges for the following items and may increase, as necessary, due to:

- o a charge to offset direct fish losses associated with pumping at Banks Delta Pumping Plant (the 1987 Fish Agreement rate was set at \$1.00 per acre-foot);
- o a charge of \$5.05 per acre-foot for use of the State's share of San Luis Reservoir, if releases from the State's share of the reservoir is required;
- o any identified increase in power operations as a result of the use of the State's share of the San Luis Reservoir;
- o additional power scheduling and transmission charges if water is wheeled through Las Perillas Pumping Plant; and
- o any other identified increase in cost that would otherwise have to be borne by the SWP contractors as a result of the wheeling.

- b) Power costs for the period 1968 through 1987 are for an interim facility.
c) The costs of Del Valle Pumping Plant are combined with those of South Bay Pumping Plant to simplify the cost allocations.

TABLE B-4: ANNUAL ENTITLEMENTS

(in acre-feet)

- a) From Tables A and Article 6(a) of water supply contracts as of June 30, 1986.
- b) Entitlements for the South Bay area were supplied by non-Project water for the period June 1962 through November 1967. Actual delivery quantities of Project water are shown for 1967.
- c) District's Table A quantities exclude amounts during the period 1968 through 1987 that are assumed to be supplied by non-Project water.

TO PROJECT WATER (a)

(in acre-feet)

d) In accordance with the Exchange Agreement between the noted agencies, MWDSC assumed responsibility for payment of variable OMP&R costs on the exchange water in reaches beyond Reach 22B, and Desert Water Agency and Coachella Valley Water District for such costs from the Delta through Reach 22B. The adjustment in deliveries shown in Column 50 provides for compliance with provisions for the repayment of costs under the Agreement.

EACH AQUEDUCT REACH TO EACH CONTRACTOR (a)

(in acre-feet)

Notes: "Reservoir Storage Changes" include projected net annual storage accretions (positive values) and withdrawals (negative values) for all down-aqueduct reservoirs of the project transportation facilities. Those variable OMP&R costs (Table B-12) that are allocable to storage accretions are assigned to the minimum OMP&R costs of the respective reservoirs.

"Water Supply Delivery" or "Deliveries, Water Supply", include certain hypothetical quantities to facilitate cost allocations for those years when deliveries are made from net annual storage withdrawals. The net annual amounts of storage withdrawals are hypothetically added to the actual amounts conveyed from the Delta to the reservoirs ... since deliveries made from storage withdrawals bear the same variable OMP&R costs per acre-foot as if the deliveries were actually conveyed that year, from the Delta. The hypothetical increases in the deliveries made from reservoir storage withdrawals are offset by equal credits to the minimum OMP&R costs of the respective reservoirs. Thus, the variable OMP&R components per acre-foot (Table B-17) may be applied to the total annual quantities delivered either from aqueduct reservoir storage or from the Delta.

"Conservation Water" includes initial fill water, operational losses, and net annual storage changes associated with San Luis Reservoir (and the portion of the aqueduct that is allocated to conservation). The same allocation procedure outlined above for transportation facilities applies also to conservation facilities ... expect that the hypothetical cost increases are added to the variable OMP&R cost to be reimbursed through the Transportation Charge, and deducted from the minimum OMP&R costs to be reimbursed through the Delta Water Charge.

AND POWER RECOVERY PLANT OF PROJECT TRANSPORTATION FACILITIES (a)

(in acre-feet)

- a) Miscellaneous project receipts that are applied for accounting purposes to reduce the capital costs of the particular facilities.
b) These allowances are included for planning the future financial program, but not for determining current water charges. The costs shown in this appendix are based on prices prevailing on December 31, 1986.
c) See Table B-8.
d) See Table B-9.
e) See Table B-13. A portion of these costs will be offset by power generation sales and credits.
f) See Table B-10.
g) See Table 20, Chapter VII.

a) Approximate only, not to be construed as invoice amounts.

b) Not a SWP water supply contractor. A delivery structure was constructed on the Thermalito Power Canal at the District's expense as part of a water exchange agreement.

c) Not a SWP water supply contractor, but has contracted for surplus water.

- a) Costs for the period 1968 through 1987 are for an interim facility.
b) The relatively minor costs of Del Valle Pumping Plant have been combined with those of South Bay Pumping Plant to simplify the allocation procedures.
c) Includes extra peaking costs assigned directly to Kern County Water Agency and to Tulare Lake Basin Water Storage District. Refer to Appendix B text discussion of Table B-17 under "Project Water Charges".

d) These values represent a proportionate allocation of the total variable OMP&R costs of pumping and power recovery plants (Table B-3) associated with net annual withdrawals from reservoir storage for the Project transportation facilities. The allocation is determined annually by applying the following ratio, calculated from the data shown in Table B-6: "Reservoir Storage Changes" (withdrawals, as a positive value) conveyed through each plant, in acre-feet, divided by "Total" annual quantity conveyed through each plant, in acre-feet. The costs so determined are accumulated for all upstream plants for each year, for each respective reservoir.

**TABLE B-12: VARIABLE OMP&R COSTS TO BE REIMBURSED THRU
VARIABLE OMP&R COMPONENT OF TRANSPORTATION CHARGE**

- a) Reimbursed through the capital cost component of the Delta Water Charge.
b) Negotiated settlements as to the magnitude of SWP planning costs from 1952 through 1978.
c) Reimbursed through the minimum OMP&R component of the Delta Water Charge. Credits for San Luis power generation are reflected in these net costs.
d) Revenues credited through the capital cost component of the Delta Water Charge.
e) Revenue credits through the minimum OMP&R component of the Delta Water Charge.
f) Under amendments of Articles 22(e) and 22(g), planning and preoperating costs of additional Project conservation facilities incurred through the previous year (1986) are reflected in the Delta Water Charge.

a) Unit rates as shown constitute the rate for the indicated pumping plants, power plants, and reservoirs. Cumulative unit rates as shown constitute the total rate, cumulative from the Sacramento - San Joaquin Delta, applicable to deliveries from or downstream of the indicated pumping plants and power plants. Excludes extra peaking service costs.

OF TRANSPORTATION CHARGE (a)

(in dollars per acre-foot)

b) For the period 1968 through 1987, rates are for an interim facility.

c) The relatively minor costs of Del Valle Pumping Plant have been combined with those of South Bay Pumping Plant to simplify the allocation procedure.

TABLE B-17: UNIT VARIABLE OMP&R COMPONENT

(in dollars per acre-foot)

TABLE B-20A: CALCULATION OF DELTA WATER RATES

(Values in Millions of Dollars (\$) or Millions of Acre-Feet (AF) Discounted to 1987)

Procedure	Capital Cost Component (1)		Minimum Operation, Maintenance, Power and Replacement Component(a) (2)		Total Delta Water Rate (3)	
Calculation at 4.713 Percent per Annum for All Contractors Except the City of Yuba City						
<u>Commencing in 1988</u>						
Total Costs of "Initial" Project Conservation Facilities to be Reimbursed and Project Water Entitlements during the Project Repayment Period.	\$1,865.18(b)	126.21 AF	\$990.33(c)	126.21 AF	\$2,855.51	126.21 AF
<u>Less</u> , Project Power Revenues to be Realized During the Project Repayment Period.	-762.12		-250.95		-1,013.07	
<u>Less</u> , Delta Water Charges Paid and Project Water Entitlements, Prior to 1988.	-436.77(d)	-47.64 AF	-186.84	-47.64 AF	-623.61	-47.64 AF
TOTAL	\$ 666.29	78.57 AF	\$552.54	78.57 AF	\$1,218.83	78.57 AF
Rate Applicable 1988 through 2035	\$8.48 per acre-foot		\$7.03 per acre-foot		\$15.51 per acre-foot	
<u>Calculation at 4.817 Percent per Annum for the City of Yuba City</u>						
<u>Commencing in 1988</u>						
Total Costs of "Initial" Project Conservation Facilities to be Reimbursed and Project Water Entitlements during the Project Repayment Period.	\$1,902.04(b)	125.28 AF	\$981.79(c)	125.28 AF	\$2,883.83	125.28 AF
<u>Less</u> , Project Power Revenues to be Realized during the Project Repayment Period.	-761.82		-248.69		-1,010.51	
<u>Less</u> , Delta Water Charges Paid and Project Water Entitlements, Prior to 1988.	-440.26(d)	-47.98 AF	-187.75	-47.98 AF	-628.01	-47.98 AF
TOTAL	\$ 699.96	77.30 AF	\$545.35	77.30 AF	\$1,245.31	77.30 AF
Rate Applicable 1988 through 2035	\$9.06 per acre-foot		\$7.05 per acre-foot		\$16.11 per acre-foot	

- Considering that all operating costs of Project Conservation Facilities will not vary with annual amounts of Project water delivered, and therefore are properly classified as "Minimum" OMP&R Costs.
- Including net credits of \$4,850,000 for settlements as to the magnitude of Project Capital costs incurred prior to December 31, 1960, and net credits of \$6,678,320 for settlement as to the magnitude of Project Capital costs incurred during the 1961 through 1978 period.
- Includes conservation power costs and credits at San Luis.
- Applying all Delta Water Charges paid prior to 1970 to reimburse Capital costs (the charge was not divided into components until 1970).

TABLE B-20B: DELTA WATER RATES BY FACILITY

Item	Rate per Acre-Foot		
	Capital Cost Component	Minimum Operation, Maintenance, Power and Replacement Component	Total Delta Water Rate
<u>Initial Conservation Facilities</u>			
Oroville Division			
Water Supply and Power Costs(a)	\$15.75/AF	\$7.18/AF	\$22.93/AF
Less, Oroville Power Revenues	-9.70	-3.19	-12.89
Subtotal	6.05	3.99	10.04
Delta Facilities (b)	2.19	1.78	3.97
California Aqueduct, portion			
Reach 1	0.98	1.26	2.24
Reach 2A	0.60	0.20	0.80
Reach 2B	0.29	0.07	0.36
Reach 3	0.20	0.07	0.27
Subtotal	2.07	1.60	3.67
San Luis Facilities	3.01	2.04	5.05
Planning and Preoperating Costs through 1986	0.72	0.00	0.72
Less, Capital Cost Credits	-0.43	0.00	-0.43
Less, Delta Water Charges Paid Prior to 1988	-5.13	-2.38	-7.51
Rate Applicable 1988 through 2035	\$ 8.48/AF	\$ 7.03/AF	\$15.51/AF

a) Includes revenue received from non-contractors.

b) Includes (1) Delta Facility planning costs, (2) Delta Studies costs, and (3) Suisun Marsh Facility costs.

- a) Representative of transportation unit costs only; does not include a unit cost of conservation. The Delta Water Rate should be added to these values in order to approximate total unit costs at canalside. Includes surplus water prior to May 1, 1973.
- b) Hypothetical charges which, if assessed on all entitlement water delivered to date, all surplus water delivered prior to May 1, 1973, and all entitlement water now estimated to be delivered during the remainder of the Project repayment period (Table B-5B), would provide a sum at the end of the period financially equivalent to all Transportation Charges required under the water supply contract, considering interest at the Project Interest Rate of 4.713 percent per annum.

a) Under Article 49(d)(4)(A) of its contract, San Bernardino Valley Municipal Water District elected to pay a portion of its allocated costs of East Branch Enlargement in advance rather than participate in repayment of Series A Water System Revenue Bonds. This election made via a letter agreement signed June 1, 1987, calls for payment of \$1,479,000 on January 1, 1988, \$463,000 on July 1, 1988, and \$231,000 on January 1, 1989. San Bernardino Valley Municipal Water District will consider similar advance payments in lieu of participating in subsequent revenue bond financing of remaining East Branch Enlargement costs.

a) District merged with Tulare Lake Basin Water Storage District effective January 1, 1981.

b) May through December only.

c) Includes unscheduled water (called extra surplus water in 1980).

d) Includes 12,270 acre-feet of 1985 surplus water carried over and delivered during January and February 1986. Also includes 22,034 acre-feet of unscheduled water.

e) Revised and corrected from Bulletin 132-86 to reflect 5,662 acre-feet of 1978 exchange water reclassified as agricultural surplus water.

		B-34	Power, Replacement and Administrative Charge for Surplus Water Deliveries	B-27	none	B-27	B-27	B-27	B-27	B-27	B-27	B-27	none	none

* Appendix B tables for Bulletin 132-82 are published under separate cover.

CONVERSION FACTORS

Quantity	To Convert from Metric Unit	To Customary Unit	Multiply Metric Unit By	To Convert to Metric Unit Multiply Customary Unit By
Length	millimetres (mm)	inches (in)	0.03937	25.4
	centimetres (cm) for snow depth	inches (in)	0.3937	2.54
	metres (m)	feet (ft)	3.2808	0.3048
	kilometres (km)	miles (mi)	0.62139	1.6093
Area	square millimetres (mm ²)	square inches (in ²)	0.00155	645.16
	square metres (m ²)	square feet (ft ²)	10.764	0.092903
	hectares (ha)	acres (ac)	2.4710	0.40469
	square kilometres (km ²)	square miles (mi ²)	0.3861	2.590
Volume	litres (L)	gallons (gal)	0.26417	3.7854
	megalitres	million gallons (10 ⁶ gal)	0.26417	3.7854
	cubic metres (m ³)	cubic feet (ft ³)	35.315	0.028317
	cubic metres (m ³)	cubic yards (yd ³)	1.308	0.76455
	cubic dekametres (dam ³)	acre-feet (ac-ft)	0.8107	1.2335
Flow	cubic metres per second (m ³ /s)	cubic feet per second (ft ³ /s)	35.315	0.028317
	litres per minute (L/min)	gallons per minute (gal/min)	0.26417	3.7854
	litres per day (L/day)	gallons per day (gal/day)	0.26417	3.7854
	megalitres per day (ML/day)	million gallons per day (mgd)	0.26417	3.7854
	cubic dekametres per day (dam ³ /day)	acre-feet per day (ac-ft/day)	0.8107	1.2335
Mass	kilograms (kg)	pounds (lb)	2.2046	0.45359
	megagrams (Mg)	tons (short, 2,000 lb)	1.1023	0.90718
Velocity	metres per second (m/s)	feet per second (ft/s)	3.2808	0.3048
Power	kilowatts (kW)	horsepower (hp)	1.3405	0.746
Pressure	kilopascals (kPa)	pounds per square inch (psi)	0.14505	6.8948
	kilopascals (kPa)	feet head of water	0.33456	2.989
Specific Capacity	litres per minute per metre drawdown	gallons per minute per foot drawdown	0.08052	12.419
Concentration	milligrams per litre (mg/L)	parts per million (ppm)	1.0	1.0
Electrical Conductivity	microsiemens per centimetre (uS/cm)	micromhos per centimetre	1.0	1.0
Temperature	degrees Celsius (°C)	degrees Fahrenheit (°F)	(1.8 × °C) + 32	(°F - 32)/1.8
